# **Report on State Finances**

# 2010-11

**New South Wales** 

# About this Report

The 2010-11 New South Wales Report on State Finances includes:

- the audited Consolidated Financial Statements of the General Government and Total State Sectors and
- the Outcomes Report on Government Finances for the general government, public non-financial corporation, public financial corporation and the non-financial public sectors, prepared in accordance with the Uniform Presentation Framework adopted by all Australian governments.

The Consolidated Financial Statements of the General Government and Total State Sectors show the financial position and the result of operations of the State in comparison to the previous year. It also includes a full set of note disclosures required by Australian Accounting Standards. Included in this report are budget estimates and variance information.

The Outcomes Report allows readers to compare the financial results for New South Wales with other States.

These reports and associated commentary provide a comprehensive review of the State's financial position and achievements against the fiscal principles outlined in the *Fiscal Responsibility Act 2005*.

On 8 October 2010 the Public Accounts Committee of Parliament published recommendations to improve the quality and timeliness of financial reporting. The Government is implementing a series of reforms to achieve this important outcome.

# Highlights

## **General Government Sector**

- A Budget surplus for 2010-11 of \$1,340 million or \$567 million better than the original Budget estimate and a \$76 million improvement on the estimate contained in the 2011-12 Budget. A surplus of \$240 million after removing Australian Government economic stimulus. On a cash basis the 2010-11 result was a deficit of \$1,035 million.
- Total expenses were \$55,804 million or \$1,092 million lower than the original Budget estimate. This reflected:
  - a budgeted payment of \$350 million for South West Rail Link works being brought forward and paid in 2009-10
  - a reduction in outstanding workers compensation and public liability claims following a revision to actuarial assumptions of \$192 million, as well as changes in accounting policies for land transfers reducing expenses by \$89 million and
  - underspending on a range of government programs.
- Total revenues were \$57,144 million or \$525 million lower than the original budget estimate. This reflected:
  - lower Commonwealth grants of \$1,125 million
  - higher taxation revenues of \$201 million and
  - higher dividends and tax equivalent payments of \$277 million.
- General Government Sector net debt fell to \$7,952 million or 1.8 per cent of GSP in June 2011.
   The reduction in net debt reflects the impact of the proceeds from the sale of the electricity retail businesses.
- General Government Sector capital expenditure for 2010-11 was \$7,047 million.

#### **Total State Sector**

- Net worth of the Total State Sector grew by \$10,395 million to \$163,287 million for the year ended June 2011. This was driven by an operating surplus of \$4,733 million and asset revaluations of \$4,989 million.
- During the year the State entered into Generation Trading Agreements with Origin and TRUenergy (referred to as Gentraders) to sell the trading rights of Eraring, Shoalhaven, Mount Piper and Wallerawang power stations The Gentraders paid a total of \$1,321 million in deposits to the State towards future agreed charges. The State also sold its electricity retail businesses to Origin Energy and TRUenergy for \$3,780 million. The transactions resulted in an accounting gain of \$3,249 million.
- The State sold Waste Recycling and Processing Corporation trading as WSN Environmental Solutions (WSN) to SembSita Australia Pty Ltd for \$234 million. The result from the sale was an accounting loss of \$20 million in 2010-11.
- Despite a cash deficit of \$4,543 million, Total State Sector net debt fell by \$918 million to \$32,428 million reflecting the impact of the electricity transactions. As a share of GSP net debt fell from 8.2 percent in June 2010 to 7.5 percent in June 2011.
- Total State Sector net financial liabilities grew marginally to \$89,547 million reflecting higher employee benefits and insurance liabilities, partly offset by lower net debt and superannuation obligations.

Throughout this Report NSW Treasury has estimated 2010-11 Gross State Product (GSP). The Australian Bureau of Statistics has yet to publish its 2010-11 estimate of GSP.

## Review of Financial Performance

## **Budget Result**

The Budget Result refers to the Net Operating Balance for the General Government Sector. The Budget Result for 2010-11 is a surplus of \$1,340 million.

	Budget	Actual	Variation
	\$m	\$m	\$m
Total Revenues	57,669	57,144	(525)
Total Expenses	56,896	55,804	(1,092)
Budget Result	773	1,340	567

The Budget Result for 2010-11 compares to the original estimate of \$773 million (see General Government Sector Statement Operating Statement pages 5-6 and 5-153). The outcome also represents an improvement of \$76 million on the estimate for 2010-11 contained in the 2011-12 Budget Papers. A summary of the result compared to the Budget (as presented in the 2010-11 Budget Papers) is outlined below and in Note 38 to the audited Consolidated Financial Statements.

#### Revenues

Revenues were \$525 million or 0.9 per cent below budget.

- Commonwealth grants were \$1,125 million less than budget. GST revenue grants were \$881 million lower than expected due to weaker spending by consumers. Funding for Commonwealth national agreements and national partnerships was \$198 million below budget due to delays in payments from the Commonwealth and timing adjustments associated with various programs.
- Taxation revenues were above budget by \$201 million primarily due to higher motor vehicle weight tax funding the Metropolitan Transport Blueprint (\$53 million), higher payroll tax reflecting slightly greater employment growth (\$68 million) and higher contributions to Electricity Tariff Equalisation Fund associated with lower wholesale electricity prices (\$177 million). These increases were partly offset by lower Government Guarantee Fees (\$100 million) reflecting a change in methodology.
- Dividends and tax equivalent payments were above budget by \$277 million largely due to higher
  profitability in the energy sector along with an increase in income tax equivalent payments driven by
  gains on sale of the retail arms of the electricity distribution businesses.
- Investment revenue exceeded budget by \$143 million, largely due to higher cash balances associated with the proceeds from the electricity transaction.

## **Expenses**

Total expenses in 2010-11 were \$1,092 million or 1.9 per cent below budget.

- A budgeted payment of \$350 million for South West Rail Link works in 2010-11 was brought forward and paid in 2009-10
- Outstanding claims liabilities were revised down following changes in actuarial assumptions for
  workers compensation (\$135 million) and favourable claims experience on public liability (\$57 million)
  and the Home Warranty Insurance Schemes (\$19 million). This is offset by increased workers
  compensation claims in NSW Police as the flow on effect of the NSW Police Death and Disability
  Scheme (\$49 million)
- Costs associated with the privatisation of government assets were lower than expected (\$44 million)
- The uptake of the Energy Rebate Scheme was lower than expected (\$45 million) and funding was carried forward to future years for various programs by the Department of Trade and Investment, Regional Infrastructure and Services the Country Towns Water Supply and Sewerage Program (\$25 million) and the Major Investment Attraction Scheme (\$19 million)
- Land transfers to other government bodies were accounted for as an equity transfer rather than expenses (\$89 million)
- Savings in NSW Health employee related costs, depreciation expense and telecommunication costs partly offset by increased costs for electricity, Visiting Medical Officers, grants and cross-border flows (\$71 million)
- Expenditure on the Comprehensive Housing Supply and Priority Infrastructure Fund was less than
  expected due to grants being withheld from local government, pending the Independent Pricing and
  Regulatory Tribunal's determination (\$36 million).

## **Further Budgetary Information**

A detailed analysis of variances between the Budget Result and the estimate in the 2010-11 Budget Papers is also included in Note 38 of the audited Consolidated Financial Statements (Page 5-153).

## **Total State Sector Statement of Comprehensive Income**

The 2010-11 Total State Sector Statement of Comprehensive Income is prepared in accordance with AASB 1049 Whole of Government and General Government Sector Financial Reporting.

The statement reports several key aggregates:

- Net Operating Balance
- Operating Result
- Comprehensive Result
- Net Lending/Borrowing

The statement of comprehensive income is located at Pages 5-6 and 5-7 of the Consolidated Financial Statements.

Note 37 to the report includes information on the convergence differences between the AASB 1049 aggregates and the GFS equivalents.

The following analysis is for the Total State Sector. It compares actual results for 2010-11 and 2009-10.

## **Net Operating Balance**

The Net Operating Balance for the Total State Sector was a surplus of \$1,249 million compared to a \$3,908 million surplus in 2009-10. The Net Operating Balance is also referred to as the net result from transactions (total revenues less total expenses).

#### Revenue

Total revenues for 2010-11 were \$68,644 million, an increase of 4.4 per cent over 2009-10.

Revenues include commonwealth grants, taxes, fines, fees, sales of goods and services and interest and dividends.

Note 2 to the Consolidated Financial Statements details the revenues by class and their components.

The following revenue areas had significant movement in 2010-11 compared with 2009-10:

- Taxation up \$1,290 million
- Sale of goods and services up \$2,153 million and
- National Agreements and National Partnership Payments down \$1,824 million.

The rise in taxation includes an increase of \$181 million in stamp duty on property transfers mainly from large commercial transactions. Payroll tax rose by \$243 million reflecting employment growth and rise in average wages.

The presentation of revenues from sale of goods and services has been affected by the sale of the retail electricity operations (reported as discontinuing operations), which occurred four months before reporting date. After adjusting for this transaction, sale of goods and services grew by \$628 million or 3.1 per cent as follows:

Sale of goods and services	2010-11 \$m	2009-10 \$m	Movement \$m
From continuing operations	17,809	15,656	2,153
From discontinuing operations	2,925	4,450	(1,525)
Total	20,734	20,106	628

In December 2008, the Commonwealth and all States and Territories (the States) signed the Intergovernmental Agreement on Federal Financial Relations (IGA) establishing a new framework for Federal financial relations. The IGA sets out a framework for Commonwealth payments to the States. There are three types of payments: general purpose payments (mainly GST); National Agreements (NAs) and National Partnership (NP) payments.

Total Commonwealth grants revenue fell by 5.1 per cent compared to 2009-10. GST revenue provided to New South Wales increased by \$481 million, offset by lower NP payments.

Specific purpose payments under the NAs increased by \$306 million in 2010-11 for areas including Healthcare, Education, Skills and Workforce Development, Disability, Affordable Housing and Home and Community Care. Commonwealth National Partnership payments to NSW were \$2,130 million lower in 2010-11. The decrease principally reflects the winding down of the Economic Stimulus funding.

Figure 5 Total State Sector Revenue 2010-11 (2009-10 in brackets) Commonwealth 36.5% (40%)**Taxation** 28.1% (27.4%)Sale of Goods and Other Revenues Services 9.5% 25.9% (8.8%)(23.8%)

## **Expenses**

Total State Sector expenses grew by \$4,923 million or 7.8 per cent in 2010-11.

Employee expenses (excluding superannuation) grew by 5.5 per cent during 2010-11 to \$28,142 million. The growth in employee expenses is a function of increases in wage rates, employee numbers and workforce pay-grade creep.

Depreciation expense rose by \$378 million or 6.8 per cent during 2010-11 due to the expansion in the capital stock associated with high levels of capital expenditure and asset revaluations.

The presentation of other operating expenses has also been affected by the sale of the retail electricity operations (reported as discontinuing operations), which occurred four months before reporting date. After adjusting for this transaction, other operating expenses grew by \$715 million or 3.6 per cent as follows:

Other operating expenses	2010-11 \$m	2009-10 \$m	Movement \$m
From continuing operations	17,894	16,001	1,893
From discontinuing operations	2,575	3,753	(1,178 <u>)</u>
Total	20,469	19,754	715

Grants and subsidies rose overall by \$561 million or 7.3 per cent in 2010-11. This includes the transfer of properties valued at \$946 million (2009-10 nil) to community housing providers partly offset by \$435 million lower First Home Buyer grants in 2010-11.

## **Operating Result**

The Operating Result comprises the Net Operating Balance adjusted for 'Other Economic Flows included in the Operating Result'. Note 4 to the Consolidated Financial Statements details the impact of other economic flows on the result.

The Operating Result for 2010-11 is a surplus of \$4,733 million. It mainly comprises the net operating surplus of \$1,249 million (explained above) adjusted for the net gain of \$3,311 million resulting from the sale of the retail electricity operations and WSN.

## **Comprehensive Result**

The Comprehensive result comprises the operating result adjusted for other economic flows direct to equity. The 2010-11 comprehensive result was a surplus of \$10,395 million. It mainly comprises the \$4,733 million operating surplus, \$4,989 million increment from asset revaluations and \$425 million actuarial gain from superannuation. Explanations of the superannuation gain and asset increments can be found in the Total State Sector Accounts in Note 24 'Superannuation Provisions' and Note 15 'Property Plant, and Equipment'.

## Net Lending/(Borrowing)

The net lending result represents the financing requirement of the government, calculated taking into account both recurrent and capital transactions.

In 2010-11 the net borrowing result was \$6,346 million, reflecting the impact of the \$14,868 million state capital program.

### **Total State Sector Statement of Financial Position**

Total State Sector Net Worth was \$163,287 million in June 2011, an increase of \$10,395 million or 6.8 per cent on the previous year.

The increase in Net Worth is mainly due to the growth in non-financial assets of \$10,644 million.

The General Government Net Worth of \$163,287 million is the same as the Total State Sector because the general government sector records an equity investment in the net assets of the Public Non-financial Corporation (PNFC) and Public Financial Corporation (PFC) sectors.

## **Non-Financial Assets**

Non-financial assets are the physical assets of the State such as public schools, hospitals, roads, bridges, transport, public housing and sporting facilities, as well as the infrastructure of the State's commercial authorities such as electricity power stations and distribution assets, dams and water pipelines, and ports infrastructure.

The State's non-financial assets were valued at \$252,834 million at 30 June 2011, an increase of \$10,644 million on the previous year. This included an increase in investments in property and infrastructure of \$10,212 million, an increase in intangibles of \$333 million and an increase in the valuation of forests of \$90 million.

Capital expenditure on property and infrastructure in 2010-11 included investments in:

educational facilities \$1,905 million
 hospitals and equipment \$816 million
 roads \$2,573 million
 public housing \$1,214 million
 public transport \$2,138 million
 energy infrastructure \$3,363 million
 water infrastructure \$1,054 million

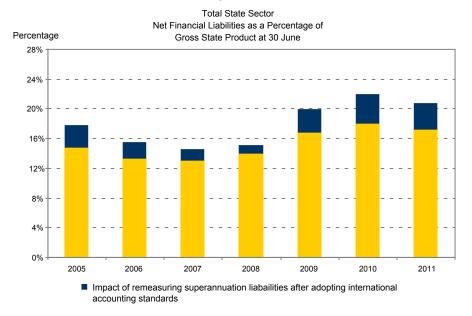

Several agencies performed cyclical revaluations of their property, plant and equipment during the financial year. As a result, the value of these assets increased by \$5 billion. Refer to Note 15 'Property, Plant and Equipment' and Note 16 'Intangibles' for further information on the annual movements in these asset classes.

#### **Net Financial Liabilities**

Net Financial Liabilities (NFL) reflect the financial obligations of the Government. They comprise net debt, unfunded superannuation and other employee provisions, insurance obligations and other liabilities, net of receivables and other financial assets.

Total State Sector NFL as a share of gross state product (GSP) fell to 20.7 per cent in June 2011 from 21.9 per cent in June 2010. (Refer Figure 6). In dollar terms, NFL remained stable at around \$89 billion.

Figure 6

Net Financial Liabilities (NFL) comprise:

	June 2011 \$m	June 2010 \$m
Net Debt	32,428	33,346
Superannuation Liabilities	34,054	34,530
Employee Provisions	13,737	12,944
Insurance Obligations	6,833	6,281
Other Net Liabilities	2,495	2,197
Net Financial Liabilities	89,547	89,298

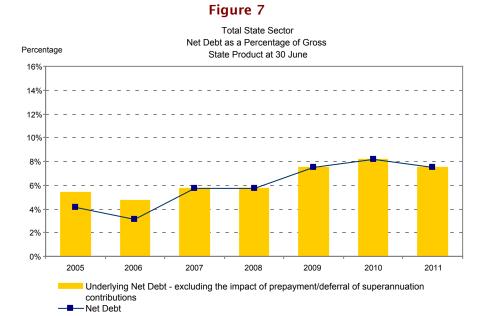

## **Net Debt**

Net Debt comprises borrowings, advances received and deposits held, less cash and cash equivalent assets, financial assets and advances paid.

Total State Sector Net Debt fell by \$918 million to \$32,428 million for the year ended 30 June 2011.

During 2010-11, gross debt increased by \$4,332 million and cash and investments increased by \$5,250 million.

The Net Debt of the State as a percentage of GSP fell from 8.2 per cent in June 2010 to 7.5 per cent June 2011 (Refer Figure 7).

## **Superannuation Liabilities**

Superannuation liabilities represent the actuarially assessed obligations for past and present employees less the net market value of scheme assets set aside to meet these obligations. During 2010-11, net unfunded superannuation liabilities decreased by \$476 million to \$34,054 million. This reduction in unfunded liabilities over the twelve months to 30 June 2011 is largely explained by the effect of several factors:

- an increase in the liability discount rate from 5.17 per cent to 5.28 per cent and
- higher than expected fund earnings for State Super of 8.7 per cent and EISS of 11.1 per cent.

Employer and employee assets in the defined benefits schemes were \$31,870 million at 30 June 2011.

## **Other Employee Provisions**

Other employee provisions include annual and long service leave and self funded obligations for workers compensation.

The liabilities grew by 6.1 per cent to \$13,737 million in June 2011.

## **Insurance Obligations**

These liabilities primarily comprise obligations of the Treasury Managed Fund (excluding workers compensation), liabilities for dust disease claims, for lifetime care and support for victims with catastrophic injuries from motor vehicle accidents and closed insurance schemes such as the Transport Accident Compensation Fund (old third party scheme).

Insurance liabilities grew by 8.8 per cent to \$6,833 million in June 2011. The growth has been affected by the impact of emerging claims in the relatively new Lifetime Care and Support Scheme. These liabilities are backed by similar levels of cash and investments which have been collected through motor vehicle CTP premiums.

#### Other Net Liabilities

Other net liabilities increased during 2009-10 by \$298 million to \$2,495 million.

#### **Net Worth**

The movement in various financial and non-financial assets and liabilities, outlined above, resulted in an increase in Net Worth during 2010-11 of \$10,395 million to \$163,287 million.

The increase in net worth is also reported in the 2010-11 statement of comprehensive income as a bottom line aggregate titled 'comprehensive result'.

## **Future Developments**

#### Carbon Tax Impact

On 10 July 2011, the Australian Government announced the Clean Energy Future scheme which, if legislated, will effectively put a price on carbon emissions. A carbon pricing scheme may have a significant impact on the valuation and estimated useful lives of State assets, and the profitability of State businesses. Current modelling indicates that if a carbon pricing mechanism is introduced the carrying value of the State's power generation infrastructure could reduce significantly. Generator profitability and dividends are also modelled to fall significantly.

The introduction of a carbon pricing scheme will also result in possible increases in the asset value of State owned carbon sinks such as Forests NSW.

At the date of this report, the State can not reliably measure the potential impact arising from the Clean Energy Future Scheme.

#### Rail

In December 2006 RailCorp entered into a public private partnership contract with the Reliance Rail Consortium to finance, design, manufacture, commission and provide 78 eight-car trains. The consortium providing the trains has experienced financial difficulties and in December 2010, both Moody's and Standard and Poor's downgraded Reliance Rail's senior debt ratings to below investment grade. The Government is acting to maintain delivery of trains, but risks have increased. At this time no contingent liability exists.

## **Fiscal Targets and Principles**

The Fiscal Responsibility Act 2005 sets out a number of fiscal principles and targets for the General Government sector. In accordance with the Act, a review was tabled in Parliament in June 2011. The review found that many targets and principles were not met. The Government's fiscal consolidation strategy will be reflected in an updated Act to be tabled in Parliament later in 2011-12.

The following commentary reviews the Government's achievement during the year against the fiscal targets and principles identified in that Act:

## **Fiscal Targets**

The Government's medium-term fiscal targets are:

- To reduce the level of General Government sector net financial liabilities as a proportion of gross state product to 7.5 per cent or less by 30 June 2010; and
- To maintain underlying General Government sector net debt as a proportion of gross state product at or below its level as at 30 June 2005, unless an increase is required in net debt to reduce one or more components of General Government net financial liabilities.

The Government's long-term fiscal targets are:

- To reduce the level of General Government sector net financial liabilities as a proportion of gross state product to 6 per cent or less by 30 June 2015;
- To maintain underlying General Government sector net debt as a proportion of gross state product at
  or below its level as at 30 June 2005, unless an increase is required in net debt to reduce one or more
  components of General Government net financial liabilities; and
- To eliminate Total State sector unfunded superannuation liabilities by 30 June 2030.

#### Status:

The General Government net financial liabilities target was not met. Net financial liabilities amounted to \$52.1 billion as at June 2011, 12.0 per cent of GSP against a target of 7.5 per cent by June 2010. The June 2010 result of 12.8 per cent of GSP also exceeded the target.

The General Government sector net debt target was also not met. In the year ending 30 June 2011, General Government sector net debt was 1.8 per cent of GSP compared with 2.3 per cent of GSP in June 2010. This is against a target of 0.9 per cent of GSP by June 2010.

The reduction in general government net debt was affected by the \$3.4 billion proceeds received in 2010-11 from the sale of the State's retail electricity operations, partly offset by the sector's cash deficit.

Total State net unfunded superannuation liabilities were \$34.1 billion (7.9 per cent of GSP) in June 2011 compared with \$34.5 billion (8.5 per cent of GSP) at June 2010. There were several reasons for the dollar reduction including an increase in the liability discount rate used and 2010-11 Pooled Fund earnings being slightly above expected long term returns. The fall in superannuation liabilities was partly offset by one year less of discounting for the present value of total future benefits, and an increase in accrued benefits due to an additional year of services provided by current state super fund scheme contributors. The target of eliminating unfunded superannuation liabilities by June 2030 remains on track.

## **Fiscal Principles**

Principle 1:

The Budget should be framed so as to achieve a net operating result for the General Government sector that is a surplus consistent with the fiscal targets.

#### Status:

Consistent with this principle the actual General Government net operating result for 2010-11 was a surplus of \$1,340 million, largely reflecting the impact of economic stimulus payments from the Commonwealth Government. Excluding stimulus payments, the net operating result for 2010-11 would have been a \$240 million surplus.

Principle 2:

The growth in net cost of services (NCOS) and expenses of the General Government sector is to be managed in accordance with the objective of prudently managing State finances. The annual growth in net cost of services and expenses is not to exceed long-term average revenue growth for the 4-year periods ending with the financial year prior to the Budget year and for the Budget year and forward estimates.

#### Status:

Annual average growth of total expenses for the 4 year period to June 2011 was above long term average revenue growth.

Average annual growth of total expenses for the 4-year period ending June 2011 was 6.2 per cent. After adjusting for fiscal stimulus spending the growth rate was 5.9 per cent. Long-term average revenue growth is 5.2 per cent per annum.

Principle 3:

In managing public sector employee costs the Government policy in negotiating rates of pay and conditions is to be consistent with the fiscal targets.

#### Status:

Consistent with the principle since 2008, the Government policy is for net wage costs not to exceed 2.5 per cent. Agreements concluded in 2010-11 have incorporated 2.5 per cent increases with further increases to be offset by employee-related savings.

The Industrial Relations Amendment (Public Sector Conditions of Employment) Bill 2011 passed by the NSW Parliament strengthens the policy by requiring the Industrial Relations Commission to give effect to government policies on public sector wages and conditions of employment that are declared by regulations.

Principle 4: Capital expenditure proposals are to be evaluated in accordance with government procurement policy requirements.

#### Status:

Consistent with the above principle, this includes the requirements of "Gateway" which tests the soundness of the business case for major projects with the objective of ensuring agencies have an appropriate level of procurement discipline applied to projects. These assessments give Treasury a level of assurance on whether the investment is warranted, the strategic options available and the agency's capability and capacity to manage the delivery of the project. All projects over \$10 million are subject to "Gateway", with 356 reviews having been undertaken since 2004, totalling nearly \$40 billion.

Principle 5: The budget should be framed taking into account the anticipated future fiscal gap likely to develop as a result of demographic changes and other long-term pressures.

#### Status:

Consistent with this principle, an assessment of the impact of budget measures on the fiscal gap in respect of expenses and revenue is presented in the annual budget papers. Measures announced in the 2010-11 Budget increased the fiscal gap by 0.62 percentage point, to an overall gap of 4.9 per cent of GSP by 2043-44. This compares to an initial estimate of 3.4 per cent of GSP in the first NSW Long Term Fiscal Pressures Report, released with the 2006-07 Budget.

Principle 6: The Government shall maintain or increase net worth (i.e. net assets) in real terms.

#### Status:

Consistent with the principle, General Government net worth increased by an average of 2.1 per cent annually in real terms from June 2001 to June 2011.

Principle 7: Employer superannuation liabilities are to be managed and funded so as to eliminate Total State sector unfunded superannuation liabilities by 30 June 2030.

#### Status:

See 2 above.

Principle 8: Government agencies must align their physical asset management practices (on a whole-of-life basis) with their services delivery priorities and strategies.

#### Status:

Consistent with the above principle, Treasury received Total Asset Management (TAM) plans from nominated agencies responsible for 89.6 per cent of General Government asset holdings in 2010-11. TAM strategies are a part of the capital budget process. Government uses TAM strategies to prioritise investments and forecast infrastructure requirements.

Principle 9: Financial risk is to be managed prudently on the basis of sound risk management principles.

#### Status:

Consistent with this principle, aggregate risk is managed by Treasury, TCorp and the NSW Self Insurance Corporation. This includes ongoing review of asset allocation and risk management policies and procedures of authorities subject to the *Public Authorities (Financial Arrangements) Act 1987*.

Agency and project level risk identification procedures and strategies are in place or being developed through the Financial Management Framework; the Commercial Policy Framework; and Total Asset Management guidelines.

The latter incorporates "Working with Government: Policy and Guidelines for Privately Financed Projects" (as updated in 2006) dealing with private sector participation in the provision of public infrastructure.

Principle 10: Any adjustments to legislated tax rates, thresholds and bases are to be made with the maximum possible restraint, having regard to the effect of these adjustments on the overall level of tax revenue. Policies should enable predictability and stability of tax regime.

#### Status:

Consistent with the above principle, the net effect of all tax policy changes in 2010-11 is to reduce the NSW tax burden by around \$1.4 billion cumulatively from 2010-11 to 2013-14.

# Scope of Reporting

The Report on State Finances combines the Consolidated Financial Statements of the NSW General Government and Total State Sectors (the Total State Sector Accounts) and the Outcomes Report as required by Loan Council.

Each report gives a different focus on Government finances. The Consolidated Financial Statements capture the cost of operating Government services including depreciation of non-financial assets and valuation adjustments on assets and liabilities as well as the stock of assets and liabilities. The statements are presented with full accrual accounting note disclosures.

The Outcomes Report provides similar information but is more focused on comparing the actual result to the original budget. In addition, it provides further disaggregation of key aggregates.

A commentary has been provided on the key results of each report.

### **Consolidated Financial Statements**

The Consolidated Financial Statements are also known as the Total State Sector Accounts. They are prepared in accordance with Australian Accounting Standards, in particular AASB 1049, and are audited.

The Total State Sector Accounts reports on the operating results, financial position and cash flows of the New South Wales General Government and Total State Sectors.

The New South Wales Total State Sector includes both the General Government sector and the State's Public Non-Financial Corporations (PNFCs) and Public Financial Corporations (PFCs).

PNFCs are responsible for supplying public infrastructure services, including electricity, ports, water and public transport. PNFCs are largely self-funded from user charges and have been given a specific charter to run their businesses on commercial lines, including the achievement of a commercial rate of return on the resources employed.

PFCs may accept demand, time or savings deposits and/or have the authority to incur liabilities and acquire financial assets in the market on their own account. An example of a PFC is the NSW Treasury Corporation.

Refer to Note 39 for a full list of consolidated entities.

For financial reporting and policy framework purposes, NSW Treasury classifies its Government entities under one of three sectors:

- general government
- public non-financial corporation or
- public financial corporation.

Consolidation of entities in these financial statements has been done in accordance with Australian Accounting Standards AASB 127 and AAS 1049, as disclosed in note 1 to the financial statements.

Note 1 also discloses that certain reserve trusts created under the Crown Lands Act 1989 have been excluded.

A project is currently in progress to identify and value Crown reserves that are 'controlled' by the NSW Government. There are approximately 39,000 Crown reserves in New South Wales. The NSW Government manages some of these reserves while others are managed by local governments or other classifications of trust managers (e.g. community trust boards, administrators, corporations).

Based on a preliminary assessment estimated as at 30 June 2011, the total value of these reserves, potentially controlled by the NSW Government, but not currently recognised in the Total State Sector Accounts, is between \$3 billion and \$4 billion. In addition, the estimated value of buildings and infrastructure assets on these reserves potentially controlled by the NSW Government, but not currently recognised in the Total State Sector Accounts, is between \$4 billion and \$5.5 billion. However, the total value may even be outside of this range, depending on the determination of the assets that are controlled.

The NSW Government will recognise the value of controlled Crown reserve land, buildings, and infrastructure in future General Government Sector and Total State Sector Accounts, once this project is complete and the value can be reliably estimated.

The Auditor-General has qualified his opinion on the consolidated financial statements:

Certain parcels of land within New South Wales and related infrastructure may be controlled by the State, but these have not been recognised in the financial statements. The State is currently identifying and valuing which parcels it controls. Until this exercise is complete, I am unable to obtain all the information I require to form an opinion on the value of land assets and any related infrastructure that should be recognised in the financial statements. My opinion for the year ended 30 June 2010 was similarly qualified.

The Independent Auditor's Report includes an emphasis of matter, which is not an audit qualification. The emphasis of matter refers to a matter appropriately presented or disclosed in the financial report that, in the auditor's judgement, is of such importance that it is fundamental to users' understanding of the financial report.

The emphasis of matter is as follows:

## Significant Uncertainty regarding Collection of Taxation Receivable

I draw attention to Note 6(c) to the financial statements. In 2006-07, the Chief Commissioner of State Revenue received an objection from a taxpayer to an assessment issued under the *Duties Act* 1997. The matter is subject to appeal in the Supreme Court. Until such time as the matter is resolved, the ultimate outcome and impact on the Net Operating Balances, Operating Results and Net Borrowings presented in the Total State Sector Accounts remains uncertain. My opinion is not qualified in respect of this matter.

## **Outcomes Report**

The May 1991 Premiers' Conference agreed to the introduction of the Uniform Presentation Framework (UPF).

The primary objective of the UPF is to ensure that Commonwealth, State and Territory governments provide a common 'core' of financial information. The UPF requires the release of a budget presentation, a mid year update and an end of year Outcomes Report.

The Outcomes Report is based on the AASB 1049 reporting standard to harmonise GFS with accounting standards. It provides a suite of financial statements (without detailed notes) for the various sectors of Government.

The Outcomes Report provides a consistent minimum reporting base for all States and Territories.

# Developments in Financial Reporting

# Public Accounts Committee Inquiry into the Quality and Timeliness of Financial Reporting

On 8 October 2010 the Public Accounts Committee of the Legislative Assembly (PAC) made a number of recommendations to improve the quality and timeliness of financial reporting in the public sector.

The Committee's five recommendations and the Government's response in April 2011 was as follows:

1. The Committee recommends that the Treasurer require all agencies to conduct a hard close of their accounts at 31 March from 2011.

#### Response:

The Government supports the principle underpinning the recommendation that agencies should conduct accounts preparation work as early as possible to minimise any likelihood of misstatements in material submitted to the Auditor-General for audit.

Treasury has consulted with the Auditor-General and the fifteen agencies that recently piloted hard close procedures. The main lesson from the pilot is that a full hard close is not cost efficient or practical for all agencies as it can cause significant duplication with the year end close.

Accordingly, Treasury has implemented a progressive rollout of early close procedures. Early close procedures involve conducting certain aspects of the financial statement preparation process early (for example, developing pro-forma financial statements and resolving significant accounting policy issues) but not conducting all aspects of a hard close. For 2010-11, Treasury has extended the program for early close procedures from the pilot agencies to all large and medium tier agencies.

The Government believes that these initiatives will address the Committee's concerns about the quantity of misstatements in agency accounts, in a cost efficient manner.

2. The Committee recommends that the Treasurer propose amendments to the *Public Finance and Audit Act 1983* requiring chief financial officers to certify their financial reporting systems.

#### Response:

The Government supports the principle that chief financial officers are made more explicitly accountable for the quality of financial information produced by their agencies.

Beginning in 2011, Treasury requires all Chief Financial Officers (CFOs) to express annually a formal opinion as to the effectiveness of internal controls over the financial information prepared by their agencies. These statements are due to Treasury by 15 April 2011. Treasury has also surveyed agencies to inform the ongoing development of this requirement. The Government will assess the effectiveness of this new certification process before determining whether it needs to be supported by amendments to the *Public Finance and Audit Act*.

Current Status: Certification statements have been provided by agency CFOs as at 31 March 2011.

3. The Committee recommends that the Premier ensure that accountability for accurate and timely financial reporting is included in all chief executive officers' performance agreements.

#### Response:

The Government supports this recommendation and it will be incorporated as part of a broader reform of accountability of chief executive officers.

Current Status: CEO performance agreements for principal departments now include a requirement for accurate and timely financial reporting.

4. The Committee recommends that the Treasurer develop and implement a program to bring forward the deadline for the tabling of annual reports in Parliament to three months after the end of the financial year by 2013 at the latest.

#### Response:

The Government supports this recommendation. Amendments will be required to the statutory reporting deadlines set out in the *Public Finance and Audit Act 1983*, the *Annual Reports (Statutory Bodies) Act 1984* and the *Annual Reports (Departments) Act 1985*.

The early close procedures currently being adopted will facilitate earlier tabling of annual reports.

5. The Committee recommends that the Treasurer consider proposing amendments to prescribe minimum qualifications of chief financial officers in the *Public Finance and Audit Act 1983*.

#### Response:

The Premier's Department Circular 99-69 'Qualifications for Senior Financial Management and Accounting Positions' is still current. The Circular prescribes that departmental Chief Financial Officers (and other specified senior financial reporting staff) have formal tertiary and professional accounting qualifications. The Government believes this issue can be managed more flexibly through the current administrative arrangements rather than through legislative amendment.

## Early Close Program

In 2010-11, Treasury expanded its 'Early Close' Program to 50 large and medium sized agencies. The program will assist the government to achieve the outcomes in recommendations 1 and 4 above.

The purpose of the early close is to reduce errors and improve timeliness in the preparation and audit of the annual financial statements. The early close required agencies to prepare financial statements and notes based on the period to March or April 2011, which facilitates the early performance of audit procedures. Effectively, financial statement preparation and audit work commenced earlier, and concluded earlier.

The early close program in 2010-11 included:

- Treasury issuing its accounting policies and mandates before the end of March 2010
- agencies resolving key accounting treatments prior to completing its early close statements
- adopting March or April 2011 as an early close date, and valuing key balances in March/April for example, physical assets and provisions
- drafting of pro forma statements and notes with year to date information, and preparing analytical review and other supporting work papers
- agreement not to adjust prior period comparatives unless there are changes that can be demonstrated are material, for which accounting standards require retrospective adjustment
- the Audit Office reporting its findings to agencies from any audit procedures conducted in respect of early close procedures
- the Audit Office report providing feedback to the agencies in time for the preparation of June statements.

In 2011-12 and 2012-13, Treasury plans to expand and formalise the Early Close Program as well as implement the Government's response to the PAC recommended initiatives. Together, these will improve the quality and timeliness of financial reporting in the public sector.

# Total State Sector Accounts 2010 - 2011

Audited Consolidated Financial Statements of the NSW General Government and Total State Sectors

Total State Sector Accounts 5 - 1

This page left blank intentionally.

# Statement of Compliance

In our opinion the Total State Sector Accounts:

- have been prepared on the basis of the financial reporting requirements as prescribed in the *Public Finance and Audit Act 1983*; and
- are in accordance with AASB 1049 *Whole of Government and General Government Sector Financial Reporting* and all other Australian Accounting Standards.

The Hon. Mike Baird MP Treasurer Philip Gaetjens Secretary The Treasury Mark Pellowe Senior Director The Treasury

BHOW bellow

24 October 2011

Total State Sector Accounts 5 - 3

#### INDEPENDENT AUDITOR'S REPORT

#### New South Wales General Government and Total State Sectors

To Members of the New South Wales Parliament

I have audited the accompanying financial statements of the New South Wales General Government and Total State Sectors (the Total State Sector Accounts), which comprises the statements of financial position as at 30 June 2011, the statements of comprehensive income, statements of changes in equity and statements of cash flows for the year then ended, notes comprising a summary of significant accounting policies and other explanatory information.

#### Basis for Qualified Opinion

Certain parcels of land within New South Wales and related infrastructure may be controlled by the State, but these have not been recognised in the financial statements. The State is currently identifying and valuing which parcels it controls. Until this exercise is complete, I am unable to obtain all the information I require to form an opinion on the value of land assets and any related infrastructure that should be recognised in the financial statements. My opinion for the year ended 30 June 2010 was similarly qualified.

#### **Qualified Opinion**

In my opinion, except for the effects of the matter described in the Basis for Qualified Opinion paragraph, the financial statements are prepared, in all material respects, in accordance with Australian Accounting Standards and section 6 of the *Public Finance and Audit Act 1983* (the PF&A Act).

My opinion should be read in conjunction with the rest of this report.

#### Significant Uncertainty regarding Collection of Taxation Receivable

I draw attention to Note 6(c) to the financial statements. In 2006-07, the Chief Commissioner of State Revenue received an objection from a taxpayer to an assessment issued under the *Duties Act 1997*. The matter is subject to appeal in the Supreme Court. Until such time as the matter is resolved, the ultimate outcome and impact on the Net Operating Balances, Operating Results and Net Borrowings presented in the Total State Sector Accounts remains uncertain. My opinion is not qualified in respect of this matter.

#### The Treasurer's Responsibility for the Financial Statements

The Treasurer is responsible for the preparation of the financial statements in accordance with Australian Accounting Standards and the PF&A Act and for such internal control as the Treasurer determines is necessary to enable the preparation of the financial statements that are free from material misstatement, whether due to fraud or error.

#### Auditor's Responsibility

My responsibility is to express an opinion on the financial statements based on my audit. I conducted my audit in accordance with Australian Auditing Standards. Those standards require that I comply with relevant ethical requirements relating to audit engagements and plan and perform the audit to obtain reasonable assurance about whether the financial statements are free from material misstatement.

An audit involves performing procedures to obtain audit evidence about the amounts and disclosures in the financial statements. The procedures selected depend on the auditor's judgement, including the assessment of the risks of material misstatement of the financial statements, whether due to fraud or error. In making those risk assessments, the auditor considers internal control relevant to the entity's preparation of the financial statements in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the entity's internal control. An audit also includes evaluating the appropriateness of accounting policies used and the reasonableness of accounting estimates made by the Treasurer, as well as evaluating the presentation of the financial statements.

I believe that the audit evidence I have obtained is sufficient and appropriate to provide a basis for my audit opinion.

My opinion does not provide assurance:

- about the future viability of the New South Wales General Government and Total State Sectors
- that the sectors have carried out their activities effectively, efficiently and economically
- about the effectiveness of its internal control
- about the assumptions used in formulating the budget figures disclosed in the financial statements
- about the security and controls over the electronic publication of the audited financial statements on any website where they may be presented
- about any other information which may have been hyperlinked to/from the financial statements.

#### Independence

In conducting my audit, I have complied with the independence requirements of the Australian Auditing Standards and other relevant ethical pronouncements. The PF&A Act further promotes independence by:

- providing that only Parliament, and not the executive government, can remove an Auditor-General
- mandating the Auditor-General as auditor of public sector agencies but precluding the provision of non-audit services, thus ensuring the Auditor-General and the Audit Office of New South Wales are not compromised in their role by the possibility of losing clients or income.

Peter Achterstraat Auditor-General

## **Note 1: Statement of Significant Accounting Policies**

#### Scope

The Total State Sector Accounts include the financial statements for the New South Wales Total State Sector and the General Government Sector.

The Total State Sector comprises the General Government Sector, the Public Trading Enterprise Sector and the Public Financial Enterprise Sector. These sectors are determined in accordance with the principles and rules contained in the Australian Bureau of Statistics *Australian System of Government Finance Statistics:* Concepts, Sources and Methods 2005 (ABS GFS Manual).

The General Government Sector comprises all government agencies that are controlled and mainly financed by the State that:

- redistribute income and wealth; and / or
- provide or distribute goods and services on a non-market basis to individuals and the community.

In New South Wales, the General Government Sector includes government departments, other budget dependent agencies and other agencies that have a regulatory function or provide services primarily to other general government agencies.

Public Trading Enterprises (PTEs) are government controlled entities that are largely self-funded from user charges and have a commercial charter. However, they may receive funding from the State Budget for social programs (non-commercial activities). The PTE sector is also referred to by the ABS as the Public Non-financial Corporation Sector. Examples are the water authorities, the electricity distributors, port authorities and other State Owned Corporations.

Public Financial Enterprises (PFEs) are government controlled entities that perform central bank functions, or accept demand, time or savings deposits, or have the authority to incur liabilities and acquire financial assets in the market on their own account. This sector includes NSW Treasury Corporation. The PFE sector is also referred to by the ABS as the Public Financial Corporation Sector.

The New South Wales Total State Sector and General Government are not-for-profit entities for accounting purposes. There are a number of cash generating units, which are effectively represented by for-profit entities, largely in the PTE sector, including the water, electricity and port authorities.

The financial statements of the Total State Sector and General Government Sector for the year ended 30 June 2011 were authorised for issue by the Treasurer on 24 October 2011. This report was issued from:

The Treasury

Level 27

Governor Macquarie Tower

1 Farrer Place,

Sydney NSW 2000

**AUSTRALIA** 

Unless stated otherwise, references in this report to the "State" applies to the Total State Sector and the General Government Sector.

#### **Basis of Preparation**

The financial statements of the Total State Sector is a general purpose financial report. The purpose of these financial statements is to provide users with information about the stewardship by the Government in relation to the Total State Sector and General Government Sector; and information that facilitates assessments of the macroeconomic impact of the State.

The financial statements of the Total State Sector and the General Government Sector are prepared in accordance with:

- applicable Australian Accounting Standards (which include paragraphs applicable to not-for-profit
  entities and Australian Interpretations), and in particular Australian Accounting Standard AASB 1049
  Whole of Government and General Government Sector Financial Reporting, and
- section 6 of the *Public Finance and Audit Act 1983*.

These financial statements are prepared in accordance with AASB 1049. The financial statements of the General Government Sector is included as a separate column adjacent to the Total State Sector financial information. AASB 1049 harmonises GFS with Generally Accepted Accounting Principles (GAAP) to the extent that GFS does not conflict with GAAP. This requires the selection of options within the Australian Accounting Standards that harmonise with the ABS GFS Manual. A glossary of key technical terms used in the financial statements, including relevant GFS terminology, is included in Note 40.

The financial statements are generally prepared in accordance with the historic cost convention, based on fair value of the consideration given in exchange for assets. However, exceptions to the historic cost convention include: property, plant and equipment, investment property, assets held for sale, financial assets at fair value, borrowings and derivatives at fair value and forestry stock and other biological assets, which are measured at fair value.

Judgements, key assumptions and estimations that management has made in the preparation of the financial statements are disclosed in the relevant notes to the financial statements.

All amounts are rounded to the nearest million dollars and are expressed in Australian dollars.

#### Impact of New and Revised Accounting Standards

#### **Accounting for Long-Term Land Leases**

In 2010-11, as a result of amendments to AASB 117 *Leases*, the State changed its accounting policy on long-term land leases in which it is the lessor. Refer to Note 1 under the heading 'Changes in Accounting Policy' for further details.

### New Accounting Standards issued but not effective

The following accounting standards, amendments and interpretations have been issued, but are not yet effective, and have not been adopted:

- AASB 9 and AASB 2010-7 regarding financial instruments
- AASB 1053 and AASB 2010-2 regarding differential reporting
- AASB 2010-4 regarding annual improvements
- AASB 2010-5 regarding editorial corrections
- AASB 2010-6 regarding disclosures on transfers of financial assets
- AASB 2010-8 regarding deferred tax: recovery of underlying assets
- AASB 1054 regarding Australian additional disclosures
- AASB 2011-1 and AASB 2011-2 regarding the Trans Tasman Convergence Project
- AASB 2011-3 regarding orderly adoption of changes to the ABS GFS Manual
- AASB 124 and AASB 2009-12 regarding related party transactions
- AASB 10 Consolidated financial statements
- AASB 12 Disclosures of interests in other entities
- AASB 13 and AASB 2011-8 regarding fair value measurement
- AASB 119, AASB 2011-10 and AASB 2011-11 regarding employee benefits
- AASB 128 Investments in associates and joint ventures
- AASB 2011-7 regarding consolidation and joint arrangements
- AASB 2011-9 regarding presentation of items of other comprehensive income
- AASB 2009-14 regarding amendments to Interpretation Prepayments of a Minimum Funding Requirement

It is considered impracticable to presently determine the impact of adopting the above listed accounting standards issued, but not effective.

#### **Principles of Consolidation**

The Total State Sector Accounts consolidates all assets, liabilities, equities, revenues and expenses of the New South Wales Government including those of entities controlled by the State, in accordance with AASB 127 *Consolidated and Separate Financial Statements*.

In contrast, the General Government Sector financial statements consolidate only those entities within the general government sector, using the consolidation procedures specified in AASB 127. The General Government Sector financial statements are not required to apply the full requirements of AASB 127 and AASB 139 *Financial Instruments: Recognition and Measurement*. Instead of consolidating the PTEs and PFEs on a line by line basis, the General Government Sector financial statements recognise an asset being the equity investment in those entities, and a gain or loss for changes in the carrying amount of the asset.

Entities are considered to be controlled when the State has the capacity to dominate their financial and operating policies in pursuing the Government's objectives. Entities are not consolidated where the State merely regulates or acts as a trustee, because these fall outside the concept of 'control' defined in AASB 127.

Excluded entities include local government bodies, universities, certain reserve trusts created under the Crown Lands Act 1989, hospitals listed under Schedule 3 of the *Health Services Act 1977*, the State's Superannuation Funds, the trust funds of the New South Wales Trustee and Guardian, Rental Bond Board, and Workers' Compensation Insurance Fund, the NSW Aboriginal Land Council and most professional registration and marketing authorities.

A project is currently in progress to identify and value Crown reserves that are 'controlled' by the NSW Government. There are approximately 39,000 Crown reserves in New South Wales. The NSW Government manages some of these reserves while others are managed by local governments or other classifications of trust managers (e.g. community trust boards, administrators, corporations).

Based on a preliminary assessment, it is currently estimated that the total value of these reserves, potentially controlled by the NSW Government, but not currently recognised in the Total State Sector Accounts, is between \$3 billion and \$4 billion. In addition, the estimated value of buildings and infrastructure assets on these reserves potentially controlled by the NSW Government, but not currently recognised in the Total State Sector Accounts, is between \$4 billion and \$5.5 billion. However, the total value may even be outside of this range, depending on the determination of the assets that are controlled.

The NSW Government will recognise the value of controlled Crown reserve land, buildings, and infrastructure in future General Government Sector and Total State Sector Accounts, once this project is complete and the value can be reliably estimated.

All transactions and balances between NSW government agencies (for the Total State Sector Accounts) and between General Government Sector agencies (for the General Government Sector financial statements), have been eliminated. Dissimilar accounting policies adopted by agencies have been amended to ensure consistent policies are adopted in similar circumstances, unless an Accounting Standard permits categorisation of items for which different policies may be appropriate.

Details of consolidated entities are included in Note 39.

### Statement of Comprehensive Income Presentation

All amounts included in the comprehensive result (total change in net worth before transactions with owners as owners) are classified as 'transactions' or 'other economic flows' consistent with the principles in the ABS GFS Manual.

'Transactions' result from mutually agreed interaction between parties, such as sales of goods and services. It also includes depreciation. 'Other economic flows' result from a change in the volume or value of an asset or liability that does not result from a 'transaction', including revaluations resulting from changes in market prices and other gains and losses that result from changes in the volume of assets.

'Other economic flows' are separated between those recognised in the GAAP operating result and those recognised as 'other comprehensive income', as defined in AASB 101 *Presentation of Financial Statements*. In some cases, certain items required to be disclosed under Accounting Standards are split into 'transaction' and 'other economic flow' components.

#### **Revenue from Transactions**

Revenue is measured at the fair value of the consideration or contribution received or receivable, in accordance with AASB 1004 *Contributions* and AASB 118 *Revenue*. Additional comments regarding the accounting policies for the recognition of revenue are discussed below.

#### **State Taxation**

State taxation is recognised upon assessment as follows:

- Government-assessed revenues (mainly land tax) are recognised at the time the assessments are issued.
- Taxpayer-assessed revenues including payroll tax and stamp duty, are recognised when the funds are
  received by the tax collecting agency. Additional revenues, identified after review of taxpayer returns,
  are recognised upon amended assessment.

#### **Grants and Subsidies**

These are recognised when the State gains control over the grants and subsidies, which is normally obtained when the cash is received.

This primarily comprises Commonwealth general purpose, special purpose and national partnership payments.

#### Sale of Goods and Services

Revenue from the sale of goods is recognised when the State transfers to the buyer the significant risks and rewards of ownership of the assets.

Revenue is recognised from the rendering of services when the service is provided or by reference to the stage of completion.

Rental revenue (including from investment properties and public housing) is treated as a government service and recognised in accordance with AASB 117 *Leases* on a straight-line basis over the lease term.

#### **Interest Revenue**

Interest revenue is recognised as it accrues using the effective interest method in accordance with AASB 139 *Financial Instruments:* Recognition and Measurement. Net realised or unrealised gains and losses on the revaluation of investments do not form part of 'revenue / expenses from transactions' but are reported as part of 'other economic flows – included in the operating result'.

#### Dividends and Income Tax Equivalents from other sectors

The General Government Sector receives dividends and tax equivalent payments (pursuant to National Competition Policy) from some of the State's PTEs and PFEs. Dividends are recognised as revenue when the right to receive payment is established. Dividend 'transaction' revenue excludes dividends paid out of asset sale proceeds, which are treated as 'other economic flows – included in the operating result'.

Income tax equivalents (represented by the current tax payable / receivable by / from the PTE and PFE sector) are recognised as 'revenue from transactions' in the period when earned. Tax equivalent receivables / payables from / to the PTE and PFE sector are also recognised in the General Government Sector, when controlled.

Deferred tax equivalent income and expense are recognised in the General Government Sector as part of 'other economic flows – included in the operating result', as well as an asset / liability.

The General Government Sector is the counterparty to the tax effect accounting entries recognised by PTEs and PFEs that are part of the National Tax Equivalent Regime. This treatment is adopted on the basis that the General Government Sector controls these sectors and therefore these amounts.

On consolidation, dividend and income tax equivalent entries are eliminated for the Total State Sector Accounts.

#### Other Dividends and Distributions

Other dividends include dividends received from investments in entities other than the PTE and PFE sectors and are recognised when the right to receive payment is established. Distributions are mainly represented by distributions from managed fund investments, administered by NSW Treasury Corporation (TCorp). Distributions are recognised as revenue when the right to receive payment is established, which for the managed fund investments is normally on distribution. They exclude fair value movements in the unit price of the investments, which are recognised as 'other economic flows - included in the operating result'.

#### Fines, Regulatory Fees and Other Revenue

These revenues are recognised when earned if the monetary amounts can be determined reliably. Otherwise, they are accounted for as follows:

- Fines issued by the Courts are recognised when the fine is issued. Traffic infringement fines, such as those administered by the State Debt Recovery Office, are recognised when the cash is received. Revenue from enforcement orders is regarded as being reliably measured when the order is issued.
- Licence fees and royalty revenue are recognised on an accrual basis in accordance with the substance of the relevant agreement.

### **Expenses from Transactions**

Expenses are recognised when incurred.

#### **Employee Expenses (excluding superannuation)**

These expenses include costs related to employment such as salaries and wages, leave entitlements, fringe benefits tax, workers' compensation, redundancies and other on-costs associated with leave entitlements.

Payroll tax (a State tax) paid by New South Wales general government sector agencies is eliminated in the General Government Sector financial statements, along with the PTE and PFE amounts, on consolidation in the Total State Sector. Some employee-related expenses are capitalised as part of the construction costs of certain non-current physical assets.

The recognition and measurement policy for employee expenses is detailed below in the associated liability policy note.

#### **Superannuation Expense**

Superannuation expense comprises:

- for defined contribution plans, the accrued contribution for the period;
- for defined benefit plans, the current service cost and gross interest cost less the expected return on plan assets. This excludes the actuarial gains and losses, which are classified as 'other economic flows other comprehensive income'.

#### **Depreciation and Amortisation**

Each depreciable property, plant and equipment asset is depreciated to allocate the cost or revalued amount (net of its residual value) over its useful life, in accordance with AASB 116 *Property, Plant and Equipment.*Depreciation is generally allocated on a straight-line basis.

However certain heritage assets, including original artworks and collections and heritage buildings, may not have a limited useful life because appropriate curatorial and preservation policies are adopted. Such assets are not subject to depreciation. Land is not a depreciable asset.

Intangible assets with finite lives are amortised under the straight line method and expensed in the statement of comprehensive income for the period, in accordance with AASB 138 *Intangible Assets*. Intangible assets with an indefinite life are not amortised, but are tested for impairment annually.

#### Interest expense

This comprises interest on borrowings and the unwinding of discounts on non-employee provisions. Interest costs, including borrowing costs under AASB 123 *Borrowing Costs*, are recognised as expenses in the period in which they are incurred.

#### **Other Property Expenses**

This comprises land rent and royalty expenses, which are recognised as expenses in the period in which they are incurred.

#### **Other Operating Expenses**

These expenses generally represent the day-to-day running costs incurred in the normal operation of agencies, and include asset maintenance costs paid to external parties. The recognition and measurement policy for other provision expenses is detailed below in the associated liability policy note.

#### **Grants and Transfer expenses**

Grants and transfer expenses generally comprise cash contributions to local government authorities and non-government organisations. They are expensed when the State transfers control of the assets. For the General Government Sector, they also include grants and subsidies paid to PTEs and PFEs.

#### Accounting for the Goods and Services Tax (GST)

In accordance with Interpretation 1031 Accounting for the Goods and Services Tax, revenues, expenses and assets are recognised net of the amount of GST, except:

- where the amount of GST incurred as a purchaser is not recoverable from the Australian Taxation
   Office, it is recognised as part of the cost of acquisition of an asset or as part of an item of expense; and
- receivables and payables are stated with the amount of GST included.

Cash flows are included in the statement of cash flows on a gross basis and the GST component of cash flows arising from investing and financing activities which is recoverable from, or payable to, the Australian Taxation Office is classified as an operating cash flow.

#### Other Economic Flows

Other economic flows mainly comprise gains and losses on re-measurement of assets and liabilities. This includes realised and unrealised gains and losses, such as gains and losses on asset disposals and sale of businesses, actuarially assessed gains and losses of defined benefits superannuation liabilities, fair value adjustments to physical and financial assets, including investments in other sectors and dividends from asset sale proceeds. These gains or losses are 'other economic flows', which are included either in the GAAP 'operating result' or 'other comprehensive income', in accordance with AASB 101 *Presentation of Financial Statements*.

## **Discontinuing Operations**

The financial impact of discontinuing operations is disclosed in summary on the face of the Statement of Comprehensive Income in accordance with AASB 5 Non-Current Assets Held for Sale and Discontinued Operations. Note 35 discloses further detail for each discontinued operation, including the financial impact of transactions (revenues and expenses) and other economic flows, the accounting gain or loss, and the cash flows of the discontinued operation.

#### **Assets**

Assets recognised in the statement of financial position are classified into financial and non financial assets, based on a liquidity presentation.

#### Cash and Cash Equivalents

Cash and cash equivalent assets in the statement of financial position comprise cash at bank and in hand, short-term deposits with an original maturity of three months or less, and deposits in NSW Treasury Corporation's HourGlass Managed Fund Cash Facility.

For the purposes of the Statement of Cash Flows, cash and cash equivalents consist of cash and cash equivalents as defined above, net of outstanding bank overdrafts.

#### Receivables

Receivables include debtors in relation to goods and services, taxes, fines and levies receivable. Statutory receivables, such as taxes receivable are not classified as financial instruments.

Receivables are recognised initially at fair value, based on the transaction cost or face value, in accordance with AASB 139. Subsequent measurement is at amortised cost using the effective interest method, less an allowance for any impairment.

Reimbursements receivable are recognised as a separate asset when it is virtually certain that the reimbursement will be received if the entity settles the obligation and shall not exceed the amount of the related provision.

Changes in receivables are accounted for when impaired ('other economic flows – included in the operating result'), derecognised ('other economic flows – included in the operating result') or through the amortisation process ('transaction').

Short-term receivables with no stated interest rate are measured at the original invoice amount where the effect of discounting is immaterial.

#### Financial Assets at Fair Value

Financial assets at fair value mainly include certain investments designated at fair value through profit or loss upon initial recognition, including the NSW Treasury Corporation Hour-Glass Investment facilities. In the Total State Sector Accounts, this also includes securities and placements held by NSW Treasury Corporation.

Financial assets at fair value are either classified as 'held for trading', 'available for sale' (the residual category) or are designated at 'fair value through profit and loss', in accordance with AASB 139. Changes in fair value for assets classified or designated at fair value through profit and loss are recognised as an 'other economic flow - included in the operating result'. Changes in fair value for available for sale assets are recognised as 'other economic flows - other comprehensive income', until impaired or disposed of. Refer to Note 1 *Impairment of Financial Assets and Financial Liabilities* for further details.

A change in fair value excludes 'interest' and 'distributions', which are recognised as 'revenue from transactions'.

Financial assets designated at fair value through profit or loss, namely the TCorp Hour Glass Investment facilities and the TCorp securities and placements, are designated on the basis that these financial assets are managed and their performance is evaluated on a fair value basis, in accordance with a documented risk management strategy, and information about these assets is provided internally on that basis to key management personnel.

Purchases and sales of financial assets under contracts that require delivery of the asset within the timeframe established by convention or regulation are recognised on the trade date i.e. the date that government was committed to purchase or sell the asset.

#### **Advances Paid**

Advances paid comprise loans made for public policy purposes. As such, these advances are generally contracted at interest rates that are below market rates. Advances paid are initially measured at fair value plus transaction costs. Any additional amount lent on low interest loans (compared to the fair value) is recognised in the operating result.

Advances paid consist of non-derivative financial assets with fixed or determinable payments that are intended to be held to maturity or are not quoted in an active market. These financial assets are subsequently measured at amortised cost using the effective interest method, in accordance with AASB 139. Changes in advances paid are accounted for when impaired ('other economic flows – included in the operating result'), derecognised ('other economic flows – included in the operating result') or through an amortisation process ('transaction').

#### **Equity Investments in Other Public Sector Entities**

In the General Government Sector financial statements, the interest in the PTE and PFE sectors is, in the absence of fair value, accounted for as an equity investment based on the state's proportional share of the carrying amount of net assets of those sectors (before consolidation adjustments), in accordance with AASB 1049. Any change in the carrying amount of the investment is accounted for as if the change in carrying amount is a change in fair value and accounted for in a manner consistent with the treatment of 'available for sale' financial assets in AASB 139 and is recognised as an 'other economic flow – other comprehensive income'. Dividends from the General Government Sector investments in the PTE and PFE sector are accounted for as 'revenue from transactions'.

#### **Investments in Associates**

Equity investments in joint venture entities and associates are accounted for using the equity method.

Movements in the State's share of profits are recognised in the operating result, split between dividends recognised as 'revenue from transactions' and the share of earnings excluding dividends recognised as 'other economic flows – included in the operating result'. Movements in the State's share of revaluations to a reserve are recognised as an 'other economic flows – other non-owner movement in equity'.

#### Impairment of Financial Assets

All financial assets, except for those measured at fair value through profit or loss, are subject to annual review for impairment, in accordance with AASB 139.

An allowance for impairment of receivables is established when there is objective evidence that the State will not be able to collect amounts due.

For financial assets carried at amortised cost, the amount of the allowance is the difference between the asset's carrying amount and the present value of estimated future cash flows, discounted at the effective interest rate.

When an available for sale financial asset is impaired, the amount of the cumulative loss is removed from reserves and recognised in profit or loss, based on the difference between the acquisition cost (net of any principal repayment and amortisation) and current fair value, less any impairment loss previously recognised in profit or loss.

Any reversals of impairment losses are reversed through profit or loss, where there is objective evidence, except reversals of impairment losses on investments in an equity instrument classified as 'available for sale' which must be made through the reserve. Reversals of impairment losses of financial assets carried at amortised cost cannot result in a carrying amount that exceeds what the carrying amount would have been had there not been an impairment loss.

The amount of the impairment loss is recognised as 'other economic flows - included in the operating result'. Bad debts are written off as incurred and are treated as 'expenses from transactions', where mutually agreed.

#### De-recognition of financial assets and financial liabilities

In accordance with AASB 139, a financial asset is derecognised when the contractual rights to the cash flows from the financial assets expire; or if the State transfers the financial asset:

- where substantially all the risks and rewards have been transferred or
- where the State has not transferred substantially all the risks and rewards, if control has not been retained.

A financial liability is derecognised when the obligation specified in the contract is discharged or cancelled or expires.

#### **Inventories**

Inventories held for distribution are stated at cost, adjusted when applicable for any loss of service potential, in accordance with AASB 102 *Inventories*. A loss of service potential is recognised where the current replacement cost is lower than the carrying amount.

Inventories (other than those held for distribution) are valued at the lower of cost or net realisable value. Cost is calculated using the weighted average cost or the 'first in first out' method.

Net realisable value is the estimated selling price in the ordinary course of business less the estimated costs of completion and the estimated costs necessary to make the sale.

Where inventories are acquired at no cost or for nominal consideration, cost is the current replacement cost as at the date of acquisition. The current replacement cost is the cost the State would incur to acquire the asset on the reporting date.

#### **Forestry Stock**

The fair value of native forest crops, softwood plantations and hardwood plantations is determined using a discounted cash flow approach. The valuation assumes the continuation of existing practices with regard to forest management and silviculture. The market valuation is prepared by professional foresters, employed by Forests NSW using techniques/methods published in scientific journals and accepted by the forestry industry. The net change in fair value (resulting from price and volume movements) from the beginning to the end of the year is recognised as revenue or an expense in the statement of comprehensive income. This method of valuation closely reflects the usual market practice and provides a more accurate view of the value of the assets in terms of future revenue generation.

## Assets (or Disposal Groups) Held for Sale

Certain non-current assets (or disposal groups) are classified as held for sale, where their carrying amount will be recovered principally through a sale transaction, not through continuing use.

Non-current assets (or disposal groups) held for sale are recognised at the lower of carrying amount and fair value less costs to sell, in accordance with AASB 5 *Non-Current Assets Held for Sale and Discontinued Operations*. These assets are not depreciated while they are classified as held for sale.

#### **Investment Properties**

The State owns properties to earn rentals and/or for capital appreciation. These investment properties are stated at fair value supported by market evidence at the reporting date.

Gains or losses arising from changes in fair value are included in 'other economic flows – included in the operating result' for the period in which they arise. No depreciation is charged on investment properties, however, where material, 'consumption of capital' is recognised as an 'expense from transactions'.

Management has determined that the following be treated as property, plant and equipment, instead of investment properties based on AASB 140 *Investment Property*:

- public housing is treated as property, plant and equipment because the properties are held to provide a social service rather than for investment purposes; and
- properties leased within the NSW public sector by the State Property Authority are treated as property, plant and equipment because the properties are held to provide a service rather than for investment purposes.

#### Property, Plant and Equipment

Property, plant and equipment comprise three asset classes:

- Land and buildings
- Plant and equipment
- Infrastructure systems.

Land and buildings include public housing, schools, TAFE colleges, hospitals and Crown land.

Plant and equipment include computer hardware, rail rolling stock, public buses and ferries, and museum and library collections.

Infrastructure systems comprise the state's power stations, dams, electricity and water system assets, ports, major roads and railway lines.

#### Capitalisation and Initial Recognition

Property, Plant and Equipment is initially recognised at acquisition cost, in accordance with AASB 116 *Property, Plant and Equipment.* Cost is the amount of cash or cash equivalents paid or the fair value of the other consideration given to acquire the asset at the time of its acquisition or construction or, where applicable, the amount attributed to that asset when initially recognised in accordance with the specific requirements of Australian Accounting Standards.

Assets acquired at no cost or for nominal consideration are initially recognised at their fair value at the date of acquisition. Fair value is the amount for which an asset could be exchanged between knowledgeable, willing parties in an arm's length transaction.

The cost of assets constructed for own use includes the cost of materials, direct labour, and foreign exchange gains and losses arising during construction as well as an appropriate proportion of variable and fixed overhead costs that can be reliably attributed to the assets.

In general, property, plant and equipment with a value greater than \$5,000 is capitalised except for computer equipment which is normally capitalised irrespective of the \$5,000 threshold where it is considered to be part of a network of assets.

#### Valuation of Property, Plant and Equipment

Property, plant and equipment is valued at fair value in accordance with Australian Accounting Standard AASB 116 and NSW Treasury Policy Paper 07-1 *Accounting Policy: Valuation of Physical Non-Current Assets at Fair Value* as set out below.

Property, plant and equipment is measured on the basis of the fair value of its existing use, where there are no feasible alternative uses in the existing natural, legal, financial and socio-political environment. However, where there are feasible alternative uses, assets are valued at fair value, based on their highest and best use.

Fair value of property, plant and equipment is determined based on the best available market evidence, including current market selling prices for the same or similar assets.

Market evidence is available and used for the following types of property, plant and equipment:

- Land under roads, valued at existing use, based on en globo valuation approach or proxy such as open space land (i.e. as such land generally has no feasible alternative use, is undeveloped and publicly accessible).
- Other land, including Crown leasehold land, that is valued based on the net present value of the income stream
- Non-specialised buildings, which include commercial and general purpose buildings for which there is a secondary market
- Certain heritage assets, including artworks, book collections, philately and coin collections.

Where there is no available market evidence, the asset's fair value is measured at its market buying price, the best indicator of which is depreciated replacement cost.

Depreciated replacement cost is used for specialised plant and infrastructure based on existing use. Depreciated replacement cost for these types of assets is based on the 'incremental optimised replacement cost'. Optimised replacement cost is the minimum cost, in the normal course of business, to replace the existing asset with a technologically modern equivalent asset with the same economic benefits, adjusting for any overdesign, overcapacity and redundant components. Incremental optimisation means that optimisation is limited to the extent that optimisation can occur in the normal course of business, using commercially available technology.

Depreciated replacement cost is also used, in the absence of market evidence, to revalue:

- Specialised buildings designed for a specific, limited purpose with no feasible alternative use. This
  includes hospitals, schools, court houses, emergency services buildings and buildings to house
  specialised plant and infrastructure and some heritage properties.
- Many heritage assets, including library and museum collections that are of a specialised nature with no feasible alternative use.

However, certain heritage and cultural assets are not recognised where they cannot be reliably measured.

Non-specialised assets with short useful lives are measured at depreciated historical cost, as a surrogate for fair value.

#### Revaluation of Property, Plant & Equipment

Revaluations are made with sufficient regularity to ensure that the carrying amount of property, plant and equipment does not materially differ from fair value at the reporting date. Subject to the above, assets are revalued at least every five years.

Where the State revalues non-current assets by reference to current prices for assets newer than those being revalued (adjusted to reflect the present condition of the assets), the gross amount and accumulated depreciation are separately restated.

Otherwise, for non-specialised assets where market based evidence is available, any accumulated depreciation is generally offset against the gross carrying amount of the assets to which they relate, and the net asset carrying amount is increased or decreased by the revaluation increment or decrement.

Revaluation increments are credited directly to the asset revaluation reserve, except that, to the extent that an increment reverses a revaluation decrement for that class of asset previously recognised as a loss in the operating result, the increment is recognised as a gain.

Revaluation decrements are recognised immediately as losses, except that they are debited directly to the asset revaluation reserve to the extent that a credit exists in the asset revaluation reserve in respect of the same class of asset.

Where an asset that has previously been revalued is disposed of, any balance remaining in the asset revaluation reserve in respect of that asset is transferred to accumulated funds.

#### Impairment of property, plant and equipment

The State assesses at each reporting date whether there is any indication that an asset or a cash generating unit may be impaired, in accordance with AASB 136 *Impairment of Assets*. If such an indication exists, the State estimates the recoverable amount. An impairment loss is recognised where the carrying amount of the asset or cash-generating unit exceeds the recoverable amount. Impairment losses are recognised as 'other economic flows – other comprehensive income'.

The recoverable amount of specialised assets that form part of a cash generating unit, in the absence of a market selling price, is the value in use, based on the expected future cash flows.

For not-for-profit entities, where an asset does not belong to or constitute a cash generating unit, it cannot be impaired under AASB 136 unless selling costs are material. This is because for not-for-profit entities, AASB 136 modifies the recoverable amount in such circumstances to be the higher of fair value less costs to sell and depreciated replacement cost.

#### **Intangible Assets**

The State recognises intangible assets only if it is probable that future economic benefits will flow to the State and the cost of the asset can be measured reliably. Examples of intangibles include computer software and easements to access privately owned land.

Intangible assets are measured initially at cost, in accordance with AASB 138. Where an asset is acquired at no or nominal cost, the cost is its fair value as at the date of acquisition.

All research costs are expensed. Development costs are only capitalised when certain criteria are met.

Intangible assets are subsequently measured at fair value only if there is an active market. If there is no active market, the assets are carried at cost less any accumulated amortisation.

Intangible assets are tested for impairment where an indicator of impairment exists and in the case of intangible assets with indefinite lives, annually, either individually or at the cash generating unit level.

Easements are estimated to have an indefinite life as the access rights are considered to be permanent.

#### Other Non Financial Assets

Other non financial assets include prepayments and emerging assets arising from Build-Own-Operate Transfer arrangements. Prepayments represent payments in advance of receipts of goods or services. Emerging assets are discussed separately as part of 'privately financed projects and service concession arrangements'.

#### **Privately Financed Projects and Service Concession Arrangements**

In a privately financed project (PFP), a public sector entity (the grantor) arranges for the private sector (the operator) to design, finance and build infrastructure and provide associated operational or management services for an agreed period (the service period).

Many PFPs include a service concession arrangement (SCA) as described in Interpretation 129 Service Concession Arrangements: Disclosures. An SCA is an agreement under which the public sector (the grantor) grants a concession to the private sector (the operator) to provide services that give the public access to major economic and social facilities. In effect, the SCA operator (rather than the grantor) is the primary provider of the services with the infrastructure and provides the services to the public.

PFPs are accounted for in three different ways, depending on the extent of the grantor's control of the underlying infrastructure, ie whether the infrastructure is:

- grantor-controlled from the beginning of the service period
- operator-controlled during the service period and grantor-controlled thereafter or
- operator-controlled for its entire useful life.

PFP infrastructure purchased under a deferred payment arrangement or acquired under a finance lease is grantor-controlled from the beginning of the service period. Such infrastructure is recognised as property, plant and equipment and depreciated over its useful life or the term of the lease in accordance with AASB 116 or AASB 117. The payment obligation is recognised as a liability.

PFP infrastructure subject to a Build-Own-Operate Transfer (BOOT) arrangement is operator-controlled during the service period but grantor-controlled thereafter. The grantor receives the infrastructure in exchange for granting a service concession to the operator under a SCA. At the end of the service period the grantor recognises the transferred infrastructure as property, plant and equipment and commences depreciating it in accordance with AASB 116. At present, BOOT arrangements are the only PFPs to feature SCAs and every BOOT arrangement includes one. See note 17 for details of present SCAs.

PFP infrastructure subject to a Build-Own-Operate (BOO) arrangement is permanently operator-controlled. Therefore the grantor does not recognise the infrastructure as an asset. Interpretation 4 *Determining whether an Arrangement contains a Lease* is applied where relevant. Any PFP service fees payable to the operator are expensed as incurred.

The principles and guidance in Treasury Policy & Guidelines Paper TPP 06-8 Accounting for Privately Financed Projects apply and are used to determine the grantor's accounting treatment for a PFP or SCA under existing Australian accounting pronouncements (such as AASB 116, AASB 117 or Interpretation 4),.

TPP 06-8 determines which party controls the infrastructure by assessing who has the majority of the associated risks and benefits. Where the grantor controls the infrastructure during the service period, it recognises an asset for the infrastructure and a liability for any associated obligation to pay for it.

An up-front contribution by the operator (or grantor), that is substantively part of the PFP is recognised progressively over the period of consequently reduced payments.

A right to receive the infrastructure for a nominal sum (including zero) at the end of the service period is recognised as revenue and an asset whose value emerges during that period. The accumulated value of the right at the end of the service period equates to the written down replacement cost of the infrastructure at that time. The value is allocated during the service period as if it were the compound value of an annuity discounted at the NSW government bond rate applicable to the purchaser at the commencement of the service period. Any increase or decrease in the fair value of the right to receive the infrastructure that occurs during the service period, is recognised as an asset revaluation, similarly to a revaluation of property plant and equipment.

Emerging rights to receive SCA infrastructure are classified as "other assets" and "other revenue". Up-front contributions are classified as "other liabilities" (if received from the operator) or "prepayments" (if paid to the operator).

A land lease in connection with a PFP is accounted for in accordance with AASB117 Leases.

#### Liabilities

Liabilities in the statement of financial position are presented on a liquidity basis.

#### **Deposits held**

Deposits held represent liabilities, for customer and contractors' security deposits for utilities such as electricity and water and for Generation Trading Agreements (GTAs) with Origin and TRUenergy, referred to as 'GenTraders'. Customer and contractor deposits can be refunded at any time, and in the case of the GenTrader deposits, if certain contractual conditions are not met. These deposits are recognised at no less than the amount payable on demand, in accordance with AASB 139.

#### **Payables**

These amounts represent liabilities for goods and services provided to the State prior to the end of the financial year that are unpaid. Payables include accrued interest, accrued salaries, wages and on-costs, amounts owing for construction or purchase of assets and amounts payable for settlement of financial liabilities under contract.

Payables are recognised initially at fair value, usually based on the transaction cost or face value, in accordance with AASB 139. Subsequent measurement is at amortised cost using the effective interest method.

Short-term payables with no stated interest rate are measured at the original invoice amount where the effect of discounting is immaterial.

#### **Borrowings and Advances Received**

The borrowings and advances received liabilities are not held for trading and represent funds raised from the following sources:

- loans raised by the Commonwealth on behalf of the State under the previous Financial Agreement;
- advances by the Commonwealth for housing and other specific purposes;
- domestic and overseas borrowings raised by the NSW Treasury Corporation; and
- domestic borrowings by public sector agencies (including finance leases).

The General Government Sector borrowings and advances received liabilities include borrowings by general government agencies from NSW Treasury Corporation, which is a PFE. These are eliminated in the Total State Sector.

General Government Sector borrowings are direct loans with no market value, and are recognised at amortised cost using the effective interest method, in accordance with AASB 139.

Amortised cost is the face value of the debt less unamortised discount or plus unamortised premiums. The discount or premiums are treated as finance charges and amortised using the effective interest rate method over the term of the debt.

In the Total State Sector, the domestic and overseas borrowings are designated at 'fair value through profit or loss' under AASB 139, on the basis that they are managed by NSW Treasury Corporation and evaluated on a fair value basis in accordance with a documented risk management strategy, and information is provided internally on that basis to key management personnel.

Overseas borrowings are translated at exchange rates prevailing at the reporting date.

Gains or losses arising from fair value movements in borrowings 'designated at fair value through profit or loss' (excluding interest), foreign exchange and debt restructuring transactions are included as 'other economic flows – included in the operating result' in the period in which they arise.

#### Lease Liabilities, Assets and Operating Leases

A distinction is made between finance leases, which effectively transfer from the lessor to the lessee substantially all the risks and benefits incidental to ownership of the leased assets, and operating leases under which the lessor effectively retains substantially all such risks and benefits.

Finance leases are recognised as assets and liabilities at the fair value of the leased property, or if lower, at the present value of the minimum lease payments. The leased asset is amortised on a straight line basis over the term of the lease or, where it is likely that the entity will obtain ownership of the asset, the useful life of the asset to the entity. The finance lease liability is determined in accordance with AASB 117 *Leases*. Lease payments are allocated between the principal component of the lease liability and the interest expense.

Long term leases of land are classified as finance leases receivable. This recognises that substantially all the risks and rewards incidental to ownership of the land are transferred to the lessee.

Operating lease payments and receipts are charged to the operating result systematically over the term of the lease.

The cost of leasehold improvements is capitalised as an asset and amortised over the remaining term of the lease or the estimated useful life of the improvements, whichever is the shorter.

#### **Derivative Liabilities and Assets**

The State has derivative assets and liabilities. Derivatives are held for trading financial instruments (except for designated and effective hedging instruments which are subject to hedge accounting), valued on a fair value basis as at reporting date, in accordance with AASB 139. Gains and losses from one valuation date to the next are recognised as 'other economic flows – included in the operating result'.

Designated and effective hedges are measured at fair value and are accounted for either as a fair value hedge (i.e. hedge of exposures to changes in fair value) or a cash flow hedge (i.e. hedge of exposure to variability in cash flows). Gains or losses on fair value hedges are recognised as an 'other economic flow – included in the operating result'. Gains or losses on the effective portion of cash flow hedges are recognised as an 'other economic flow – other comprehensive income', until the forecast transaction affects profit or loss and it is recycled into 'other economic flows – included in the operating result'. The ineffective portion of cash flow hedges is recognised as an 'other economic flow – included in the operating result'.

Where an active market exists, fair values are determined by reference to the specific market quoted prices / yields at year end. If no active market exists, judgement is used to select the valuation technique which best estimates fair value by discounting the expected future cash flows arising from the financial instruments to their present value using market yields and margins appropriate to the financial instruments. These margins take into account credit quality and liquidity of the financial instruments.

Funding swaps are valued off the appropriate swap curve.

All derivatives are recognised on the statement of financial position at trade date (the date the State becomes party to the contractual provisions of the financial instrument concerned).

#### **Employee Provisions (excluding superannuation)**

#### Wages and Salaries, Annual Leave and Sick Leave

Liabilities for salaries and wages (including non-monetary benefits), annual leave and paid sick leave that are due to be settled within 12 months of the reporting date are recognised and measured in respect of employees' services up to the reporting date at undiscounted amounts based on the amounts expected to be paid when the liabilities are settled.

Long-term annual leave that is not expected to be taken within 12 months is measured at present value in accordance with AASB 119 *Employee Benefits*. Market yields on government bonds as at 30 June are used to discount long-term annual leave.

Unused non-vesting sick leave does not give rise to a liability as it is not considered probable that sick leave taken in the future will be greater than the benefits accrued in the future.

The outstanding amounts of workers' compensation insurance premiums and fringe benefits tax, which are consequential to employment, are recognised as liabilities and expenses where the employee benefits to which they relate have been recognised.

#### Long Service Leave

A liability for long service leave is measured in accordance with AASB 119 at the present value of future payments anticipated for the employee services that the State has taken on at the reporting date, using the projected unit credit method. An actuary calculates this using:

- expected future wage and salary levels
- experience of employee departures, and
- periods of service.

Estimated future cash outflows are discounted using market yields at the reporting date that closely match the term of maturity of government bonds.

In certain circumstances, a short hand measurement technique is used as allowed by AASB 119, based on employees with five and more years of services, where it is not materially different from the present value, as confirmed periodically by an actuary.

#### Self funded worker's compensation

Some government agencies hold a group self-insurer's licence with the WorkCover Authority for workers' compensation.

Other government agencies are covered for workers' compensation by the State's self insurance scheme, known as the Treasury Managed Fund.

These liabilities are actuarially calculated and measured on a discounted cash flows basis, on a similar basis to 'other provisions'.

#### **Superannuation Provision**

An unfunded superannuation liability is recognised in respect of the defined benefit schemes, in accordance with AASB 119. It is measured as the difference between the estimated present value of members' accrued benefits at reporting date and the estimated net market value of the superannuation scheme assets at that date.

The actuaries apply estimating techniques to value the unfunded superannuation liability. The liability is assessed annually and is calculated based on the latest Triennial Review actuarial economic assumptions, except for the discount rate. The discount rate is based on the long term Commonwealth government bond rate as at 30 June which is adjusted annually, to recognise the extra long term nature of superannuation liabilities at the reporting date.

In estimating these liabilities, there are many assumptions, as well as market forces that can impact the liability value over the next financial year.

The present value of accrued benefits is based on expected future payments that arise from membership of the fund to reporting date in respect of the contributory service of current and past New South Wales state government employees.

The accrued benefits amount is calculated having regard to:

- expected future wage and salary levels;
- the growth rate in the Consumer Price Index; and
- the experience of employee departures and their periods of service.

Detailed information regarding the most recent assumptions from the 2009 triennial review is available from the 'Report on Actuarial Investigation of State Superannuation Schemes 2009' at http://www.treasury.nsw.gov.au.

Actuarial gains and losses resulting from changes in measurement assumptions (e.g. discount rate and abnormal earning rates) are immediately recognised as part of 'other economic flows – other comprehensive income'. The other components of the expense are recognised in 'expenses from transactions'.

#### **Other Provisions**

Other provisions exist when:

- the State has a present legal or constructive obligation as a result of a past event;
- it is probable that an outflow of resources will be required to settle the obligation; and
- a reliable estimate can be made of the amount of the obligation.

Other provisions are recognised, in accordance with AASB 137 *Provisions, Contingent Liabilities and Contingent Assets*, at the estimates of the obligation to pay. If the effect of the time value of money is material, provisions are discounted at a pre-tax rate that reflects the current market assessments of the time value of money and the risks specific to the liability.

These include the State's obligations arising from the:

- schemes managed by the NSW Self Insurance Corporation (SICorp), including home warranty
  insurance outside the NSW public sector, closed schemes and the Treasury Managed Fund, a self
  insurance scheme for certain public sector agencies.
- Workers' Compensation (Dust Diseases) Board and WorkCover Authority outstanding claims, including claims assumed by the State from some failed insurance companies.
- Lifetime Care and Support Scheme, which provides treatment, rehabilitation, care and support services to persons catastrophically injured in motor accidents in New South Wales.

In regard to outstanding claims, the liabilities are measured as the present value of the expected future payments, including claims incurred but not yet reported, and the anticipated fund management fees. Expected future payments are estimated on the basis of the ultimate cost of settling claims.

The amount and timing of the actual outflows in relation to the above provisions have a degree of uncertainty. Actual results may depend on a number of factors specific to the type of claim, for example, future economic and environmental conditions may be different to those assumed.

Any changes to the liabilities from the unwinding of the discount due to the passage of time is recognised as interest in 'expenses from transactions' in the operating result.

Actuarial gains and losses resulting from changes in measurement assumptions (e.g. discount rate and inflation rate) are immediately recognised as part of 'other economic flows – included in the operating result'. The other components of the expense are recognised in 'expenses from transactions'.

#### Other Liabilities

All other liabilities are recorded at the estimates of obligation to pay.

Up-front payments received in respect of privately financed projects, are deferred and amortised over the term of the arrangement.

The value of a liability for Aboriginal land claims granted has been recognised equivalent to the estimated value of the related assets.

#### **Budgeted Amounts**

The budgeted amounts are disclosed for the primary financial statements where they are presented to Parliament. At present, only a budget for the General Government Sector is presented to Parliament. The budget disclosed is the original / first budget presented to Parliament in respect of the financial year, and excludes forward estimates presented previously. The budgeted financial statements are presented on a basis consistent with AASB 1049.

### **Disaggregated Sector Information**

Disaggregated primary financial statements are provided for the General Government Sector, PTE and PFE sectors as a note to the Total State Sector Accounts. These financial statements are prepared consistent with the accounting policies adopted in the Total State Sector Accounts. This sector information is determined before consolidation eliminations, and includes GFS type fiscal aggregates and reconciliations.

#### **Correction of Prior Period Errors**

The 2009-10 financial statements have been revised to reflect corrections of prior period errors in accordance with AASB 108 *Accounting Policies, Changes in Accounting Estimates and Errors.* 

AASB 108 requires the correction of prior period errors retrospectively, subject to certain limitations, to permit comparability with the current year. The retrospective adjustment occurs by restating the comparative amount in the prior period, or, if the event occurred before the earliest prior period presented, by restating the opening balances of assets, liabilities, and equity for the earliest prior period presented.

Note 28 to this report includes the 2009-10 financial statements with the line items affected by corrections of prior period errors, and an explanation of the material differences for the amounts reported in the audited 2009-10 Total State Sector Accounts.

#### **Revisions to Estimates**

Changes in accounting estimates are recognised in the period when the estimate is revised. Such changes are not adjusted retrospectively to the financial statements. Note 28 to this report includes information on the financial impact of these changes.

#### **Changes in Accounting Policy**

The main accounting policy changes are outlined below. Note 28 to this report includes information on the financial impact of these changes and its affect on the line disclosures in the primary financial statements.

#### **Long-term Land Leases**

In 2010-11 as a result of amendments to AASB 117 *Leases*, the State changed its accounting policy on long-term land leases in which it is the lessor.

AASB 117 now requires a land lease, to be classified as a finance lease if it transfers to the lessee substantially all the risks and rewards incidental to ownership of the land. Previously, AASB 117 normally required such leases to be classified as operating leases.

The revised accounting policy requires a lessor to classify a long-term land lease as a finance lease rather than an operating lease if, at the inception of the lease, the present value of:

- the the minium lease payments amounts to substantially all of the fair value of the leased land and
- the lessor's residual risks and rewards after the end of the lease term is not significant.

Under the revised policy, a prepaid long-term land lease is effectively accounted for as a sale.

In accordance with the transitional provisions of AASB 117 (as amended), the State reassessed the classification of the land elements of unexpired leases as at 1 July 2010 on the basis of information existing at the inception of those leases, where such information was available. Where a lease was reclassified as a finance lease (or, if the lease was prepaid, a sale) the adjustment was recognised, where practicable retrospectively, in accordance with AASB 108 *Accounting Policies, Changes in Accounting Estimates and Errors*.

Where information was not available to apply the amendments retrospectively, the amendments were applied on the basis of facts and circumstances as at 1 July 2010, the asset and liability relating to the newly classified finance lease were recognised at their fair values on that date, and any difference between those fair values was recognised in retained earnings.

Total Receivables	5,785	6,176	6,763	6,775

<sup>(</sup>a) Generally trade receivables from sale of goods and services are non-interest bearing with varying terms based on prevalent industry practice.

# Note 7: Income Tax Equivalents

Commerical PNFCs and PFCs are part of a National Tax Equivalent Regime, (NTER). Although exempt from income tax obligations to the Australian Government, members of the NTER accrue and pay income tax equivalents to the State, and adopt tax effect accounting, to maintain competitive neutrality for commerical government entities. The general government sector recognises accrued receivables and payables which equate to the amounts accrued by PNFCs and PFCs for income tax equivalents. These amounts are eliminated on consolidation of the Total State Sector.

5 - 42 Total State Sector Accounts

<sup>(</sup>b) Levies receivable under the Workers' Compensation (Dust Diseases) Act, 1942 reflect the full funding of total claim liabilities as estimated by actuaries at the reporting date. This recognises the legislative power given to the State, to impose levies to meet the cost of claim obligations under this Act.

<sup>(</sup>c) Taxation receivables at June 2011 include a \$557 million (2010 \$532 million) one-off stamp duty assessment, including interest, which is subject to appeal in the Supreme Court. An allowance for impairment of \$143 million (2010 nil) has been recognised.

<sup>(</sup>d) The remaining allowance for impairment mainly comprises doubtful debts related to the sales of goods and services.

5 - 44

#### (b) Snowy Hydro Ltd

Snowy Hydro Ltd is an unlisted public company limited by guarantee. New South Wales has a 58 per cent share of Snowy Hydro Ltd, with the Commonwealth and Victorian governments retaining 13 per cent and 29 per cent respectively. It does not control the entity, with one of up to nine board directors. Thus, as New South Wales does not control the entity it has applied the equity method to account for its investment in Snowy Hydro Ltd.

Snowy Hydro Ltd is mainly involved in generating and marketing renewable electricity, as well as the storage and diversion of bulk water to the Murray and Murrumbidgee Rivers. There is no published quotation price for the fair value of this investment.

The reporting date of Snowy Hydro Ltd approximates that of the Total State Sector Accounts. The difference between the reporting periods is less than 3 months (in this instance a few days) with the length of the reporting periods and any difference in the reporting dates being approximately the same from period to period.

There were no impairment losses relating to the investment in Snowy Hydro Ltd, however there were capital and other commitments as follows:

	General			
	Government Sector		Total State Sector	
	2011 2010		2011	2010
	\$m	\$m	\$m	\$m

#### (c) Law Courts Ltd

New South Wales has a 52.5 per cent share of Law Courts Ltd along with the Commonwealth retaining the remaining 47.5 per cent. Each jurisdiction has appointed 3 directors in accordance with the company's constitution. Thus as New South Wales does not control the entity it has applied the equity method to account for its investment in Law Courts Ltd.

Law Courts Ltd is an unlisted public company, limited by guarantee that was incorporated in Australia, to provide building management services for the Law Courts Building in Queen Square, Sydney. There is no published quotation price for the fair value of this investment. New South Wales recognises its investment based upon 52.5 per cent of Law Courts Ltd's net assets reported in its financial statements.

The reporting date of Law Courts Ltd is the same as the Total State Sector Accounts.

There were no impairment losses relating to the investment in the Law Courts Ltd. There were no material other expenditure commitments. NSW's share of capital commitments at 30 June 2011 was \$43 million (2010 \$33 million).

The following table illustrates summarised information of New South Wales' investment in Law Courts Ltd:

Depreciation expense	(5,218)
Other movements (inc.amortisation of leased assets)	(855)
Net carrying amount at end of year	234,955

During 2010-11, the revaluations included the following:

- Rail Corporation New South Wales revalued its Trackwork and infrastructure upwards by \$3,288 million at depreciated replacement cost (current replacement cost less accumulated depreciation). In addition buildings were revalued upwards by \$1,157 million using the replacement cost of the assets' remaining economic benefit based on a modern equivalent asset.
- The State revalued its electricity transmission and distribution assets upwards by \$1,368 million using the Optimised Depreciated Replacement Cost. This valuation method establishes the current replacement cost of the modern equivalent of assets in service at the valuation date. The concept of modern equivalent assets refers to assets that would be employed if the network were to be rebuilt today. The State depreciates the adjusted replacement cost to reflect the remaining effective life of the assets in service, and adjusts the current replacement cost for over-design, over-capacity and redundant assets (optimisations).
- The State revalued its generator assets downwards by \$1,241 million, primarily for power stations that were leased under generation trading agreements. This was calculated on the basis of expected proceeds from the finance lease.

During 2009 -10, the revaluations included the following:

- NSW Land & Housing Corporation revalued its residential property portfolio, including residential land held for redevelopment upwards by \$2,907 million due to an upward movement in the residential property market. Fair value of property, plant and equipment is determined based on best available market evidence including current market selling prices for same or similar assets.
- Essential Energy revalued its electricity systems assets upwards by \$1,213 million using the Optimised Depreciated Replacement Cost valuation technique. The replacement cost is the minimum that it would cost to replace the existing asset with a technologically modern equivalent new asset with the same economic benefits. This is adjusted for overdesign, overcapacity and redundant components less accumulated depreciation reflecting the already consumed future economic benefits of the asset.
- Transgrid revalued upwards its network assets by \$513 million. The Australian Competition Tribunal granted TransGrid an increase in prescribed revenue for the 2009-10 to 2013-14 regulatory period.
- The Roads and Traffic Authority, a general government sector entity, revalued its earthworks infrastructure deemed to have an indefinite life for depreciation purposes, resulting in a valuation increment of \$4,298 million.

Olympic Arena	31 / 2031
Olympic Stadium	32 / 2031
Opera House car park	50 / 2043
Various hospital car parks	25 / various

In these arrangements, the grantor gives the service concession in exchange for the right to receive the infrastructure from the operator at the end of the concession period. The operator is required to design, finance and build the infrastructure and use it to provide services directly to the public during the concession period. The operator is permitted to charge the public for the services it provides.

SCA infrastructure is operator-controlled during the concession period and grantor-controlled thereafter. Therefore, during the concession period, the grantor recognises an emerging asset and revenue for its right to receive the infrastructure. At the end of the concession period, the grantor recognises the transferred infrastructure as property, plant and equipment and commences depreciating it.

The grantor normally leases the underlying land to the operator for a nominal or commercial rental during the concession period. In many cases, the operator also pays a up-front contribution to the grantor and, in a few cases, the grantor pays an up-front contribution to the operator. Sometimes the grantor receives a share of the operator's revenue. However, there are not expected to be future cash flows from the grantor to the operator under any of the present SCAs.

<sup>(</sup>a) In 2010-11, Eraring Energy and Delta Electricity entered into respective Generation Trading Agreements (GTAs) with Origin Energy and TRUenergy (referred to as Gentraders) to sell the trading rights of Eraring, Shoalhaven, Mount Piper and Wallerawang power stations The Gentraders paid a total of \$1,321 million in four deposits to the Crown. The deposits earn interest.

The Gentraders have directed the Crown (and the Crown has agreed) to use the deposits to pay the annual capacity charges (and other amounts to the relevant GTAs) to repay Eraring Energy and Delta Electricity's finance lease receivable (refer Note 8). If Eraring Energy or Delta Electricity default, and the Gentrader terminates the GTA, the Gentrader may recover the unspent portion of the deposits on termination of the GTA.

<sup>(</sup>a) Derivative Electricity Hedging Contracts

It is the policy of state-owned electricity generators to hedge their risk associated with fluctuations in the sale price of electricity into the national electricity market. This is by entering into derivative contracts with wholesale electricity market counterparties.

These derivatives are marked to market and their fair values are measured based on industry accepted valuation methodologies and a forward curve, in accordance with AASB 139 Financial Instruments: Recognition and Measurement.

The State (Total State Sector) has an agreement for a Rail Rollingstock Public Private Partnership, which constitutes a finance lease. These assets and the associated finance lease liabilities are recognised on completion and delivery of assets progressively. As at 30 June 2011, a finance lease liability of \$27 million (2010 Nil) is recognised for the rolling stock assets. The finance lease liability and aggregate minimum lease payments total \$9,749 million in nominal dollars (2010 \$9,727 million) or \$3,650 million (in net present value as at 30 June 2006). In addition, as at 30 June 2011 a finance lease liability of \$229 million (2010 \$219 million) is recognised in relation to the provision of a related maintenance facility.

The State has entered into contracts with a private sector group to redevelop the Bonnyrigg Public Housing Estate. The project is expected to be completed in stages over period of 12 years. The net present value of the project is estimated at \$368 million (2010 \$368 million). As at 30 June 2011, a finance lease liability of \$35 million (2010 \$28 million) is recognised in relation to this project. The future finance leases liabilities and commitments will be recognised on completion and delivery of assets progressively.

# **Unfunded Superannuation Liability**

The following note provides information about the State's defined benefits superannuation schemes. This note contains information on:

- the various superannuation schemes
- major economic assumptions
- the movement in 2010-11 liabilities and the impact of assumptions
- composition of the unfunded liabilities by scheme, recognised in the statement of financial position, and member numbers
- historical information of combined schemes' cumulative gains, obligations and fund assets
- the annual movement by scheme in defined benefit obligations
- the annual movement by scheme in the fair value of fund assets
- annual superannuation expense
- actual return on plan assets
- fund assets (by asset class)
- funding arrangements for employer contributions. This includes the scheme liabilities as reported by the trustees (using different discount rates), recommended contribution rates, funding method, and economic assumptions
- nature of asset/liability.

#### **NSW Public Sector Defined Benefit Superannuation Schemes**

State public sector superannuation liability is made up of the assets and liabilities of the following schemes:

- State Authorities Non Contributory Superannuation Scheme (SANCS)
- Police Superannuation Scheme (PSS)
- State Authorities Superannuation Scheme (SASS)
- State Superannuation Scheme (SSS)
- Energy Industries Superannuation Schemes (EISS)
- Judges' Pension Scheme (JPS), and
- Parliamentary Contributory Superannuation Scheme (PCSS).

All of the above schemes (except for JPS) are closed to new entrants.

Management is assisted by the actuary in calculating the unfunded liability. The SAS Trustee Corporation's (STC) actuary Mercer Human Resource Consulting calculated the unfunded liabilities of the State Public Sector superannuation schemes for the year ended 30 June 2011 and 30 June 2010 under AASB 119 *Employee Benefits* and AAS 25 *Financial Reporting by Superannuation Plans*.

SASS, SSS, PSS and SANCS, the State Super Fund schemes are all defined benefit schemes – at least a component of the final benefit is derived from a multiple of member salary and years of membership. These schemes are closed to new members.

The Projected Unit Credit (PUC) valuation method was used to determine the present value of the defined benefit obligations and related current service costs. This method sees each period of service as giving rise to an additional unit of benefit entitlement and measures each unit separately to build up the final obligations.

Actuarial gains and losses are recognised through 'other economic flows – other comprehensive income'.

All Fund assets are invested in STC at arm's length through independent fund managers.

The estimate of accrued benefit liabilities of the Total State Sector is based on calculations carried out by Mercer Human Resource Consulting, the STC's actuary. Actuarial calculations were based on scheme membership data as at 30 April 2011 (EISS 30 June 2010) projected to 30 June 2011. The fair value of pooled fund assets comprises the actual June 2011 balance.

The principal economic assumptions at the reporting dates are as per the following tables.

MAJOR ECONOMIC ASSUMPTIONS	30 June 2011	30 June 2010
State Super Fund Schemes		
Discount rate at 30 June	5.28% pa	5.17% pa
Expected return on assets	8.6%	8.6%
Expected salary increases	3.5% pa	3.5% pa
Expected rate of CPI increases	2.5% pa	2.5% pa
EISS		
Discount rate at 30 June	5.28% pa	5.17% pa
Expected return on assets	8.1%	8.1%
Expected salary increases	4.0%	4.0%
Expected rate of CPI increases	2.5% pa	2.5% pa

The unfunded superannuation liabilities shown are for employers and employees combined and are the difference between the present value of forecast employees' accrued benefits at balance date and the estimated net market value of scheme assets to meet them at that date.

An employer does not have to recognise the Future Service Liability, as this is used to determine if there should be an asset ceiling limit (AASB 119, paragraph 58). Under AASB 119, any recognised prepaid superannuation asset cannot be more than the total unrecognised past service cost and the present value of any available economic benefits in plan refunds or future plan contribution reductions. If there is no surplus in excess of recovery, an asset ceiling limit is not imposed.

#### Movement in the 2010-11 Unfunded Liabilities and the Impact of Assumptions

The small fall of \$0.4 billion in general government and \$0.5 billion for total state sector unfunded liabilities over the twelve months to 30 June 2011, is largely explained by the effect of several factors:

- a rise in the State Super Fund liability discount rate from 5.17 per cent to 5.28 per cent (EISS 5.17 per cent to 5.28 per cent), and
- 2010-11 Pooled Fund earnings rates of 8.7 per cent (EISS 11.1 per cent), which are slightly above the long term average fund earnings.

The reduction in liability has been partly offset by:

- an increase in the accrued benefits due to an additional year of service being provided by current State Super Fund scheme contributors.
- one year less discounting for the present value of total future benefit payments.

The major potential for volatility arises from:

- movements in the market prices of plan assets, and
- the 30 June long-term Commonwealth government bond rate, which is applied to discount the accrued liabilities.

The future liability value can also be impacted, generally to a lesser degree, by revisions to long-term actuarial assumptions including those listed in the previous table, as well as changes to mortality and other actuarially applied rates.

Due to the number of variables it is impracticable to provide a meaningful sensitivity analysis on the volatility of the defined benefit superannuation liabilities for changes in assumptions.

	4,450	1,491	19,042	6,343	272	735	32,333			
Future Service Liability (b)	(1,641)	(655)	(776)	(203)			(3,275)			
Adjustment for limitation on net asset										
Net (asset)/liability disclosed in balance sheet	4,450	1,491	19,042	6,343	272	735	32,333			

<sup>(</sup>a) The accrued benefits liability less the net market value of scheme assets represents the defined benefits obligation of the State. For SASS, it includes the accumulation component (i.e. employee accrued benefit liabilities and equivalent employee scheme assets).

<sup>(</sup>b) The Future Service Liability (FSL) does not have to be recognised by an employer. It is only used to determine if an asset ceiling limit should be imposed (AASB 119, para 58). Under AASB 119, any prepaid superannuation asset recognised cannot exceed the total of any unrecognised past service cost and the present value of any economic benefits that may be available in the form of refunds from the plan or reductions in future contributions to the plan. Where the "surplus in excess of recovery" is zero, no asset ceiling limit is imposed.

	50,653	31,870	18,783

	Ac c rued Benefits	Net Market Value of Fund Assets	Net (surplus)/deficit
	2010	2010	2010
NSW Public Sector Superannuation Scheme	\$m	\$m	\$m
State Super Fund			
State Authorities Superannuation Scheme	11,744	7,993	3,751
State Authorities Non Contributory Superannuation Scheme	2,506	1,270	1,236
State Superannuation Scheme	25,751	16,460	9,291
Police Superannuation Scheme	6,350	2,874	3,476
Judges' Pension Scheme	493		493
Parliamentary Contributory Superannuation Scheme	354	207	147
Energy Industries Superannuation Scheme	1,747	1,550	197
	48,945	30,354	18,591

The primary difference between the net deficit above (per AAS 25) and the net deficit calculated in accordance with AASB 119 (and brought to account in the Total State Sector Account's statement of financial position) is that the accrued benefits discount rate is based on the more volatile 30 June long term Commonwealth government bond rate for the AASB 119 calculation, whereas the AAS 25 calculation uses a less volatile long term earnings rate.

#### **Funding Method**

The method used to determine the employer contribution recommendations at last actuarial review was the Aggregate Funding method. The method adopted affects the timing of the costs to the employer. Under the Aggregate Funding method, the employer contributions rate is determined so that sufficient assets will be available to meet benefit payments to existing members, taking into account the current value of assets and future contributions.

#### **Economic Assumptions**

The economic assumptions adopted for the 2009 actuarial review were:

	2011	2010
State Super Fund		
Weighted-Average Assumption		
Expected rate of return on assets backing current pension liabilities	8.3% pa	8.3% pa
Expected rate of return on assets backing other liabilities	7.3% pa	7.3% pa
Expected salary increase rate	4.0% pa	4.0% pa
Expected rate of CPI increase	2.5% pa	2.5% pa
Energy Industries Superannuation Scheme		
Weighted-Average Assumption		
Expected rate of return on Fund Assets	7.0% pa	7.0% pa
Expected salary increase rate	4.0% pa	4.0% pa
Expected rate of CPI increase	2.5% pa	2.5% pa

#### Nature of asset/liability

If a surplus exists in the employer's interest in the Fund, the employer may be able to take advantage of it in the form of a reduction in the required contribution rate, depending on the approval of the Fund's trustee, based on advice of the Fund's actuary. Where a deficiency exists, the employer is responsible for any differences between the employer's share of fund assets and the defined benefit obligation.

Note 25: Other Provisions

Other	171	140	557	513	
Total Other Provisions	5,878	5,717	7,939	7,326	
Insurance Recoveries Receivable include those accrued by:					
Self Insurance Corporation - for reinsurance and other					
recoveries receivable	229	243	229	243	
Workers' Compensation (Dust Diseases) Board -					
insurance levies accrued	1,012	979	1,012	979	
	1,241	1,222	1,241	1,222	

Other provisions include for example, the State's obligations arising from several insurance schemes:

• Managed by the NSW Self Insurance Corporation (SICorp). These comprise liabilities for closed schemes for the previous workers compensation and third party insurance schemes, for home warranty insurance, and for the Treasury Managed Fund, a self insurance scheme. The Treasury Managed Fund protects the insurable assets and exposures of all public sector agencies financially dependent on the Consolidated Fund, all public hospitals and various statutory authorities.

The liability for outstanding claims is measured as the present value of the expected future payments and is determined by the Manager of SICorp in consultation with independent actuary, PricewaterhouseCoopers Actuarial Pty Ltd. The discount rate used is based on Treasury Corporation and NSW Treasury's estimate of fair value for the long term bond rate.

The expected future payments are estimated on the basis of the ultimate cost of settling claims, which is affected by factors arising during the period to settlement such as normal inflation and 'superimposed inflation'. Superimposed inflation refers to factors such as trends in court awards

- Workers' Compensation (Dust Diseases) Board and WorkCover Authority outstanding claims: The WorkCover Authority liabilities includes claims assumed by the State from some failed insurance companies. The liabilities cover claims incurred but not yet paid, incurred but not yet reported and the anticipated fund management fees in respect of the management of those claims. These amounts are determined by independent actuarial consultants PricewaterhouseCoopers Actuarial Pty Ltd and Ernst & Young ABC Pty Ltd respectively. The liability is measured as the present value of the expected future payments.
- Provision for participants care and support services for persons catastrophically injured from motor accidents in NSW under the *Motor Accidents (Lifetime Care and Support) Act 2006*. At 30 June 2011, liabilities were valued by the actuaries PricewaterhouseCoopers as the present value of the expected future payments.
- A provision for loss compensation associated with the former HIH Insurance Limited has been raised by the State for building warranty insurance and for motor vehicle claims for which the Nominal Defendant is responsible under the *Motor Accidents Compensation Act 1999*. The liability is measured by the actuaries, Taylor Fry Pty Ltd as the present value of the expected future payments.
- The Building and Construction Industry Long Service Payments Scheme liabilities have been assessed based upon a full actuarial investigation that was undertaken at 30 June 2010 by Professional Financial Solutions. As at 30 June 2011, Professional Financial Solutions has undertaken an actuarial update.

Key actuarial assumptions for the main schemes are:

• For schemes administered by SICorp the following average inflation rates and discount rates were used in measuring the liability for outstanding claims for NSW Treasury Managed Fund (TMF), Transport Accident Compensation Fund (TAC) and Governmental Workers Compensation Account (GWC):

	TMF		GWC		TAC	
	2011	2010	2010 2011		2011	2010
	%	%	%	%	%	%
Not Later than one year						
Inflation Rate	2.5-4.0	2.5-4.0	4.4	3.0	4.4	3.0
Discount Rate	6.0	6.0	6.0	6.0	6.0	6.0
Superimposed Inflation (a)	0-3.0	0-4.0	0-2.5	0-2.5	0-5.0	0-5.0
Later than one year						
Inflation Rate	2.5-4.0	2.5-4.0	3.8-4.7	3.6-3.9	3.8-4.7	3.6-3.9
Discount Rate	6.0	6.0	6.0	6.0	6.0	6.0
Superimposed Inflation (a)	0-3.0	0-4.0	0-2.5	0-2.5	0-4.0	0-4.0

a) Dependent on payment type

For other Schemes details are as follows:

Scheme	Discoun	t Rate %	Inflation Rate %	
	2011	2010	2011	2010
Claims expected to be paid not later than one year				
Workers Compensation (Dust Diseases) Board	6.0	5.8	4.0	3.8
WorkCover Authority	4.8	4.5	4.0	3.5
HIH Loss Compensation	4.8	4.5	3.8	3.0(4.0*)
Building and Construction Industry Long Service Payment Scheme	5.2	4.7	4	4
Lifetime Care and Support	6.0	6.0	4.0	4.0
Claims expected to be paid later than one year				
Workers' Compensation (Dust Diseases) Board	6.0	5.8	4.0	3.8
WorkCover Authority	4.80-5.90	4.5-6	3.45-4.00	3.5-4.05
HIH Loss Compensation	4.8-5.8	4.5-5.7	3.8	4.25(4.0*)
Building and Construction Industry Long Service Payments Scheme	5.2	4.7	4	4
Lifetime Care and Support	6.0	6.0	4.0	4.0

The discount rate for each scheme reflects current market assessments of the time value of money, and the risks specific to the liability.

		General Government Sector		e Sector

<sup>(</sup>a) The State has provided for the liability of claims that have been granted to local Aboriginal Land Councils under the *Aboriginal Land Rights Act 1983*.

<sup>(</sup>b) The State under various Private Sector Provided Infrastructure transactions received payments following the letting of the Lane Cove Tunnel, Cross City Tunnel and Westlink M7 Motorway contracts, as reimbursement of development costs. These up-front payments are amortised over the term of the arrangement rather than recognised as revenue up-front.

## Note 27: Net Worth (Equity)

The State's equity is classified into accumulated funds and reserves.

Accumulated funds comprises current and prior period retained funds, including the State's contributed equity in the public trading and financial enterprises.

The reserves are:

- Asset Revaluation Reserve: This reserve is used to record increments and decrements on the State's revaluation of non-current assets. This accords with the policy on the revaluation of property, plant and equipment as discussed in Note 1.
- Equity Investment Revaluation Reserve: This reserve comprises the State's share of the asset revaluation reserve of investments in associates.
- Hedging Reserve: This comprises the cumulative gains and losses on the effective portion of cash flow hedges. The gains/losses remain in the reserve until the hedged forecast cash flow affect the operating result, and are recycled into 'other economic flows included in the operating result'.
- Available for Sale Reserve: This primarily comprises the general government sector's revaluation reserve for its equity investment in the public non financial corporation, and public financial corporation sectors.
- Amounts Held in Equity Associated with Assets Held for Sale: This comprises the asset revaluation reserve component of assets classified as held for sale.
- The Statement of Changes in Equity at the start of this report discloses information on equity movements by class. Statements of Changes in Equity for each sector of government are also reported in Note 36 Disaggregated Financial Statements.

# Note 28: Restated Comparative Financial Statements due to changes in Accounting Policies, Corrections of Prior Period Errors, and Discontinued Operations

The following tables report the 2009-10 financial statements restated on a line item basis in this report, comparing them from those published in the audited 2009-10 Total State Sector Accounts. The column headed 'corrections and policy changes' relates to corrections of errors and changes in accounting policy that have been adjusted to the 2009-10 comparatives.

The 2009-10 Total State Sector and General Government Sector comprehensive results (a surplus) have basically remained constant at a \$10,750 million surplus compared to the result published in the 2009-10 Total State Sector Accounts. The following adjustments to disclosures have been made.

#### **Changes in Accounting Policy**

#### General Government and Total State Sectors

As a result of amendments to AASB 117 *Leases*, in 2010-11 the State changed its accounting policy on long-term land leases in which it is the lessor. Refer to Note 1 'Changes in Accounting Policies' for further details.

- The impact of this change in accounting policy on the General Government Sector has resulted in a increase in 30 June 2010 net worth of \$955 million (\$954 million at 1 July 2009). This includes the writing back of deferred revenue (other liabilities) and land assets, an increase in the equity investments in other public sector entities, and the establishment of finance leases receivable (financial assets at fair value) The 2009-10 general government sector comprehensive result has increased by \$1 million.
- The impact of this change in accounting policy on the Total State Sector has resulted in an increase in net worth of \$955 million (\$954 million at 1 July 2009). This includes the writing back of deferred revenue (other liabilities), investment properties and land assets, and the establishment of finance leases receivable (financial assets at fair value) The 2009-10 total state sector comprehensive result has increased by \$1 million.

#### **Corrections of Errors**

#### General Government and Total State Sectors

The State has recognised for the first time some coastal infrastructure assets and roads over railway bridges. Although the State previously recognised the cost of maintaining these assets, the assets were incorrectly omitted from the statement of financial position. The first time recognition increases infrastructure assets by \$574 million at 30 June 2010 (\$574 million at 1 July 2009).

#### **Reclassification of Discontinuing Operations**

In addition to changes from corrections of errors and revised/new accounting policies, the line items in the Statement of Comprehensive Income disclosed in this report have changed from those published in the 2009-10 Total State Sector Accounts. This change results because accounting standards require the reclassification of previous year revenue and expenses for discontinuing operations, to an aggregate result for 'transactions from discontinuing operations' at the foot of the statement. This change in classification affects line by line presentation, however does not impact the operating result in the Statement of Comprehensive Income. While the changes do not relate to any corrections of errors, nor from changes in accounting policy, they are disclosed for completeness to reconcile to the statement of comprehensive income, (and Note 35 Discontinuing Operations) as published in the 2009-10 Total State Sector Accounts.

#### Impact on the 30 June 2009 Statement of Financial Position

The above corrections of error and changes in accounting policy have impacted the previous year's opening statement of financial position as follows:

Corrections of errors resulted in an increase in infrastructure assets, and accumulated funds of \$574 million for both the general government sector (GGS) and total state sector (TSS).

The change in accounting policy resulted in

- an increase in GGS financial assets at fair value \$191 million (TSS \$325 million)
- an increase in GGS investments in other public sector entities \$432 million (TSS nil)
- a reduction in GGS land and buildings of \$189 million (TSS \$219 million)
- a reduction in GGS investment properties of nil (TSS \$198 million)
- a reduction in GGS other liabilities \$520 million (TSS \$1,046 million)
- an increase in GGS accumulated funds of \$522 million (TSS(\$954 million)
- an increase in GGS reserves of \$432 million (TSS nil).

#### **Changes in Accounting Estimates**

Changes in accounting estimates are recognised in the period when the estimate is revised. Such changes are not adjusted retrospectively to the financial statements.

#### **General Government and Total State Sectors**

There are no material changes in accounting estimates to disclose for 2010-11.

#### Note 29: Cash Flow Information

## Reconciliation of Operating Result to Net Cash Flows from Operating Activities

	Gen			
	Governme	ent Sector	<b>Total State Sector</b>	
	2010-11	2009-10	2010-11	2009-10
	\$m	\$m	\$m	\$m
Operating result for the year	4,579	2,633	4,733	2,897
Adjust for:				
Non-cash items added back:				
Depreciation and amortisation	2,818	2,769	5,958	5,623
Other	(299)	108	557	(52)
Other economic flows - included in the operating result	(3,239)	(1,644)	(3,484)	1,011
Net change in operating assets and liabilities	1,324	520	1,596	1,302
Net cash flows from operating activities	5,183	4,386	9,360	10,781

#### Reconciliation of Closing Cash and Cash Equivalents

Cash assets in the statement of financial position comprise cash and deposits at call. Deposits in TCorp Hour-Glass cash facilities and other TCorp deposits with a maturity of less than 90 days, are reported as cash and deposits at call.

Cash and cash equivalent assets recognised in the statement of financial position are reconciled at the end of the financial year to the Statement of Cash Flows as follows:

	General			
	Governm	ent Sector	Total Sta	te Sector
	2011	2010	2011	2010
	\$m	\$m	\$m	\$m
Cash and deposits at call	8,258	3,071	11,758	6,299
Short term borrowings of Tcorp				(95)
Bank overdraft			(2)	(10)
	8,258	3,071	11,756	6,194

#### **Restricted Cash Assets**

#### **General Government Sector and Total State Sector**

Agency cash balances at 30 June 2011 include cash, for the general government sector \$1,410 million (2010 \$1,425 million) and for the total state sector \$1,498 million (2010 \$1,428 million), which is dedicated for a specific purpose. It includes restricted cash of \$835 million (2010 \$760 million) under the control of the public health system, \$40 million of education program contributions (2010 \$38 million), and \$167 million (2010 \$127 million) for land remediation works.

\$347 million (2010 \$273 million) of cash held in Crown Special Deposit Accounts can only be used in accordance with the legislation that established the Account. Conditional contributions disclosed in Note 2 are also considered restricted assets. On consolidation of the general government sector, agency cash balances within the Treasury Banking System are offset against the Crown's cash overdraft for cash management purposes.

#### **Disposal of Entities**

Note 35 Discontinuing Operations, details information on the proceeds from the sale in 2010-11 of WSN Environmental Solutions and the State's retail electricity operations and for 2009-10 of NSW Lotteries Corporation.

#### **Acquisition of Entities**

During 2010-11 and 2009-10 there were no major acquisitions of entities.

#### Non-Cash Financing and Investing Activities

During 2010-11:

- A total of \$170 million (2010 \$157 million) was recognised in the Total State sector for an emerging interest in private sector provided infrastructure. In the General Government sector, a total of \$166 million was recognised (\$153 million in 2010). It includes \$138 million recognised for roads (2010 \$120 million) and \$27 million for Olympic Park infrastructure (2010 \$26 million).
- Other assets acquired free of cost in the Total State sector amounted to \$364 million (2010 \$559 million). In the General Government sector, they amounted to \$278 million (2010 \$402 million). They include subdivider/developer contributions of water assets of \$59 million (2010 \$80 million) and electricity assets of \$116 million (2010 \$92 million) and roads and bridges from Local Councils to the value of \$98 million (2010 \$313 million).
- It is impracticable to report on the numerous other assets donated to NSW public sector agencies
  particularly dedicated for health, education and cultural purposes. They are generally reported in
  individual agency financial statements.

The Total State sector statement of cash flows excludes new assets acquired under finance leases with a value of \$547 million (2010 \$463 million). For the General Government sector, excluded finance lease assets amount to \$510 million (2010 \$244 million). The General Government sector comprises some leases for new buses, the Mater Hospital at Newcastle and the Long Bay Forensic Hospital. In addition, the Total State Sector includes the Colongra Gas Pipeline lease.

Note 30: Trusts Under Management

	General			
	Governme	nt Sector	Total Sta	te Sector
	2011	2010	2011	2010
	\$m	\$m	\$m	\$m
Trusts under management are held on behalf of beneficiaries and are not controlled by the State. Therefore, these trusts are not recognised as assets on the statements of financial position.				
Trusts under management mainly comprise various forms of estates under management, unclaimed monies and Supreme Court trust funds held in statutory accounts by the:				
NSW Trustee and Guardian <sup>(a)</sup>	2,499	2,561	2,499	2,561
NSW Treasury Corporation (fiduciary investments)			2,142	1,711

## Note 32: Contingent Assets and Liabilities

Contingent assets and liabilities are possible future assets or liabilities that may arise from past events. The existence of these assets or liabilities will only be confirmed by the occurrence or non-occurrence of one or more future events not wholly in control of the State. In this report, contingent assets and liabilities have been classified into quantifiable, where the economic effect is known, or non-quantifiable.

The State, on occasion, provides guarantees and indemnities. These are listed below.

## **Contingent Liabilities**

	General					
	Government Sector			Total State Sector		
	2011 2010		2011	2010		
	\$m	\$m	\$m	\$m		
(A) Quantifiable Contingent Liabilities						
Department of Attorney General and Justice (Victim's compensation and other claims)	241	225	241	225		
Roads and Traffic Authority (contractual claims and litigation)	109	78	109	78		
NSW Land and Housing Corporation (claims in respect of compensation and litigation)	12	1	12	1		
Land and Property Management Authority (disputed claims)		17		17		
Sydney Water (claims in respect of compensation and litigation)			8	8		
Other agencies	6	6	9	15		
TOTAL	368	327	379	344		

#### (B) Non-quantifiable Contingent Liabilities

#### **General Government Sector**

Unless otherwise stated, the General Government contingent liabilities are also applicable to the Total State Sector. Included in these are:

The State has a contingent liability under the *Native Title Act 1993 (Commonwealth)* and the *Native Title (New South Wales) Act 1994.* The extent of the liability cannot be quantified.

The liability arises as follows:

- Liability of the State to pay compensation to native title holders in respect to past acts and intermediate period acts (i.e. acts undertaken between October 1975 and December 1996 which were invalid because of native title) which were validated by operation of the Native Title Act 1993 and the Native Title (New South Wales) Act 1994.
- Liability of the State to pay compensation to native title holders arising from the undertaking of
  future acts (i.e. acts which affect native title undertaken after 1 January 1994 and for which the
  Native Title Act 1993 provides that compensation is payable) by the State and its instrumentalities.

[The State has an indemnity under Section 104 of the *Native Title (New South Wales) Act* in respect to compensation arising from a compulsory acquisition of native title by an authority which is not the Crown in the right of the State.]

- The assets of the State in the form of Crown land and water may be reduced in value in the event that native title is determined to exist in all or any of these assets. The extent of the reduction in value cannot be quantified.
- The assets of the State in the form of reserved Crown land may be reduced in value by operation of the *Aboriginal Land Rights Act 1983 (NSW)*. Under that legislation a land council can apply for the grant of the freehold of claimable Crown land (as defined in Section 36 (1) of the Act) and the claim must be granted. Applications have been made over various areas of land and water in New South Wales, which might ultimately result in land being transferred for no consideration. These applications have not been finalised and it is therefore not possible to estimate the financial impact or result of the claims.
- It is likely that some parcels of Crown land may have been contaminated at some stage in the past. The State has identified at least 492 sites on untenured Crown land which are likely to be contaminated to some degree. Work is still to be undertaken to determine the nature and extent of any such contamination. This work will also assist in determining the likely impact of any contamination on the value of the land holdings. However, it is considered that the existence of contaminated sites will not have a material impact on the overall value of the State's land holdings.
- Based on the definition of control in AASB 127 Consolidated and Separate Financial Statements, Affiliated Health Organisations listed in Schedule 3 of the Health Service Act 1997 are only recognised in the Department of Health's Consolidated Financial Statements to the extent of cash payments made.
  - However, it is accepted that a contingent liability exists which may be realised in the event of cessation of health service activities by any affiliated health organisation.
  - In this event the determination of assets and liabilities would be dependent on any contractual relationship that may exist or be formulated between the administering bodies of the organisation and the Department of Health.
- The State has a contingent liability whereby some government authorities have claims against them for compensation for land acquired under the Land Acquisition (Just Terms Compensation) Act 1991. The estimated cost will be determined by the Land and Environment Court in due course.
- The State treats payments of unclaimed money to the Consolidated Fund as income. However, claims
  can be legally lodged for several years after the money is paid into the Fund. These future claims cannot
  be estimated.
- The lessee of certain property controlled by Sydney Local Health District (formerly Sydney South West Area Health Service) had been granted compensation on appeal for a matter previously judged in favour of Sydney Local Health District (SLHD) by the Supreme Court. The Court of Appeal ordered the lessee be restored to possession, entitling the lessee to an account of net revenue from the property since termination, or damages for being out of possession, less rental of more than \$4m which the lessee has not paid. Taking into account the many issues in the proceedings and overlap between them, SLHD was ordered to pay a portion of the lessee's court fees. The proceeding to determine the quantum of the claim is not expected to be heard for at least 12 months.

- As a condition of the sale of Pacific Power International Pty Ltd the State has an obligation to compensate the trustee of the Electricity Industry Superannuation Fund (EISS) if certain conditions exist at a certain time. The time will be the earlier of:
  - Connell Wagner (the purchaser) ceasing to be an employer in the fund; or
  - the last benefit is paid; or
  - the relevant assets are exhausted.

If the liability arises there would only be one payment. The payment would be the lower of:

- the actual shortfall between fund assets and fund liabilities; and
- the potential shortfall, if anticipated investment returns of 4.5 per cent a year (excluding CPI) had not been realised.

At 30 June 2011, the net market value of assets was \$5 million less (2010 \$6 million) than the estimated value of liabilities due to negative investment returns during 2009-10.

The unfunded liability is different to both the actual fund shortfall and the investment return shortfall. Based on returns to June 2009, the scheme independent actuary estimated the actual fund shortfall to be approximately \$7 million (2010 \$7 million) and investment return shortfall approximately \$2 million (2010 \$2 million). The compensation payment is approximately \$2 million (2010 \$2 million).

- NSW Department of Health, together with ACT Health have recently conducted a clinical and resource costing audit. The audit assessed the reasonableness of the rapid increases in the number of separations/statistical discharges and same day admissions through ACT emergency departments for NSW patients since 2006-07. The result of the audit may lead to a potential liability owing to ACT Health, the amount of which is not yet quantifiable.
- Transport Construction Authority (TCA) is currently in litigation with Parramatta City Council over an
  acquisition of public roads in 2004. Parramatta City Council alleges that TCA infringed the Deed of
  Release and Settlement. The matter is not expected to be heard until early 2012.
- There is currently a shortfall in the funding for the defined benefit superannuation of universities within NSW. The State is currently negotiating a funding agreement with the Australian Government to meet this shortfall. At the date of this report the potential liability is not quantifiable.

#### **Total State Sector**

On 23 January 2008, the Public Transport and Ticketing Corporation (PTTC) terminated the contract with a contractor on the basis of an alleged failure to meet the requirements of the Project Agreement. Subsequently, PTTC lodged a claim against the contractor who has responded by lodging a cross claim against PTTC for breach of contract. PTTC has denied the claim and is defending the action. It is not practical to estimate the potential effect of this cross claim.

- State Corporations receive claims by suppliers for additional charges in the normal course of operations.
   A number of disputed claims are currently being heard in court. The quantum of these claims cannot accurately be determined.
- There is a claim against Forests NSW in relation to a timber supply contract. The matter is expected to be heard during 2011-12. The potential liability is unable to be determined.
- The State has a contingent liability arising from contractual obligations to sell coal from the planned Cobbora mine.

In February 2011, Cobbora Holding Company Pty Limited executed coal sales contracts with Origin Energy and two State owned corporations to supply coal to four of the State's power stations from 2016. The Company intends to establish the Cobbora mine to fulfil its contractual obligations. However, as the contracted prices are below the expected costs of production for the currently contracted volumes, it is possible that a net obligation may arise.

From a Total State Sector perspective, the Origin Energy contract is the only contract with an external third party. The revenues generated by the company from the contracts with the two State owned corporations will eliminate when consolidated into the Total State Sector accounts.

The financial effect cannot be reliably measured pending completion of the business plan.

#### (C) Guarantees and Indemnities

Guarantees have been provided to facilitate the provision of certain services and the construction of several infrastructure assets may give rise to contingent liabilities.

Guarantees are reported for the following sectors.

#### **General Government Sector**

Unless otherwise stated, the General Government guarantees are also applicable to the Total State Sector.

The major guarantees are:

- State guarantees given to various organisations under statute. They mainly relate to certain co-operative housing societies which the maximum exposure as at 30 June 2011 is \$47 million (2010 \$50 million).
- The State has an agreement with the Commonwealth to provide up to \$320 million of Commonwealth/State funding on a 50/50 basis for the Asbestos Injuries Compensation Fund. While James Hardie Industries NV retains full responsibility for repaying any funding provided, the state has a contingent liability to the extent that James Hardie is unable to repay this funding.

 With regard to the 2009-10 NSW Lotteries transaction, the State provided minimal warranties, indemnities and other obligations in favour of the operator.

As at 30 June 2011, the State has a contingent liability for unclaimed lottery prizes won on or before 29 March 2010, less an amount of \$6 million provided for. This resulted from the sale of NSW Lotteries on 31 March 2010. The provision taken up was based on historical data which showed that annual claims for unclaimed prizes were no more than \$1 million. In accordance with the *Public Lotteries Regulation 2007*, the State is liable for claims made on or before 1 December 2016. The State has therefore conservatively provided \$1 million per annum until 2016. However, future claims cannot be reliably measured and could exceed the current provision.

The State is liable for the direct losses incurred by NSW Lotteries if an adverse regulatory event occurs. The State's aggregate liability is capped. Adverse regulatory events are defined in the transaction documents and include, for example, the introduction by the State of new duties, taxes or other imposts on public lotteries in New South Wales without the agreement of the operator. There are no known adverse regulatory events as at the reporting date.

- Issued securities, borrowings and derivative liabilities of the NSW Treasury Corporation with a market value of \$60.3 billion (2010 \$57.3 billion) have been guaranteed by the NSW Government under the Public Authorities (Financial Arrangements) Act 1987.
- On 28 June 2002 the Commonwealth's Snowy Mountain Hydro–electric Authority and the electricity trading company, Snowy Hydro Trading Proprietary Limited were formed into a new public company, Snowy Hydro Limited (SHL). This is owned by NSW, Victoria, and the Commonwealth.

NSW owns 58 per cent share in the company and it has entered into guarantees, indemnities and deeds as part of the agreements leading to the corporatisation of the Snowy Scheme. It is not possible to estimate the amount of exposure at this time for the following situations.

If any change to the Snowy Water licence has an adverse financial impact for SHL, the company will receive that corresponding amount in compensation. NSW may recover 42 per cent of this compensation if Victoria and the Commonwealth agree to water licence changes. No major amendments to the Snowy Licence are currently proposed. The licence expires in 2077 or when ended.

If an instruction from the Water Administration Ministerial Corporation to SHL causes spills or a Jindabyne Dam release causes downstream damage, the State will compensate SHL for the proportion of claims it incurs. NSW will pay 58 per cent of the cost if the Commonwealth and Victoria also agreed with the instruction. No claims currently exist. The risk of exposure should be very low for several years after corporatisation while sufficient water savings are found and allocated to the Snowy River. This indemnity lasts while the licence is in place.

SHL currently have the following ongoing matters:

- Two unresolved claims lodged with the Dust Diseases Tribunal.
- Bank guarantees in relation to operating within the national electricity market and rental for properties in Sydney and Melbourne to the value of \$20 million.

- To enable major projects to be undertaken the State has guaranteed the performance of the obligations of various statutory authorities under contracts with private sector parties. The current guarantees outstanding are for the following projects:
  - Bonnyrigg Communities Public Housing
  - Eastern Creek Alternative Waste Treatment Plant
  - Illawarra and Woronora Water Treatment Plants
  - Long Bay Prison and Forensic Hospital
  - Macarthur Water Filtration Plant
  - Mater Hospital
  - Olympic Stadium
  - Olympic Multi-Use Arena
  - Orange Hospital Redevelopment
  - Prospect Water Filtration Plant and Treatment Works
  - Royal North Shore Hospital Redevelopment
  - Suburban Rolling Stock
  - VISY Mill: Tumut Timber Supply Agreement.

These guarantees are considered unlikely to ever be exercised.

- The Roads and Traffic Authority (RTA) has certain obligations under contracts with private sector parties with the performance of these obligations guaranteed by the State. The current guarantees outstanding are for the:
  - Cross City Tunnel
  - Eastern Distributor
  - Lane Cove Tunnel
  - M2 Motorway
  - Sydney Harbour Tunnel, and
  - Western Sydney Orbital.

There is no reason to believe that these guarantees are ever to be exercised.

Note 34 Financial Instruments includes information on the estimated value of financial guarantees. This
information is disclosed as a footnote to the table of maturity analysis and interest rate exposure of
financial liabilities.

#### **Total State Sector**

NSW Treasury Corporation has issued unconditional payment undertakings on behalf of some government authorities in the national wholesale electricity market to pay to the system administrator, the Australian Energy Market Operator (AEMO), on demand in writing any amount up to an aggregate maximum agreed with individual participants.

At the reporting date, the amounts of these undertakings were as follows:

Market Participants:	2011 \$ million	2010 \$ million
National Electricity Market (NEM)	46	739
Short Term Trading Market (STTM)	8	13
	54	752

- NSW Treasury Corporation has undertakings for other government authorities for their performance under contracts with third parties. These amounts are recoverable from the State authority participants. At the reporting date they were valued at \$121 million (2010: \$87 million).
- RailCorp has certain obligations under the contract for its Rollingstock Public Private Partnership.
   The State guarantees the performance of those obligations.
- Ausgrid also provides guarantees to regulatory and statutory authorities to the value of \$59 million (2010 \$286 million).
- The State of NSW has provided a Deed of Indemnity to the directors and designated senior management of some State-owned Corporations (SOC). This deed indemnifies them against claims and liabilities in connection with the Energy Industry Reform transactions (Transaction Process).

The SOC covered in this indemnity are:

- Essential Energy
- Eraring Energy
- Ausgrid
- Macquarie Generation
- Endeavour Energy
- Delta Electricity

To the extent permitted by law, the indemnity covers each indemnified party, in their capacity as directors or senior management, against:

- civil liability arising in respect of the Transaction Process if such liability is or was not due to conduct which involve a lack of good faith on the part of the indemnified party, and
- costs in defending proceedings, whether civil or criminal, in which judgement is or was given in favour of the indemnified party or in which the indemnified party is or was acquitted or where the proceedings are discontinued or in connection with any application in relation to a proceeding in which a court grants or granted relief to the indemnified party.

The indemnified parties have a duty to maintain in force comprehensive directors' and officers' insurance policy which cover all of the risks indemnified by the State under the indemnities until:

- the completion of the Transaction Process, and
- for seven year following the completion of the Transaction Process for any acts or omissions of the Indemnified Party occurring before completion of the Transaction Process

The indemnity does not apply in respect of a liability which arises out of any act or omission on the part of the Indemnified Party that involves, among others as detailed in the Deed of Indemnity, gross negligence, recklessness and conduct contrary to any written direction or instructions to the Indemnified Party made by or on behalf of the State.

It is not possible to estimate the amount of contingent liability exposure at this time. There are no known claims as at the reporting date.

The State of NSW has provided a Deed of Indemnity to the director of Cobbora Holding Company Pty Limited against claims and liabilities in connection with the Government's Cobbora coal mine development project. The indemnity given has the same terms and qualifications as the one provided to the directors involved in the NSW Energy Industry Reform project (refer to above).

It is not possible to estimate the amount of the contingent liability exposure at this time. There are no known claims as at the reporting date

#### **Contingent Assets**

#### **General Government**

Unless otherwise stated, the General Government contingent assets are also applicable to the Total State Sector.

Contingent assets exist in respect of guarantees received and from pending litigation. These include:

- As a result of the collapse of HIH Insurance Limited the State assumed liabilities of approximately \$650 million. This was in respect of building warranty and third party motor insurance. An independent actuary estimated the discounted present value of the outstanding liability to be \$208 million as at 30 June 2011 (2010 \$195 million). The liquidators of HIH Insurance Limited currently intend to distribute various percentages up to "more than 50 per cent" depending upon the scheme company. In 2010-11, the State received payments totalling \$59 million (2010 \$80 million).
- The State holds guarantees of \$47 million (2010 \$32 million) as security for contractual performance for bus and freight transport infrastructure contracts.
- The State has negotiated a Heads of Agreement with the Commonwealth which provides up to \$320 million of Commonwealth/State funding on a 50/50 basis for the Asbestos Injuries Compensation Fund. James Hardie Industries NV retains full responsibility for repaying any funding provided.
- The State holds a corresponding guarantee in respect of the State's outstanding guarantee for the Eastern Creek Alternative Waste Treatment Plant.

#### **Total State Sector**

- The State has initiated legal proceedings to recover damages of \$17 million associated with an electricity contractor. At this stage it is not possible to form an opinion on the likely outcome of the proceedings.
- The State holds various performance bonds totalling \$112 million (2010 \$103 million) relating to contracts for country rail and public transport ticketing.
- The Public Transport and Ticketing Corporation (PTTC) has lodged a claim against the former Tcard contractor for non performance under the contract. If this claim is successful the PTTC may be awarded damages against the contractor as well as reimbursement of legal costs relating to the dispute. It is not practical to estimate the potential effect of this cross-claim at this stage of the litigation.
- The State is currently seeking a private tax ruling on the deductibility of capacity charges that retail electricity operators pay electricity generators under the Generation Trading Agreements. A positive ruling will result in an increase in the value of the finance lease receivables.

## Note 33: Events after the Reporting Period

#### **Total State Sector**

On 10 July 2011, the Australian Government announced the Clean Energy Future scheme, which, if legislated, will effectively put a price on carbon emissions. A carbon pricing scheme may have a significant impact on the valuation and estimated useful lives of State assets, and the profitability of State businesses. Current modelling indicates that if a carbon pricing mechanism is introduced the carrying value of the State's power generation infrastructure could reduce significantly. Generator profitability and dividends, are also modelled to fall significantly.

The introduction of a carbon pricing scheme will also result in possible increases in the asset value of State owned carbon sinks such as Forests NSW.

At the date of this report, the State can not reliably measure the potential impact arising from the Clean Energy Future Scheme.

- On 6 September 2011, the State Government announced plans to refinance the Port Botany facility and the Sydney Desalinisation Plant under a long term leasing arrangement. The State Government anticipates the completion of the Water Desalination Plant transaction by mid-2012, and the Port Botany facility transaction in the first half of 2013.
- On 1 July 2011, State exercised an option, in accordance with a Deed of Lease, to lease a section of rail track from Gap to Boggabilla. The effect of the lease will result in a write-down in the 2011-12 financial year of rail infrastructure assets by \$325 million and repayment of public non financial corporation sector borrowings of \$57 million, funded by revenue received of \$57 million for the transaction.

#### Note 34: Financial Instruments

The principal financial instruments of the New South Wales public sector (hereafter referred to as the 'State') are outlined below. These financial instruments arise directly from the State's operations or are required to finance the State's operations. The State does not enter into or trade financial instruments, including derivative financial instruments, for speculative purposes.

The State's main risks arising from financial instruments are outlined below, together with the State's objectives, policies and processes for measuring and managing risk. Further quantitative and qualitative disclosures are included throughout these financial statements.

The NSW Treasury, acting for the Treasurer, has overall responsibility for the establishment and oversight of risk management guidelines for the New South Wales public sector. This includes establishing Treasury Management policy to strengthen the framework for managing risks associated with public sector agencies' treasury functions, including borrowings, investments, derivatives, debt and investment management.

As part of this framework, NSW Treasury administers the *Public Authorities (Financial Arrangements) Act 1987* which is the sole source of legal power for government authorities to enter into financial arrangements. Under this Act, the Treasurer is given responsibility of exercising a central supervisory role in respect of the investment and liability management activities of authorities to ensure that the NSW Public Sector's financial risks and exposures are properly and prudently managed.

This role is effected through the requirement to have the borrowing, investment and joint venture / joint private- public sector financing activities of each authority approved by the Treasurer or Governor.

NSW Treasury Corporation (TCorp) is the State's central borrowing and investing authority. TCorp holds a level of investments for liquidity management purposes, and, as the State's central investing authority it administers the management of the majority of the State's investments. TCorp, acting as the State's central borrowing authority, issues bonds to the public. Bondholders include local and overseas individuals and financial institutions.

The State also holds a small component of investments and borrowings which have not been made through TCorp, but were made directly by individual State agencies, under the authority of the *Public Authorities* (Financial Arrangements) Act 1987.

Management of individual public sector agencies review and agree policies for managing their organisation's risks. Risk management policies are established to identify and analyse the risks faced by the State, to set risk limits and controls and to monitor risks. Compliance with policies is reviewed by public sector agency audit and risk committees, and/or internal auditors on a regular basis. NSW Treasury monitors agency risks from a financial perspective.

This note commences with a summary of the major financial instruments, their classification and carrying amounts.

It is followed by information on the valuation of financial instruments.

The note then reports on the main risks as they affect the State's financial instruments classified into:

- Credit Risk, which affects financial assets
- Liquidity Risk, which affects financial liabilities, and
- Market Risk, which affects financial assets and liabilities because of changes in market prices.

A reference to 'financial instruments' in this note excludes prepayments and statutory receivables/payables as accounting standard AASB 7 excludes them from the definition of financial instruments.

The State's financial instruments are classified as follows:

#### **Financial Instrument Categories**

	General				
		Governn	nent Sector	Total St	ate Sector
		2011	2010	2011	2010
		\$m	\$m	\$m	\$m

Financial assets at fair value					
At fair value through profit and loss - classified					
as held for trading	8	19		499	322
Designated and effective hedging					
instruments	8			141	258
Designated at fair value through profit and	8	7 220	6.630	17.605	10 277
loss Finance leases receivable	8	7,330	6,620	17,685	19,277
		228	204	1,662	352
Equity Investments in Other Public Sector Entities	10	84,232	78,912		•••
Financial Liabilities					
Payables (b) Financial liabilities measured at amortised cost	18,19	5,216	3,621	8,420	6,498
Advances Financial liabilities measured at amortised cost	22	770	811	770	805
Borrowings (c) Financial liabilities measured at amortised cost	21	22,509	19,053	2,721	2,411
Financial liabilities measured at fair value	20	20	18	58,361	56,283
Derivatives At fair value through profit and loss - classified					
as held for trading	20	1	2	446	264
Designated and effective hedging instruments	20			464	319

<sup>(</sup>a) Excludes statutory receivables and prepayments (i.e. not within the scope of AASB 7).

<sup>(</sup>b) Excludes statutory payables and deferred revenue (i.e. not within the scope of AASB 7). Fringe benefits tax and Goods and Services tax payables comprise the difference between the payables and deposits held in the above table and the amounts reported in the statement of financial position.

<sup>(</sup>c) Borrowings comprise bank overdraft, loans from the Commonwealth, other domestic and foreign borrowings and finance leases.

#### Valuation of Financial Instruments

Financial assets are generally recognised at fair value, with the exception of receivables, which are measured at cost. The value of the Hour-Glass Investments is based on the State's share of the value of the underlying assets of the facility, based on the market value. All of the Hour-Glass facilities are valued using 'redemption' pricing. General Government financial liabilities are generally recognised at amortised cost with the exception of derivatives, which are reported at fair value. Total State Sector financial liabilities, which mainly comprise marketable securities, are generally reported at fair value.

Except where specified below, the amortised cost of financial instruments recognised in the statement of financial position approximates the fair value, because of the short-term nature of many of the financial instruments.

Further information on the recognition and measurement of financial instruments by category is reported in Note 1 'Statement of Significant Accounting Policies'.

The State uses the following hierarchy for disclosing the fair value of financial instruments by valuation technique:

- Level 1 Derived from quoted prices in active markets for identical assets / liabilities
- Level 2 Derived from inputs other than quoted prices that are observable directly or indirectly
- Level 3 Derived from valuation techniques that include inputs for the asset / liability not based on observable market data (unobservable inputs)

There were no transfers between levels within the fair value hierarchy during the year.

The table below sets out the State's financial assets and liabilities measured at fair value according to the fair value hierarchy at reporting date.

Fair Value Hierarchy of Financial Assets and Liabilities		Ger	neral					
	Government Sector			Total State Sector				
	Level 1 Level 2 Level 3 Total 2011			Level 1	Level 2	Level 3	Total 2011

Financial instruments classified at level 3 in the hierarchy include Power Reverse Dual Currency Bonds (PRDC's Callable Notes) and Cross Currency Swaps. PRDC's are structured callable notes denominated in Japanese Yen and issued into the Japanese market. The cashflows on each bond are hedged by entering into a structured cross currency swap, callable on the same basis as the corresponding bond.

The State forecasts the cashflows on each bond and swap using the original contractual terms, and where known, the Yen cashflows. The fair value of each bond and swap is calculated as the present value of the Australian dollar cashflows using the original issue margin. The State is of the opinion that no secondary market exists for PRDC's and there are no reasonably possible alternative assumptions that would significantly change the fair value.

#### Financial Instruments with Different Carrying Amounts and Fair Value

There are no material differences between the carrying amounts and the fair value of financial instruments. The amortised cost of financial instruments recognised in the statement of financial position approximates fair value due to the short term nature of many of the financial instruments.

#### Credit Risk of Financial Assets

Credit risk arises when there is the possibility of the State's counterparties defaulting on their contractual obligations, resulting in a financial loss to the State. The maximum exposure to credit risk is generally represented by the carrying amount of the financial assets (net of any allowance for impairment).

Credit risk arises from the financial assets of the State, including cash, deposits, receivables, and financial assets.

The State controls the borrowing and investing powers of its authorities through the *Public Authorities* (*Financial Arrangement*) *Act*. The provision for the Treasurer to schedule authorities under this Act restricts the ability and amount that public authorities can borrow and invest, and directs most authorities to finance only through NSW Treasury Corporation (TCorp). TCorp manages credit risk associated with its financial assets through the selection of counterparties, establishment of minimum credit rating standards, and monitoring of credit utilisation against limits. Agencies with approved investing powers outside of TCorp are restricted to invest in classes of instruments (with varied credit ratings) as scheduled under the *Public Authorities* (*Financial Arrangement*) *Act*.

The State holds various security deposits in the General Government Sector to the value of \$1,378 million (\$76 million in 2010) and Total State Sector to the value of \$1,858 million (\$206 million in 2010). At 30 June 2011, \$1,286 million is included in security deposits for Eraring Energy and Delta Electricity entering into respective Generation Trading Agreements with Origin and TRUenergy, to sell the trading rights of Eraring, Shoalhaven, Mount Piper and Wallerawang power stations. This deposit is interest bearing.

The State obtains other collateral in relation to securities sold under repurchase agreements and may obtain collateral in relation to securities loaned under its stock lending facility if required by the TCorp Board policy. The terms and conditions of the repurchase agreements are governed by standard industry agreements, reflecting current Australian market practice. In the event of default, the State is immediately entitled to offset the cash collateral against the amounts owed by the defaulting counterparty. Cash collateral received for repurchase agreements outstanding at the reporting date totalled \$1,183 million (2010: \$1,455 million).

#### Financial Assets at Fair Value

Financial assets at fair value include fiduciary activities administered by TCorp including Hour-Glass facilities, managed asset portfolios, securities and placements and other investments held directly by public sector agencies.

The investments within the Hour-Glass facilities are unit holdings in a managed investment pool, and as such, do not give rise to direct credit risk. The carrying amount is not reported within the financial assets at fair value in the table of Credit Risk because they generate nil (direct) sensitivity to credit risk. As the Hour-Glass facilities unit price is sensitive to market price risk, they have been included in the sensitivity analysis under the separate section headed 'Price Risk'. Credit risk within the Hour-Glass facilities is managed through TCorp, as trustee contracting with a spread of managers and requiring in their mandates a series of controls over the concentration and credit quality of assets.

#### Managed asset portfolios

NSW Treasury Corporation (TCorp) manages risk exposures applicable to specific fixed-interest investments of the State in accordance with an asset portfolio mandate agreed between the two parties. For this service TCorp receives a fee based on the dollar value of the portfolio, and in some cases a fixed component. The various risks are managed by TCorp within limits stipulated in the portfolio mandate.

#### Securities and Placements

These include bank bills and certificates of deposit, securities sold under repurchase agreements, and government, semi-government and supranational bonds held by TCorp, mainly to cover the liquidity requirements of the State's borrowings.

#### Categorisation of Credit Risk

Fixed-interest holdings are categorised for credit risk by the Standard & Poors (S&P) or Moody's credit rating applicable to the underlying securities. The amount of securities held must not exceed the State's limit for the relevant S&P or Moody's equivalent category. Limits also apply to the amounts that may be held with individual counterparties. To be eligible for investment, counterparties must satisfy minimum credit rating criteria. Monitoring processes ensure that credit rating information is up-to-date and portfolio holdings are maintained within the approved credit limits.

Credit risk applicable to investments is detailed in the tables below.

#### Concentration of Credit Risk

- (a) Amounts are assigned to the credit ratings categories based on information provided by individual agencies who use rankings assigned by Standard and Poors (S & P) or Moody's Investor Services. "AAA", "AA+", "AA", "AA-", "A+", "A", "A", "A+", "A" displayed in the column headings are ratings categories by S & P that are comparable with "Aaa", "Aa1","Aa2", "Aa3", "A1","A2" ratings given by Moody's.
- (b) Short term ratings of A-2 or better, when the counterparty has no long term rating or the long term rating is A or lower. In addition, it includes an amount of \$0.9 billion (2010 \$0.7 billion) comprising various investments that have no specific rating.
- (c) This table excludes \$6,592 million (2010 \$5,654 million) of cash and deposits held in Hour-Glass Facility and other financial institutions with various credit ratings.
- (d) These items are additional credit exposures not reported on the statement of financial position. These disclosures represent the market value convention for the calculation of credit exposure for derivative financial instruments. This convention is to add to the market value an amount of potential exposure as determined by reference to the length of time to maturity and face value.

#### Cash

Cash comprises cash on hand, cash invested in the TCorp Hour-Glass Facility, and cash and deposits held at financial institutions. Interest is earned on daily bank balances at published rates. The TCorp Hour-Glass cash facility is discussed in the section headed 'Price Risk' as it is affected by market price risk. The credit ratings of the 'other financial institutions' holding the non Hour-Glass cash is mainly graded A+ short term and AA long term.

#### Receivables

Debtors exist for the settlement of services that the State provides across the broad spectrum of its public services. In addition, the State has issued low interest or interest free loans for policy purposes, which are known as advances. Advances receivable include amounts provided for assistance to farmers and for certain transport infrastructure.

Each State agency is responsible for the management and collection of its debtors.

All debtors are recognised as amounts receivable at reporting date. Sales are made on terms appropriate to the sector providing the public service. Collectability of debtors is reviewed on an ongoing basis. Established procedures are followed to recover outstanding amounts, including letters of demand. Debts which are known to be uncollectible are written off. An allowance for impairment is raised when there is objective evidence that the State will not be able to collect all amounts due. This evidence includes past experience, and current and expected changes in economic conditions and debtor credit ratings.

The annual movement in the allowance for impairment is summarised below.

#### Movement in Allowance for Impairment

	General					
	Governm	ent Sector	Total State Sector			
	2011 2010		2011	2010		
	\$m	\$m	\$m	\$m		
Opening balance at 1 July	96	87	170	156		
Amounts written off during the year	(52)	(44)	(94)	(112)		
Amounts recovered during the year	(3)	(3)	(25)	(6)		
Increase/(decrease) in allowance recognised in profit or loss	67	56	83	132		
Closing balance at 30 June	108	96	134	170		

The State provides services to a broad spectrum of the New South Wales economy, for example for water, electricity and public housing. Debtors include individual households and commercial businesses with various credit ratings.

The State is not materially exposed to concentrations of credit risk to a single trade debtor or group of debtors in respect of financial instruments. However, footnote (c) of Note 6 to these financial statements discloses information on exposure to a single debtor in respect of statutory receivables, which are not reported within this financial instruments note as AASB 7 excludes them from its definition of financial instruments.

Based on past experience, debtors that are not past due (GGS 2011: \$3.3 billion; 2010: \$4.0 billion; TSS 2011: \$3.8 billion; 2010: \$4.1 billion) represent GGS 90.1%; TSS 85.1% (GGS 2010: 94.3%; TSS 2010: 86.8%) of the total debtors. On the basis of materiality, information has not been collated for the State on the quantum of debtors which are currently not past due or impaired whose terms have been renegotiated.

The overwhelming majority of amounts past due or impaired relate to the sale of goods and services. Therefore, the following analysis has been prepared for all receivables past due or impaired, and has not been dissected by component receivable.

#### Financial Instruments Past due or Impaired

	Gene				
	Governme	nt Sector	Total State Sector		
	\$m \$m		\$m	\$m	
	Past due but not impaired \$m			Considered impaired \$m	
June 2011					
Less than three months overdue	150	38	339	48	
Between three months and six months overdue	53	16	104	27	
Greater than six months overdue	54	50	80	76	
June 2010					
Less than three months overdue	88	24	291	53	
Between three months and six months overdue	20	18	75	45	
Greater than six months overdue	46	44	76	87	

Each column in the table reports 'gross receivables'. The receivables considered impaired can comprise of amounts that are fully or partially impaired.

The ageing analysis excludes statutory receivables, as these are not within the scope of AASB 7 and excludes receivables that are not past due and not impaired. Therefore, the total will not reconcile to the amount in the receivables note.

#### **Liquidity Risk of Liabilities**

Liquidity risk is the risk that the State will be unable to meet its payment obligations when they fall due. The State, through its agencies, continuously manages risk through monitoring future cash flows and maturities planning to ensure adequate holding of high quality liquid assets. The objective is to maintain a balance between continuity of funding and flexibility through the use of overdrafts, borrowings and other advances.

During the current and prior years, there were no defaults or breaches on borrowings payable. Footnote (b) in the following table lists the State's major financial guarantees. In addition, note 32 to these financial statements outline contingent liabilities in respect of guarantees made to facilitate the provision of certain services, the construction of several infrastructure assets, and guarantees associated with the previous disposal of certain assets. The State's exposure to liquidity risk is deemed insignificant based on prior periods' data and current assessment of risk.

Liabilities are recognised for amounts due to be paid in the future for goods or services received, whether or not invoiced. Trade terms vary, depending upon the service performed and the agreement made with the debtor.

Certain benchmark bonds issued by the State, included in Borrowings (note 20) are guaranteed by the Commonwealth of Australia pursuant to the Australian Government Guarantee of State and Territory Borrowing Scheme dated 24 July 2009 (the 'Scheme'). On 7 February 2010, the Commonwealth announced that the 'Final Issuance Date' under the Scheme will be 31 December 2010. All Commonwealth Guaranteed benchmark bonds issued by the State in existence as at the Final Issuance Date will remain guaranteed by the Commonwealth, in accordance with the terms of the Scheme.

AASB 7 Financial Instrument: Disclosures requires presentation of exposures prepared using contractual undiscounted cash flows. This comprises loan commitments which include both borrowings at face value and future interest commitments. The table below summarises the maturity profile of the State's financial liabilities, together with the interest rate exposure.

#### Maturity Analysis and Interest Rate Exposure of Financial Liabilities (a)

#### **General Government Sector**

	Notes	Floating	Fixed intere	Non-			
		interest	1 year or	1 to 5	Over 5	interest	Nominal

Payables	18,19		•••			5,216	5,216
Advances	22		60	210	985		1,255
Bank overdraft	21						
Domestic and foreign							
borrowings	20,21		1,818	10,976	19,501		32,295
Finance leases	21		347	1,384	3,609		5,340
Derivative Liabilities	20						
Financial Guarantees (b)	20					5,370	5,370
Total Financial Liabilities			2,225	12,570	24,095	10,586	49,476

- (a) The amounts disclosed are the contractual undiscounted cash flows of each class of financial liabilities and therefore, will not reconcile to the statement of financial position which is based on fair value or amortised cost. The balances presented here include gross finance lease obligations, contractual amounts to be exchanged in a derivative financial instrument for which gross cash flows are exchanged, and gross loan commitments, i.e. borrowings at face value plus future interest commitments. For information on financial guarantees refer to the above narrative on liquidity risk and Note 32 Contingent Liabilities.
- (b) The State has a number of financial guarantees outstanding at 30 June 2011 with an estimated total value of \$16 million (2010: \$18 million) recognised in the Statement of Financial Position. The value disclosed above differs from the Statement of Financial Position mainly due to guarantees being measured above on a worst case scenario in line with revised disclosure requirements in AASB 7. The estimated value was calculated by an independent valuer based on the remote possibility of any of these guarantees ever being exercised. These guarantees are as follows:

**Structured Finance Activities**: The State has guaranteed certain payment and performance obligations under cross border leases. The State has a third-party risk for money on deposit with a counterparty. TCorp regularly monitors the risk on behalf of the State. The counterparties have credit standings of from AA+ to AAA. The credit risk for these activities is \$7 million (2010: \$17 million).

**AEMO Guarantees**: The State provides a guarantee over electricity related settlement payments made by electricity agencies to the Australian Energy Market Operator (AEMO) and power generators. Settlement payments are normally four weeks in arrears. The stability and financial integrity of the national electricity market is underpinned by the regulatory framework set out in the National Electricity Code and supported by established risk management procedures administered by AEMO including strategies for the management of credit risk. The credit risk for these activities is \$175 million (2010: \$839 million).

**GIO Guarantees:** The State provided a guarantee over GIO obligations for insurance policies entered into before its sale in 1992. The State's guarantee can only be called upon if the existing owners are unable to make payment. This is regarded as extremely unlikely. The credit risk for these guarantees is \$236 million (2010: \$271 million).

**Public Private Partnership Guarantees:** The State has guaranteed that five agencies involved in public private partnerships will meet their obligations to pay for finance leases and services provided. These are long term agreements involving significant sums. It is very unlikely that the agencies would cease to pay the finance lease contracts on assets or meet payments for services they require for their operations. The credit risk for these activities is \$4,952 million (2010: \$5,119 million).

These balances include estimated interest payments and exclude the impact of offsetting arrangements.
- (c) Refer to Note (b) in the 2011 General Government table on the previous page for information on financial guarantees.

#### **Market Risk**

Market risk is the risk that the fair value or future cash flows of a financial instrument will fluctuate because of changes in market prices. The State's exposures to market risk are primarily through

- interest rate risk on the State's borrowings and investments,
- price risks associated with the movement in the unit price of the Hour-Glass Investment Facilities,
- electricity and other price risks that affect specific revenue and expenses, and
- foreign exchange risk that could affect borrowings and the value of overseas purchases.

For interest rate risk and Hour-Glass price risk the effect on operating result and equity due to a reasonably possible change in risk variable is outlined in the information below. A reasonably possible change in risk variable has been determined after taking into account the economic environment in which the State operates and the time frame for the assessment (i.e. until the end of the next annual reporting period). The sensitivity analysis is based on risk exposures in existence at the reporting date. The analysis is performed on the same basis for 2010. The analysis assumes that all other variables remain constant.

#### **Interest Rate Risk**

Exposure to interest rate risk arises primarily through the State's interest bearing assets and liabilities. This risk is minimised by undertaking mainly fixed rate borrowings and entering fixed interest deposits, primarily through NSW Treasury Corporation (TCorp).

TCorp manages the debt portfolio of the Crown, the Roads and Traffic Authority and a majority of the State's commercial entities. A small number of other commercial entities engage private sector financial institutions to manage or advise on the management of their debt portfolios, or manage their own portfolios.

The Treasury's Debt Management Policy requires that entities with significant debt portfolios manage the portfolio against a benchmark portfolio. This benchmark portfolio reflects the risk and return preferences of the individual entities. The debt manager must ensure that the average maturity of the actual debt portfolio is within an agreed range of the benchmark portfolio. In order to achieve this, TCorp uses derivatives, primarily interest rate futures, to manage the duration and maturity profile of the managed asset portfolio within specified tolerance limits.

The State's exposure to interest rate risk is set out in the table below. The Interest Rate Risk Table reports the estimated sensitivity of a one per cent movement in interest rates to the operating result of the State. The value of the State's 'available-for-sale' investments that are adjusted through 'other economic flows – other comprehensive income', is negligible.

Therefore, for the financial instruments in the table, a change in interest rates would affect the operating result, and not be adjusted through 'other economic flows – other comprehensive income'.

A reasonably possible change of  $\pm$ 1% is used, consistent with current trends in interest rates. The basis will be reviewed annually and amended where there is a structural change in the level of interest rate volatility.

TCorp's borrowing and investment activities are disclosed in the following tables of Interest Rate Risk – Sensitivity Analysis. However, instead of applying the plus (or minus) one percent sensitivity, a Value at Risk (VaR) model is used to measure the market risk exposures of the TCorp borrowings and investments in the statement of financial position. VaR is calculated daily and represents an estimate of the loss that can be expected over a 10-day period, with a one percent probability that this amount may be exceeded. Given TCorp's balance sheet positions at 30 June 2011, the maximum potential loss expected over a 10-day period is \$8 million (2010: \$19 million), with a 1 per cent probability that this maximum may be exceeded. The average VaR over the year ended 30 June 2011 was \$11 million (2010: \$16 million).

The Hour-Glass Cash and Investment facilities are managed funds, and are affected by market price risk and not by interest risk. A separate sensitivity analysis is provided in the 'Price Risk' disclosures of this note.

### Interest Rate Risk - Sensitivity Analysis

Borrowings - other <sup>(e)</sup>	2,158				
Derivative Liabilities	2				

- (a) A decrease (increase) of one percentage point in interest rates on variable financial instruments at reporting date would have increased (decreased) the operating result by the amounts shown. This analysis assumes that fixed rate instruments held at 30 June will be reinvested upon maturity in fixed (and not floating) rate instruments, and all other variables remain constant. Where the carrying amount is impacted, this amount is multiplied by +/- 1%.
- (b) Financial instruments are not considered available for sale or held for sale items as they are not held for speculative purposes. Financial assets at fair value are classified as held for trading, or, designated and effective hedging instruments. Financial liabilities measured at amortised cost are classified as held for trading, or, designated and effective hedging instruments. Therefore, the potential impact of interest rate fluctuations for these financial instruments will be taken directly to the operating result and not through 'other economic flows other comprehensive income'.
- (c) Excludes interest rate sensitivity of the cash and cash equivalents that are held in the TCorp Hour-Glass portfolio. The cash and cash equivalents of the Hour-Glass portfolio are subject to the overall risks of that facility and are reported in a separate table.
- (d) These balances comprise short term securities and placements held with TCorp at fixed interest rates and Hour-Glass investments managed by TCorp. The risks associated with the Hour-Glass are reported separately under the 'Price Risk' section of this note.
- (e) These balances represent items that are subject to floating or fixed interest rates that are not held with TCorp. Where the underlying financial instrument has a fixed interest rate, it is considered that there will be no impact from interest rate changes until such time as the instrument matures and the terms and conditions of its lodgement are renegotiated. Therefore, for these financial instruments, a change in interest rate would not affect the operating result, or 'other economic flows other comprehensive income'. reported at 30 June.
- (f) Borrowings issued by TCorp include variable and fixed rate instruments. The overall risks associated with these TCorp administered holdings of financial liabilities are disclosed in the narrative on 'Market Risk'.

- (a) A decrease (increase) of one percentage point in interest rates on variable financial instruments at reporting date would have increased (decreased) the operating result by the amounts shown. This analysis assumes that fixed rate instruments held at 30 June will be reinvested upon maturity in fixed (and not floating) rate instruments, and all other variables remain constant. Where the carrying amount is impacted, this amount is multiplied by +/- 1%.
- (b) Financial instruments are not considered available for sale or held for sale items as they are not held for speculative purposes. Financial assets at fair value are classified as held for trading, or, designated and effective hedging instruments. Financial liabilities measured at amortised cost are classified as held for trading, or, designated and effective hedging instruments. Therefore, the potential impact of interest rate fluctuations for these financial instruments will be taken directly to the operating result and not through 'other economic flows other comprehensive income'.
- (c) Excludes interest rate sensitivity of the cash and cash equivalents that are held in the TCorp Hour-Glass portfolio. The cash and cash equivalents of the Hour-Glass portfolio are subject to the overall risks of that facility and are reported in a separate table.
- (d) These balances comprise short term securities and placements held with TCorp at fixed interest rates and Hour-Glass investments managed by TCorp. The risks associated with the Hour-Glass are reported separately under the 'Price Risk' section of this note
- (e) These balances represent items that are subject to floating or fixed interest rates that are not held with TCorp. Where the underlying financial instrument has a fixed interest rate, it is considered that there will be no impact from interest rate changes until such time as the instrument matures and the terms and conditions of its lodgement are renegotiated. Therefore, for these financial instruments, a change in interest rate would not affect the operating result, or 'other economic flows other comprehensive income' reported at 30 June.
- (f) Borrowings issued by TCorp include variable and fixed rate instruments. The overall risks associated with these TCorp administered holdings of financial liabilities are disclosed in the narrative on 'Market Risk'.
- (g) Derivative liabilities are considered non-interest bearing due to their nature. Therefore, changes in interest rates at reporting date would not affect profit or loss.

The above tables have been prepared using the assumption that only floating rate instruments directly affect the operating result, due to a change in interest rate.

The tables show that interest rate risk at 30 June 2011 would not significantly and directly affect the operating result in an immediate sense, as the majority of financial instruments were at a fixed interest rate. However, interest rate changes could affect operating results to a greater extent as time progresses, and existing fixed rate instruments also mature or are rolled over into replacement instruments (fixed or floating rate), which can be affected by future changes to interest rates.

#### **Price Risk**

The State's main exposures to price risk result from changes in market prices of its Hour-Glass managed fund facilities, and through changes in the spot price for electricity purchases and sales, within the National Electricity Market.

The State has no significant direct equity marketable investments. So, aside from Hour-Glass managed funds, there are no other significant financial instruments that are affected by changes in share prices. However, refer to note 24 *Superannuation Provisions* for information on superannuation liabilities which can be affected by changes in share and other prices, but do not meet the definition of 'financial instruments' for the purposes of this Note, and so are excluded from the following analysis.

### NSW Treasury Corporation (TCorp) Hour-Glass Facilities

The State holds units in the following Hour-Glass investment trusts, which are held for strategic rather than trading purposes. The facilities comprise a series of managed funds which are subject to volatility in their unit prices.

Each facility comprises a different underlying type of investment, with associated risks and investment horizons.

#### **Hour-Glass Facilities**

				eneral ent Sector	Total Sta	ate Sector
Facility	Investment Sectors	Investment Horizon	2011	2010	2011	2010
Facility	Investment Sectors		\$m	\$m	\$m	\$m
Cash	Cash, money market instruments	Up to 1.5 years	1,421	1,059	3,238	2,559
Strategic cash	Cash, money market instruments	1.5 years to 3 years	193	173	193	173
Medium Term growth	Cash, money market instruments Australian and International bonds, listed property, Australian shares	,	219	359	219	359
Long Term growth	Cash, money market instruments Australian and international bonds, listed property, Australian shares	•	1,289	897	1,842	897
Treasury Managed Fund (Hour Glass fac ility)	Cash, money market instruments Australian bonds, listed and unlisted property, Australian, international and emerging market shares	, Long Term	4,931	4,615	4,931	4,615
The State's Hour Gl	ass Facilities		8,053	7,103	10,423	8,603

The unit price of each facility is equal to the total fair value of the net assets held by the facility divided by the number of units on issue for that facility. Unit prices are calculated and published daily.

TCorp is trustee for each of the above facilities and is required to act in the best interest of the unitholders and to administer the trusts in accordance with the trust deeds. As trustee, TCorp has appointed external managers to manage the performance and risks of each facility in accordance with a mandate agreed by the parties. However, TCorp acts as manager for part of the Cash Facility and for the Strategic Cash Facility. A significant portion of the administration of the facilities is outsourced to an external custodian.

Investment in the Hour-Glass facilities limits the State's exposure to risk, as it allows diversification across a pool of funds with different investment horizons and a mix of investments.

The following table provides sensitivity analysis information for each of the Hour-Glass facilities, using historically based volatility information collected over a ten year period, quoted at two standard deviations (i.e. 95% probability). The TCorp Hour-Glass Investment facilities are designated at fair value through profit or loss and therefore any change in unit price impacts directly on the operating result (rather than 'other economic flows – other comprehensive income'.)

A reasonably possible change is based on the percentage change in unit price (as advised by TCorp) multiplied by the redemption value at 30 June each year for each facility.

### Price Risk Sensitivity Analysis of the Hour-Glass Investment Facilities

		General					
	Change in Unit	Change in Unit	Governme	ent Sector	Total Sta	ate Sector	
Facility	Pric e	Pric e	2011	2010	2011	2010	
	2011	2010	\$m	\$m	\$m	\$m	
Cash	+/ -1.0%	+/ -1.0%	14	11	32	26	
Strategic Cash	+/ -1.0%	+/ -1.0%	2	2	2	2	
Me dium Term Growth	+/ -6.0%	+/ -7.0%	13	25	13	25	
Long Term Growth	+/ -15.0%	+/ -15.0%	193	135	276	135	
Treasury Managed Fund Facility	+/ -21.1%	+/ -22.2%	1,040	1,024	1,040	1,024	

The table above shows that the State's dollar exposure to Hour-Glass unit price risk can be significant, particularly for its holdings in the Long-Term and Treasury Managed Fund Facilities. Both of these facilities are underpinned by heavier weightings in share and property growth assets. It should be expected that while there can short term volatility in annual returns, they will return higher long term returns than the Cash or Strategic Cash facilities. In particular, the Treasury Managed Fund investments are held beyond the short term to reflect the payment horizon for insurance claims, which can extend beyond a few years.

#### **Electricity Price Risk**

The State is exposed to electricity price and revenue risk through purchases and sales within the National Electricity Market (NEM). State owned generators sell electricity through the NEM to meet customer load requirements. Price risk arises from the sale of electricity at variable pool prices through the NEM. It is the responsibility of management, in accordance with board approved mandates to use a combination of risk management tools such as swaps, options and futures contracts transacted with market participants and energy trading operators to hedge the customer load and control exposure to NEM pool prices.

Trading is performed under board approved mandates which permit active portfolio management within regularly monitored risk limits. The limits consider measurements of 'cashflow at risk' and 'earnings at risk', accompanied by volumetrics position analysis. As the energy sales are managed on a daily basis under board approved mandates by management, and each participant operates on its own forward price curve estimate, information has not been collated to enable an estimate of the overall impact of price volatility on the net position of the State. However, information will be published on the impact of price volatility as it affects each of the State's generators in notes to their individual financial statements.

### Foreign Exchange Risk

The State, through its consolidated entities, has policies and procedures in place and utilises foreign exchange derivatives to ensure that it has no material exposure to changes in foreign exchange rates.

### Borrowings

In order to achieve the most cost effective funding of the State's debt, TCorp conducts a number of debt issues in foreign currencies in foreign capital markets.

Foreign exchange risk, arising from offshore borrowings undertaken in foreign currencies to fund Australian dollar assets, is covered by entering into Australian dollar cross-currency swaps and forward foreign exchange contracts.

Forward foreign exchange contracts with clients are covered by corresponding forward exchange contracts with market counterparties. In the majority of these arrangements the clients indemnify TCorp for any credit exposure arising from the corresponding transaction with the market counterparty.

### Managed asset portfolios

During the year some investments in the managed fixed asset facility may be denominated in currencies other than Australian Dollars. TCorp is required to effectively hedge that currency exposure as and when it arises. It fully hedges all foreign currency exposure for international fixed interest and listed property unit trust investments and foreign currency denominated bond investments. As at 30 June 2011, the State had no transactional or structural currency exposures associated with these portfolios (2010 \$nil).

#### Other Purchase and Sale Commitments

In addition, a number of entities in the NSW Public Sector enter into forward foreign exchange contracts to hedge certain purchase and sale commitments entered into in the normal course of business. These contracts cover the purchase of capital equipment and supplies for state electricity and transport authorities and arts agencies.

The following table list the value of these forward foreign exchange contracts as denominated in their foreign currency.

### Purchase and Sale Commitment Contracts Denominated in their Foreign Currency

	Gene	ral			
	Government Sector		Total Sta	tate Sector	
	2011	2010	2011	2010	
	In Foreign	In Foreign	In Foreign	In Foreign	
	Currency	Currency	Currency	Currency	
Buy Currency	Millions	Millions	Millions	Millions	
Euro			62	44	
Japanese Yen	···		2,154	2,789	
Korean Won			3,805	21,849	
Swedish Krona			9	20	
Swiss Franc				2	
United Kingdom Pound			1		
United States Dollar			57	99	

The foreign currency risk is not considered material in terms of a possible impact on the operating result and total equity and, as such, a sensitivity analysis has not been completed. The total exposure in Australian dollars is estimated at \$173 million (2010 \$239 million).

### Note 35: Discontinuing Operations

In 2010-11 the State sold its retail electricity operations and WSN Environmental Solutions. In 2009-10 the State sold NSW Lotteries Corporation.

### Summary of Discontinuing Operations as Reported in the Statement of Comprehensive Income

Details of the specific discontinuing operations follow.

### **Retail Electricity Operations**

On 14 December 2010, the State entered into sale transactions for the retail businesses of Country Energy, Energy Australia and Integral Energy (public non-financial corporations). 1 March 2011 was the completion date of the sales contract to Origin Energy and TRUenergy.

The retail business activities sold include:

- retail business contracts
- gas inventory
- surplus green rights
- former customer debtors
- retail business intellectual property and materials
- goodwill

Nil cash assets were included in the \$458 million net assets transferred to the purchaser.

The State will retain ownership of the network business comprising the electricity transmission and distribution network (poles and wires) and metering functions through its renamed corporations, Essential Energy, AusGrid, and Endeavour Energy. After the completion date of the sale, these corporations will provide certain retail business services to the purchasers for a fee under the Transition Services Agreements (TSAs) for up to 43 months. This includes providing services such as billing, collections, debtor management, call centres customer services, and business information services.

The Total State Sector accounting gain from the sale transactions was \$3,249 million in 2010-11.

#### A summary of the sale transactions follows:

Retail business	Purchaser	TSA	Proceeds
			\$ million
Country Energy	Origin Energy	43 months	1,300
EnergyAustralia	TRUenergy	36 months	1,480
Integral Energy	Origin Energy	25 months	1,000
Total			3,780*

<sup>\*</sup> Excludes any purchase price adjustments relating to unbilled income and working capital

### **Waste Recycling and Processing Corporation**

In 2010-11, the State sold the public trading enterprise business, Waste Recycling and Processing Corporation trading as WSN Environmental Solutions (WSN) to SembSita Australia Pty Ltd.

The sale took place on 31 January 2011.

A summary of the WSN's transaction follows;

- The purchaser paid the state \$234 million for WSN Environmental Solutions.
- As part of the transaction the state sold WSN Environmental Solutions' assets, rights and liabilities, except for the assets, rights and liabilities vested to Waste Assets Management Corporation.
- The State established the Waste Assets Management Corporation, a public trading enterprise to manage certain assets, rights and liabilities of WSN that were not sold, including the landfill sites at Belrose and Eastern Creek. \$49 million of the sale proceeds were set aside for future landfill remediation.
- The general government sector incurred costs in 2010-11 of \$9 million (2009-10 \$4 million) associated with the sale of WSN. \$13 million of cash assets relating to employee entitlements, were included in the \$245 million of net assets transferred to the purchaser.
- The loss from the sale transaction was \$20 million in 2010-11.

#### **NSW Lotteries Corporation**

In 2009-10, the State granted a 40 year lotteries licence and sold the shares of a public trading enterprise, the NSW Lotteries Corporation, to Tattersall's Holding Pty Ltd. The sale took place on 31 March 2010. In addition various assets and liabilities were transferred from NSW Lotteries to the State as part of the pre-transaction restructuring. The discontinuing operation relates to the Total State Sector only, however the gain associated with the sale is recognised in the general government sector.

A summary of the Lotteries transaction follows:

- The State granted a 40 year licence to the purchaser for \$250 million. The prepaid licence revenue, which does not form part of the discontinuing operations disclosure, is recognised as a deferred income liability in the general government and total state sector statement of financial positions. The liability will be amortised and recognised as revenue across the 40 year licence period.
- The purchaser paid the State \$600 million for the shares of NSW Lotteries Corporation.
- Prior to the sale Ministerial vesting orders, determinations and directions resulted in the NSW Lotteries Corporation returning to the general government sector surplus cash of \$123 million, investments of \$31 million, and a property with a fair value of \$10 million. These assets were partly offset by an assumption of prize fund liabilities in respect of unclaimed prizes whose fair value is estimated at \$6 million. These assets and liabilities, transferred from the former NSW Lotteries Corporation have been eliminated on consolidation of the total state sector.
- The general government sector incurred costs in 2009-10 of \$5 million associated with the overall transaction. In addition, a \$4 million working capital adjustment was reimbursed to the purchaser.
- Note 32(B) *Contingent Liabilities Guarantees*, includes information on a contingent liability for unclaimed lottery prizes outstanding at 29 March 2010.

Details follow of the net result from the NSW Lotteries Corporation discontinuing operations. This disclosure, which affects the total state sector results, is after elimination of lotteries and income taxes paid to the general government sector:

### Note 36: Disaggregated Financial Statements

The Total State Sector comprises a consolidation of three sectors

- General government
- Public non-financial corporations, and
- Public financial corporations.

The broad sectors have been determined in accordance with the Government Finance Statistics Standards of the Australian Bureau of Statistics. A brief definition of each sector is described in Note 1 of these financial statements under the sub-heading 'Scope'.

This note presents statements of

- comprehensive income
- financial position
- cash flows
- and changes in equity

for each sector, including the total state sector.

For the purpose of this disclosure, effects of transactions and balances between sectors have not been eliminated, but those between entities within each sector have been eliminated.

Pursuant to National Competition Policy, the State has implemented a National Tax Equivalents Regime (NTER) for Public Corporations, and some General Government agencies.

Tax effect accounting principles have therefore been adopted by all agencies, which are part of the National Tax Equivalents Regime. On consolidation, all NTER related income tax entries are eliminated for the Total State Sector.

The 2009-10 comparative year columns in the following tables have been restated for any corrections of errors and changes in accounting policies, for consistency with the 2010-11 presentation.

In addition this note also presents information on total expenses and total assets by function for the General Government and Total State Sectors. 'Functions' are broad policy areas, which the ABS refers to as General Purpose Classifications.

<sup>(</sup>a) The aggregate expenses and assets for the general government sector can be greater than the total state sector aggregates due to the elimination of inter sector expenses and asset balances from the total state aggregates.

The aggregate amount of the comprehensive result attributable to the GGS from the PNFC and PFC sector entities in 2010-11 is \$8,837 million net income (2009-10 \$6,962 million net income). It comprises the sum of GGS revenues (dividends, income and other tax revenues, revenues from sale of goods and services, interest from inter-sector loans, and gains on the equity investment in the PNFC/PFC sectors), less the sum of inter-sector GGS inter-sector expenses (grants, interest on borrowings, and purchases).

<sup>(</sup>b) Other Purposes for the general government sector, includes the State's equity investment in the PNFC/PFC sectors which is eliminated in Total State Sector assets.

Note 37: Key Fiscal Aggregates and Reconciliations to Government Finance Statistics

- (a) Grants are recognised when the State gains control over the asset, which is normally upon receipt of cash. In 2006 New South Wales receipted a grant of \$960 million from the Australian Government for the Australian Road Transport Program. The grant was recognised in 2006 for AGAAP purposes. However, the Australian Bureau of Statistics has determined that this specific grant be deferred and spread for GFS purposes, to match the timing of the spending by the states on the specific road program. 2009-10 is the final year that this treatment will occur.
- (b) GFS recognises dividends to owners by the PNFC and PFC sectors as a GFS expense, whereas under AGAAP they are treated as a distribution to owners and therefore a direct reduction of accumulated funds. This difference does not flow through to the total state sector as dividends are eliminated on consolidation.
- (c) GFS does not recognise an allowance for doubtful debts as it is not a mutually agreed transaction, whereas under AGAAP an allowance for doubtful debts is recognised in the statement of financial position and doubtful debts are recognised in the statement of comprehensive income as other economic flows.
- (d) Under GFS, interest free or low interest loans are recognised based on the original amount lent, and interest is recognised based on any cash interest paid. In contrast, under AGAAP, loans are recognised initially at fair value and thereafter at amortised cost. Any difference between the original amount lent and the fair value is initially recognised to the operating result and subsequently amortised over the life of the loan. This results in the value of GFS advances being higher than AGAAP advances.
- (e) AGAAP recognises the prepaid income liability for unamortised prepaid licences in the statement of financial position. This liability is excluded from the GFS balance sheet as the prepaid income is treated as an upfront sale of a non-produced intangible asset for GFS purposes.
- (f) GFS does not recognise provisions for restoration and remediation as there is no present counterparty to the transaction. The provision liabilities (and any related capitalised asset values) are therefore lower under GFS as a result of the exclusion.
- (g) AGAAP adopts tax effect accounting whereby timing differences between accounting profit and tax profit are deferred as future income tax benefit assets or provisions for deferred tax liabilities. GFS does not recognise deferred tax. As the State's PNFCs revalue their infrastructure, this can create large provisions for deferred tax liabilities and result in significant differences between the GFS and the AASB 1049 sector aggregates. This convergence difference also flows through to the GGS, as the GGS is the counterparty to the tax effect accounting entries recognised by the PNFC/PFC entities. However, this difference does not flow through to the total state sector as income tax equivalents are eliminated on consolidation.
- (h) In the absence of a market value for PNFC/PFCs, the value of net assets is applied as a surrogate for the general government's equity investment in other sectors. GFS net assets do not equal AGAAP net assets because GFS balance sheets exclude certain items such as deferred taxes, allowance for doubtful debts and restoration provisions. This results in differences between the GFS and the AGAAP values for the general government's equity investment in other sectors.
- (i) Transactions with owners as owners are excluded for the comprehensive result, however are included in the movement in GFS net worth. These type of transactions result in a convergence difference as the total change in net worth under AGAAP is disclosed before transactions with owners as owners, while under GFS, transactions with owners as owners is included in the movement in GFS net worth.
- (j) The PFNC/PFC sectors report zero net worth for GFS purposes as GFS treats the ownership interest (contributed equity) as a liability.
- (k) The Australian Bureau of Statistics requires that for the calculation of the GFS cash surplus/deficit an adjustment is made to deduct the value of assets acquired using finance leases to recognise a notional cash outflow relating to new finance leases. Under AGAAP the cash flow statement does not recognise notional cash flows, as these are non-cash transactions.

1 - 150 Total State Sector Accounts

### Reclassifications

The following classification differences exist, between lines presented in this AASB 1049 report and GFS line presentations. While these classification differences do not affect the net operating results nor net worth aggregates, they result in different line presentations between GFS and the AASB1049 (ie AGAAP) reports.

- (a) New South Wales receives certain transfer payments from the Australian Government which are required to be on-passed to recipients as determined by the Australian Government. Most of these transfer payments relate to grants from the Australian Government for specific non-government schools or for local government authorities. As New South Wales has no control over the transfer payments, they are not recognised as State revenues and expenses. However, the ABS has determined that for GFS purposes the transfer payments be recognised as GFS revenues and expenses of the States and Territories. New South Wales publishes information on these excluded transfer payments as a footnote to the grants revenue and expense notes to assist users understand the full value of the amounts on-passed.
- (b) GFS requires that certain environmental levies reported by PNFCs be also recognised and grossed up in the GG sector as tax revenue and as an equivalent subsidy expense paid back to the PNFC sector, for GFS purposes only.
- (c) For Total State reporting purposes only, transport and energy subsidies paid from GGs to PNFCs for students and pensioners are eliminated from AGAAP statements. However, GFS treats the payment by the State as a gross expense, relating to a benefit paid to the household sector, and as gross revenue from the household sector for electricity sales and travel fares.
- (d) Under AGAAP, dividends accrued are a direct adjustment to equity, whereas under GFS they are reported as an expense for the PNFC and PFC sectors.
- (e) GFS requires that deferred income and deferred expenses be classified as payables and receivables. However, they are reported as other assets and other liabilities under AASB 1049 and not as receivables/payables, as there is no present obligation to repay the deferred items.
- (f) NSW excludes rental bond assets and an equal value of deposit liabilities from the AGAAP statements of financial position as they are considered to be trust monies. However, the Australian Bureau of Statistics has advised that rental bond monies are to be recognised on balance sheet for GFS purposes, and not treated off balance sheet as trust monies. This difference does not impact key fiscal aggregates, however it results in the GFS total assets and total liabilities being grossed up compared to the AGAAP aggregates.
- (g) Certain investments in associates (to multi-jurisdictional general government entities) are not recognised in GFS as equity investments, but are treated in GFS as advances. This reclassification creates a difference between GFS and AGAAP net debt, but does not affect net financial liabilities nor net worth aggregates.
- (h) Salaries accruals and certain employee on-costs reported as payables under AGAAP are required to be classified as provision liabilities for GFS reporting purposes.

# Note 38: Budgetary Information on 2010-11 General Government Sector Financial Statements

### **Analysis of the General Government Sector Results**

### **Budget Result**

	Budget \$m	Actual \$m	Variation \$m
Total Revenues	57,669	57,144	(525)
Total Expenses	56,896	55,804	(1,092)
Budget Result	773	1,340	567

The Budget result for the financial year ended 30 June 2011 was a surplus of \$1,340 million. This represented a \$567 million increase on the original 2010-11 estimate of a surplus of \$773 million. An analysis of the result compared to the original Budget (as presented in the 2010-11 Budget Papers) is outlined below.

### **Total Revenues**

Total revenues decreased by \$525 million against budget as outlined below.

	Budget	Actual	Variation
	\$m	\$m	\$m
Total Revenues			
Taxation	20,194	20,395	201
Grants and Subsidies			
Commonwealth general purpose	14,827	13,900	(927)
Commonwealth national agreements	6,817	6,860	43
Commonwealth national partnership payments	4,456	4,215	(241)
Other grants and subsidies	641	642	1
Sale of goods and services	4,584	4,658	74
Interest	325	468	143
Dividend and income tax equivalents			
from other sectors	1,705	1,982	277
Other dividends and distributions	347	430	83
Fines, regulatory fees and other	3,774	3,594	(180)
Total Revenues	57,669	57,144	(525)

#### **Taxation**

In total, taxation was \$201 million over the Budget estimate.

Government guarantee fees charged to government businesses were \$100 million lower than the Budget estimate. This is due to a change in policy that more closely replicates private sector interest rates, partly offset by lower borrowings.

Motor vehicle weight tax was \$53 million higher than the Budget estimate as a result of higher than expected revenue from the tax rate increase funding the Metropolitan Transport Blueprint.

The Electricity Tariff Equalisation Ministerial Corporation reported a net increase in funds received from retailers (\$177 million) due to national wholesale market prices being lower overall than the regulated cost component retailers charge their customers.

Payroll tax was \$57 million higher than the Budget estimate reflecting slightly higher employment growth. Land tax fell short of the 2010-11 Budget estimate due to minor differences in the timing of assessments issued.

The Workers' Compensation (Dust Diseases) Board contributions were higher than expected at Budget time (\$75 million). This outcome was largely due to an increase in outstanding future claims liabilities as estimated by the actuary. This is offset by an increase in revenue.

#### Grants and Subsidies

Grants and subsidies in total were \$1,124 million lower than Budgeted. Commonwealth general purpose payments were \$927 million lower than expected mainly due to GST revenue (\$881 million) which reflects lower Australian GST collections as a result of weaker consumption growth.

Commonwealth national agreements and Commonwealth national partnership payments were \$198 million below the Budget estimate due to delays in payments from the Commonwealth under the Elective Surgery Waiting List Reduction Plan and the Health and Hospitals Fund together with funding for the Holbrook Bypass and other Nation Building funding being received in 2009-10 rather than 2010-11.

#### Sale of Goods and Services

Sale of goods and services includes revenue from the use of government assets as well as revenue generated by agencies in their normal trading activities.

Sales of goods and services exceeded the Budget estimate by \$74 million mainly due to the Department of Transport receiving contract work for RailCorp for Barangaroo and an actuarial adjustment for personnel services of the Department of Family and Community Services.

#### Interest

Interest income includes returns on advances to public trading enterprises, returns on NSW Treasury Corporation deposits and on deposits with financial institutions.

Investment revenue improved by \$143 million over the Budget estimate largely because of higher cash balances within the Crown Finance Entity from proceeds of the electricity transaction.

#### Financial Distributions (Dividends and Income Tax Equivalents)

Dividends and income tax equivalent payments are paid by commercial Government businesses to ensure competitive neutrality with the private sector and encourage the businesses to make commercial investment decisions.

Dividends and taxes increased by \$277 million in 2010-11 largely due to higher profitability (and therefore dividends and income tax equivalents) in the energy sector along with an increase in income tax equivalent payments driven by gains on sale of the retail arms of the electricity distribution businesses.

#### Other dividends and distributions

Other dividends and distributions were \$83 million above the Budget estimate. This was mainly due to higher than expected dividends from Snowy Hydro Limited and higher returns on investments held by NSW Self Insurance Corporation and the Long Service Leave Corporation.

## Fines, Regulatory Fees and Other

Revenues from fines, regulatory fees and other revenues were \$179 million lower than Budget estimates. Mining royalties were \$528 million less than expected, largely driven by higher exchange rates and motor vehicle fines were \$98 million less than budget reflecting a slower than expected roll-out of mobile speed cameras and revised placement of warning signs.

This was offset by

- an increase in the transfer of council roads to the Roads and Traffic Authority of NSW following implementation of the NSW Road Reclassification Review (\$110 million)
- an increase in the value of of its private sector provided infrastructure assets (\$61 million)
- additional HIH recoveries received from the administrators (\$34 million), and
- an increase in asset sales costs recouped from the electricity retailers and generators (\$33 million).

#### **Expenses**

Total expenses fell by \$1.1 billion against budget as outlined below.

**NSW Police Force** expenses were \$138 million higher than budget primarily due to increases in death and disability expenses following a further update of actuarial assessment.

**NSW Rural Assistance Authority** expenses were \$88 million higher than the budget estimate. A total of \$101 million of payments to be made in 2011-12 were expensed in 2010-11 as applications for Exceptional Circumstances and Natural Disaster Relief and Recovery grants were received in late 2010-11. This was offset by an under expenditure in Exceptional Circumstances grants in 2010-11 of \$13 million.

Workers' Compensation (Dust Diseases) Board expenses were \$73 million higher than budget mainly due to an increase in outstanding future liabilities as estimated by the actuary. This is offset by an increase in revenue.

**Department of Rural Fire Service** expenses were \$57 million higher than the budget estimate due to additional expenditure related to Bushfire Hazard Mitigation initiatives and acceleration to the upgrading of the Private Mobile Radio as a result of the Victorian Bushfire Royal Commission.

**Department of Transport** expenses were \$347 million lower than the Budget estimate. This was primary due to a budgeted payment of \$350 million for the South West Rail link being brought forward and paid in 2009-10.

Crown Finance Entity expenses were \$218 million lower than the Budget estimate. This decrease was driven by a number of factors including lower superannuation costs (\$10 million), lower costs associated with the privatisation of government assets (\$44 million) and lower natural disaster costs (\$64 million). This is offset by higher payments to the Australian Tax Office for GST administration expenses (\$27 million).

NSW Self Insurance Corporation expenses were \$165 million lower than the budget estimate due to the reduction in outstanding workers' compensation liabilities following a revision to the assumptions underlying the actuarial model (\$135 million) and favourable claims experience on the public liability portfolio (\$57 million) and the Home Warranty Insurance Scheme (\$19 million). These reductions were partially offset by an increase in workers' compensation claims in NSW Police as the flow on effect of the NSW Police Death and Disability Scheme (\$49 million).

Department of Trade and Investment, Regional Infrastructure & Services expenses were \$151 million lower than the Budget estimate mainly due to lower than expected uptake of the Energy Rebate Scheme (\$45 million) and the Sustaining the Basin Farm Modernisation Project for Border Rivers-Gwydir (\$9 million), carry forward of funding to future years for the Major Investment Attraction Scheme (\$19 million), Regional Development Assistance program (\$18 million), Country Towns Water Supply and Sewerage Program (\$25 million), the Clean Coal Fund (\$18 million) and the reclassification of recurrent expenditure for the Hawkesbury Nepean River Package (\$12 million).

Minister Administering the Environmental Planning and Assessment Act expenses were lower than the Budget estimate by \$89 million. This was due to the transfer of land to other government bodies accounted for as equity transfer rather than expense.

**Department of Health** expenses were lower than the budget by \$71 million due to savings in employee related costs, depreciation expense and telecommunication costs. These were offset by increased costs for electricity, VMO cost, grants and cross border flows.

**Department of Finances and Services** expenses were lower than budgeted by \$53 million due to lower employee related costs and superannuation contributions.

**Department of Planning and Infrastructure** expenses were \$36 million lower than the Budget estimate. This was mainly due to underspend on the Comprehensive Housing Supply and Priority Infrastructure Fund. Grants were withheld from Local Government awaiting determination by the Independent Pricing and Regulatory Tribunal.

The expense increases detailed above were offset by the use of the Treasurers Advance (\$300 million), which is included as a budgeted expense within 'other operating expenses'.

# **Operating Result**

The operating result was \$2,840 million better than the Budget estimate. This was due to the \$567 million improvement on the Budget result previously discussed and a number of other gains and losses not recognised in the Budget result. Gains include:

- \$3,207 million profit on the transfer of businesses to the Private sector (mainly New South Wales retail electricity operation)
- \$106 million share of earnings from Associates mainly from Snowy Hydro Ltd.

Offsetting losses includes:-

- deferred income tax accruals from Public Trading Enterprises of \$390 million associated with Delta and Eraring
- \$232 million for impairment of receivables, including a \$143 million impairment of a one-off stamp duty assessment, which is subject to appeal in the Supreme Court
- Gains on asset disposals were \$217 million lower than budget, as assets sales previously anticipated in the 2006 Economic Financial Statement did not proceed.
- \$111 million for Roads and Traffic Authority assets written off during the year.

# **Net Lending**

Net lending was \$357 million lower than the Budget estimate primarily due to an improvement of \$567 million in the Budget result. The additional improvement is due to lower capital expenditures (\$601 million), offset by lower asset sales (\$277 million), a reversal to depreciation (\$227 million) and non-cash grant revenue.

## THE NSW GENERAL GOVERNMENT SECTOR STATEMENT OF FINANCIAL POSITION AS AT 30 JUNE 2011

	Budget	Actual	Variance

	,	- ,	-,
NET ASSETS	152,299	163,287	10,988

# Analysis of the General Government Sector Statement of Financial Position

	Budget \$m	Actual \$m	Varianc e \$m
NET WORTH			
Accumulated Funds	26,918	30,437	3,519
Reserves	125,381	132,850	7,469
TOTAL NET WORTH	152,299	163,287	10,988
	152,299	163,287	10,988
OTHER FISCAL AGGREGATES Net Debt	152,299	7,952	(4,276)

#### **Net Debt**

Net debt was \$7,952 million at 30 June 2011. This was \$4,276 million lower than the Budget estimate primarily due to the improvement in the budgeted cash result (\$750 million), the proceeds from the New South Wales electricity transactions, and the sale of Waste Service and Processing Corporation.

#### **Net Financial Liabilities**

Net financial liabilities were \$52,089 million at 30 June 2011. This was \$2,870 million higher than the Budget estimate due to an increase in the opening balance of superannuation liabilities resulting from a lower than expected investment return and discount rate for 2009-10. This was offset by the improvement in the net lending result and the electricity and WSN transactions referred to above.

#### **Net Worth**

Net worth was \$163,287 million at 30 June 2011. This was \$10,988 million higher than the Budget estimate. The improvement in net worth reflects a stronger operating result, higher equity value of the PTE/PFE sector, higher valuation of non financial assets partly offset by lower than expected superannuation gains compared to the original Budget.

## THE NSW GENERAL GOVERNMENT SECTOR STATEMENT OF CASH FLOWS FOR THE YEAR ENDED 30 JUNE 2011

Net Cash Flows from Operating Activities	4,764	5,183	419
Net Cash Flows from Investments in Non-Financial Assets	(6,549)	(6,218)	331
CASH SURPLUS/(DEFICIT)	(1,785)	(1,035)	750

<sup>(</sup>a) Not published in 2010-11 Budget Estimates.

# **Cash Result**

The cash deficit of \$1,035 million was \$750 million lower than the original Budget deficit. The improved cash result is more favourable than the change in the Budget result because:

- the Budget result includes additional non-cash expenses relating to actuarial valuations of employee and superannuation liabilities
- there are timing differences between cash and accrued dividends and tax equivalents.

# Note 39: Details of Consolidated Entities

The Total State Sector comprises the following entities and the entities that they control. Unless stated otherwise (below) the State has a full ownership interest in the controlled entities. Data was not consolidated for a number of small entities controlled by the state government (identified below with an asterisk) as they are not considered material for whole-of-government purposes. For completeness, they have been listed below as part of the State reporting entity.

Only two controlled entities have reporting dates dissimilar to the 30 June Total State Sector Accounts reporting date. The reporting dates for the Sydney Cricket and Sports Ground Trust (28 February) and the Parramatta Stadium Trust (31 December) are different as they are aligned to the sporting year associated with their primary activities. It is considered impracticable and not material to the results and financial position of the Total State Sector Accounts to attempt to align the reporting periods of these Trusts to 30 June. Accordingly the annual financial results of these two trusts for their previous year (ending February and December respectively) have been consolidated into the 30 June based Total State Sector Accounts.

- (a) The agency was abolished as a result of the Public Sector Employment and Management (Departments) Order 2011
- (b) The agency was established or restructured as a result of the Public Sector Employment and Management (Departments) Order
- (c) The agency was established as a result of amendments to the *Health Services Act 1997* effective 1 January 2011.
- (d) The State Sports Centre Trust was dissolved on 30 November 2009, and its residual net assets were transferred to the Sydney Olympic Park Authority.
- (e) Festival Development Corporation renamed Central Coast Regional Development Corporation on 3 September 2010.
- (f) The Independent Transport Safety and Reliability Regulator changed its name to Independent Transport Safety Regulator effective from 1 July 2010.

- (g) Sydney Metropolitan Development Authority was established 17 December 2010.
- (h) On the 1 March 2011 EnergyAustralia Network changed its name to Ausgrid, Integral Energy Network changed its name to Endeavour Energy, Country Energy Network changed its name to Essential Energy due to the electricity retailers transaction.
- (i) Rail Infrastructure Corporation changed its name to Country Rail Infrastructure Authority effective 1 July 2010
- (j) Transport Infrastructure Development Corporation changed its name to Transport Construction Authority effective 1 July 2010
- (k) Building and Construction Industry Long Service Payments Corporation reconstituted as Long Service Corporation effective 1 January 2011.
- (I) NSW Fire Brigades changed its name to Fire and Rescue NSW effective 1 January 2011
- (m) Controlled entities of Department of Transport
- (n) In 2010-11, the State sold the public trading enterprise business, Waste Recycling and Processing Corporation trading as WSN Environmental Solutions (WSN) to SembSita Australia Pty Ltd.
- (o) The State established the Waste Assets Management Corporation, a public trading enterprise to manage certain assets, rights and liabilities of WSN that were not sold, including the landfill sites at Belrose and Eastern Creek.
- (p) The company was incorporated effective 13 January 2011.
- (g) The Office of the Sydney Harbour Foreshore Authority was abolished in June 2010.
- (r) The Sydney Metro Division was abolished effective 1 July 2010.
- (s) Effective 28 February 2011, ownership of Rocky Point Holdings Pty Ltd, Mid West Primary Pty Ltd and Midwest Development Corporation Pty Ltd was transferred to Cobbora Holding Company Pty Ltd from Eraring Energy, Delta Electricity and Macquarie Generation respectively.

# Note 40: Key Technical Terms used in the Financial Statements

**ABS GFS Manual:** The Australian Bureau of Statistics (ABS) publication *Australian System of Government Finance Statistics: Concepts, Sources and Methods* as updated from time to time.

advances: loans acquired or made for policy purposes rather than liquidity management purposes.

cash surplus/(deficit): net cash flows from operating activities plus net cash flows from acquisition and disposal of non-financial assets less distributions paid.

comprehensive result (total change in net worth before transactions with owners as owners): net result of all items of income and expense recognised for the period. It is the aggregate of operating result and other movements in equity, other than transactions with owners as owners.

convergence difference: the difference between the amounts recognised in the financial statements compared with the amounts determined for GFS purposes as a result of differences in definition, recognition, measurement, classification and consolidation principles and rules.

#### financial asset is any asset that is:

- (a) cash;
- (b) an equity instrument of another entity;
- (c) a contractual right:
  - (i) to receive cash or another financial asset from another entity; or
  - (ii) to exchange financial assets or financial liabilities with another entity under conditions that are potentially favourable to the entity; or
- (d) a contract that will or may be settled in the entity's own equity instruments and is:
  - (i) a non-derivative for which the entity is or may be obliged to receive a variable number of the entity's own equity instruments; or
  - (ii) a derivative that will or may be settled other than by the exchange of a fixed amount of cash or another financial asset for a fixed number of the entity's own equity instruments. For this purpose the entity's own equity instruments do not include instruments that are themselves contracts for the future receipt or delivery of the entity's own equity instruments.

General Government Sector (GGS): an ABS classification of agencies that provide public services (such as health, education and police) or perform a regulatory function. Agencies in the GGS are funded in the main by taxation (directly or indirectly).

**Government Finance Statistics (GFS):** system of financial reporting developed by the International Monetary Fund and used by the Australian Bureau of Statistics to classify the financial transactions of governments and measure their impact on the rest of the economy.

**key fiscal aggregates:** balances useful for macro-economic analysis purposes, including assessing the impact of a government and its sectors on the economy. AASB 1049 prescribes: net worth, net operating balance, net lending/(borrowing), total change in net worth, and cash surplus/(deficit).

net cash flows from investments in financial assets (liquidity management purposes): cash receipts from liquidation or repayment of investments in financial assets for liquidity management purposes less cash payments for such investments. Investment for liquidity management purposes means making funds available to others with no policy intent and with the aim of earning a commercial rate of return.

net cash flows from investments in financial assets (policy purposes): cash receipts from the repayment and liquidation of investments in financial assets for policy purposes less cash payments for acquiring financial assets for policy purposes. Acquisition of financial assets for policy purposes is distinguished from investments in financial assets (liquidity management purposes) by the underlying government motivation for acquiring the assets. Acquisition of financial assets for policy purposes is motivated by government policies such as encouraging the development of certain industries or assisting citizens affected by natural disaster.

**net debt:** calculated as the sum of the following financial liabilities (deposits held, borrowings and derivatives and advances received) less the sum of the following financial assets (cash and deposits, advances paid and investments loans and placements).

net financial liabilities: calculated as total liabilities, less financial assets, other than equity in PNFCs and PFCs. This measure is broader than net debt as it includes significant liabilities other than borrowings such as superannuation and employee provisions, and insurance claim obligations.

net gain on equity investments in other sectors: comprises the net gains relating to the equity held by the GGS in other sector entities. It arises from a change in the carrying amount of net assets of the subsidiaries. The net gains are measured (in the absence of market values) based on the carrying amount of net assets/(liabilities) before elimination of intersector balances.

**net lending/(borrowing):** the financing requirement of government, calculated as the net operating balance less the net acquisition of non-financial assets. A positive result reflects a net lending position and a negative result reflects a net borrowing position.

net operating balance (net result from transactions): calculated as revenue from transactions minus expenses from transactions. It excludes gains and losses resulting from changes in price levels and other changes in the volume of assets.

net worth: an economic measure of wealth and is equal to total assets less total liabilities.

**operating result:** a measure of financial performance from the operations for the period. It is the net result of items of revenue, gains and expenses (including losses) recognised for the period, excluding those that are classified as 'other comprehensive income'.

**other economic flows:** changes in the volume or value of an asset or liability that do not result from transactions (i.e. revaluations and other changes in the volume of assets).

**Public Financial Corporations (PFC) sector:** an ABS sector classification of government controlled agencies that have one or more of the following functions:

- That of a central bank
- The acceptance of demand, time or savings deposits, or
- The authority to incur liabilities (such as insurance) and acquire financial assets in the market on their own account.

The sector is also commonly referred to as the Public Financial Enterprise (PFE) sector.

**Public Non-Financial Corporations (PNFC) sector:** an ABS sector classification of government controlled agencies where user charges represent a significant proportion of revenue, and the agencies operate within a broadly commercial orientation. The sector is also commonly referred to as the Public Trading Enterprise (PTE) sector.

**transactions:** interactions between two institutional units by mutual agreement or actions within a unit that it is analytically useful to treat as transactions, such as depreciation expense. Unlike revaluations, transactions generally reflect economic events that impact the economy.

# **End of Audited Financial Statements**

# Outcomes Report 2010 - 2011

# Uniform Presentation Framework: Outcomes Report

# **Purpose**

The Outcomes Report presents financial aggregates according to the revised Uniform Presentation Framework (UPF) agreed by the Australian Loan Council in March 2008.

The Australian Loan Council includes each state and territory Treasurer and the Australian Treasurer. It monitors public sector finances, particularly the forecast cash surplus/deficit of governments and their future financing/investing requirements. Accordingly, the objective of the UPF is to "facilitate a better understanding of individual government's budget papers and provide for more meaningful comparisons of each government's financial results and projections".

The UPF financial aggregates serve a number of purposes including:

- allowing comparisons between the financial position of Australian governments on a consistent basis
- facilitating time series comparisons since they are relatively unaffected by changes in public sector administrative structures and
- permitting an assessment of the impact of NSW public sector transactions on the economy by providing data classified by economic type.

# Relationship with other reporting

Information in the Outcomes Report is not audited, however it has been prepared consistent with the audited Total State Sector Accounts.

The format of the aggregates is based on a reporting standard set out by the Australian Accounting Standards Board – AASB1049 Whole of Government and General Government Sector Financial Reporting.

Several tables in the Outcomes Report are consistent with those reported in the Total State Sector Accounts but are repeated here for completeness.

This Outcomes Report compares for 2010-11 the published NSW Budget with the outcome for the year. Financial aggregates are published for the following government sectors:

- general government sector
- public non-financial corporation (PNFC) sector
- non financial public sector
- public financial corporation (PFC) sector.

Budget estimates for the NSW Public Financial Corporations Sector are not provided as budget data is not available. In addition to the reporting requirements, a consolidated NSW Total State Public Sector Statement of Financial Position by sector (Table 1) has been included. This assists in analysis of the Statement of Financial Position for the Total State Sector.

6 - 2 Outcomes Report

Since the time the budget was prepared, some disclosures have been refined to provide further information. Where appropriate, budget amounts have been reclassified to report information consistent with the outcome presentation as well as to correct for any misclassifications.

# **Loan Council Reporting**

Table 19 compares the NSW Loan Council Allocation (LCA) estimate at the time of the Budget with the result for 2010-11.

As confirmed at the 1997 Loan Council meeting, governments are to report their full contingent exposure to infrastructure projects with private sector involvement. Exposure is to be measured by the Government's termination liabilities and disclosed as a footnote to, rather than as a component of LCAs

Table 19 shows a LCA outcome for 2010-11 of \$0.7 billion compared with the Budget-time estimate of \$7.4 billion. The result exceeds the tolerance limit of \$1.5 billion.

The main reason for the change between the budget time estimate and the outcome is the recognition of the \$4 billion proceeds from sale of the retail electricity businesses and the sale of WSN Environmental Solutions. It is not customary to present these transactions in budget estimates for commerciality reasons.

The memorandum items included in the LCA were impacted by an increase in superannuation reserves. This was because benefit payments were lower than expected and investment earnings were slightly higher than expected. The actual superannuation earning rate was 10.1 per cent, 1.5 per cent higher than the 8.6 per cent estimate at budget time.

Table 11: NSW Public Non-Financial Corporation Sector Statement of Financial Position at 30 June (cont)

	2011 \$m	2011 \$m
	(Budget)	(Ac tual)
Net Worth		
Accumulated Funds	41,420	44,346
Reserves	35,885	40,776
TOTAL NET WORTH	77,305	85,122
OTHER FISCAL AGGREGATES		
Net Financial Worth (c)	(41,680)	(36,694)
Net Debt (d)	30,316	24,437
Net Financial Liabilities <sup>(e)</sup>	41,680	36,694

<sup>(</sup>a) This table has been presented on a liquidity basis as per AASB 1049.

<sup>(</sup>b) Superannuation liabilities are reported net of prepaid contribution assets.

<sup>(</sup>c) Net financial worth equals total financial assets minus total liabilities.

<sup>(</sup>d) Net Debt equals the sum of deposits held, advances received and borrowing, minus the sum of cash, advances paid, and financial assets at fair value.

<sup>(</sup>e) Net financial liabilities equals total liabilities minus total financial assets.

6 - 29 **Outcomes Report** 

<sup>(</sup>a) This table has been presented on a liquidity basis as per AASB 1049.
(b) Superannuation liabilities are reported net of prepaid contribution assets.
(c) Net financial worth equals total financial assets minus total liabilities.

<sup>(</sup>d) Net Debt equals the sum of deposits held, advances received and borrowings, minus the sum of cash, advances paid and financial assets at fair value.

Net financial liabilities equals total liabilities less total financial assets excluding equity investments in other public sector entities.

6 - 36 **Outcomes Report** 

Table 19: 2010-11 Loan Council Allocation Estimates for NSW

	Budget-time Estimate 2010-11 \$m	Actual 2010-11 \$m
General government sector cash (surplus) / deficit	1,785	1,035
PNFC sector cash (surplus) / deficit (a)	4,616	3,805
Non-financial public sector cash (surplus) / deficit (b)	6,401	4,841
Acquisitions under finance leases and similar arrangements (c)	698	188
Equals ABS GFS cash (surplus) / deficit	7,100	5,029
Minus Net cash flows from investments in financial		
asset for policy purposes (d)	(186)	3,879
Plus Memorandum items (e)	96	(496)
Loan Council Allocation (LCA)	7,382	654

#### Notes:

- (a) Public Non-financial Corporation (PNFC) Sector.
- (b) Does not directly equate to the sum of the General Government and PNFC cash deficits due to intersectoral transfers which are netted out
- (c) Finance leases and similar arrangements are shown separately as they are deducted from the AASB 1049 cash surplus to derive the ABS GFS cash surplus/deficit.
- (d) This item is the negative of net advances paid under a cash accounting framework.
- (e) Memorandum items are used to adjust the ABS deficit to include in LCAs certain transactions, such as operating leases, that have many of the characteristics of public sector borrowings but do not constitute formal borrowings. They are also used, where appropriate, to deduct from the ABS deficit certain transactions that Loan Council has agreed should not be included in LCAs - for example, the funding of more than employers' emerging costs under public sector superannuation schemes, or borrowings by entities such as statutory marketing authorities.

### **Private Sector Infrastructure**

As confirmed at the 1997 Loan Council meeting, governments are to report their full contingent exposure to infrastructure projects with private sector involvement. Exposure is to be measured by the government's termination liabilities in a case of private sector default and disclosed as a footnote to, rather than a component of, Loan Council Allocations.

## Contracts entered into in 2010-11.

None to be reported.
